

LC662104A, 662106A, 662108A

Four-Bit Single-Chip Microcontrollers with 4, 6, and 8 KB of On-Chip ROM

Overview

The LC662104A, LC662106A, and LC662108A are 4-bit CMOS microcontrollers that integrate on a single chip all the functions required in a special-purpose telephone controller, including ROM, RAM, I/O ports, a serial interface, a DTMF generator, timers, and interrupt functions. These microcontrollers are available in a 30-pin package.

Features and Functions

- On-chip ROM capacities of 4, 6, and 8 kilobytes, and an on-chip RAM capacity of 384×4 bits.
- Fully supports the LC66000 Series common instruction set (128 instructions). (The special-purpose instructions for TM1 and SI/01 are disabled.)
- I/O ports: 24 pins
- DTMF generator
This microcontroller incorporates a circuit that can generate two sine wave outputs, DTMF output.
- 8-bit serial interface: one circuit
- Instruction cycle time: 0.95 to 10 μ s (at 3.0 to 5.5 V)
- Powerful timer functions and prescalers
 - Time limit timer, event counter, pulse width measurement, and square wave output using a 12-bit timer.
 - Time base function using a 12-bit prescaler.
- Powerful interrupt system with 6 interrupt factors and 6 interrupt vector locations.
 - External interrupts: 3 factors/3 vector locations
 - Internal interrupts: 3 factors/3 vector locations
- Flexible I/O functions
Selectable options include 20-mA drive outputs, pull-up and open drain circuits.
- Optional runaway detection function (watchdog timer)
- 8-bit I/O functions
- Power saving functions using halt and hold modes.
- Packages: DIP30SD, MFP30S
- Evaluation ICs: LC665099 (evaluation chip) + EVA86K - ECB662500
LC66E2108(on-chip EPROM microcontroller)

 CMOS output: Complementary output.
 OD output: Open-drain output.

User Options

1. Port 0, 1, 4, and 5 output level options a reset

The output levels at reset for I/O ports 0, 1, 4, and 5 in independent 4-bit groups, can be selected from the following two options.

Option	Conditions and notes
Output high at reset	The four bits of ports 0, 1, 4, or 5 are set in a group
Output low at reset	The four bits of ports 0, 1, 4, or 5 are set in a group

2. Oscillator circuit options

- Main clock

Option	Circuit	Conditions and notes
External clock		The input has Schmitt characteristics
Ceramic oscillator		

Note: There is no RC oscillator option.

3. Watchdog timer option

A runaway detection function (watchdog timer) can be selected as an option.

4. Port output type options

- The output type of each bit (pin) in ports P0, P1, P2, P3 (except for the P33/ $\overline{\text{HOLD}}$ pin), P4, and P5 can be selected individually from the following two options.

Option	Circuit	Conditions and notes
Open-drain output		The port P2, P3, P5, and P6 inputs have Schmitt characteristics.
Output with built-in pull-up resistor		The port P2, P3, and P5 inputs have Schmitt characteristics. The CMOS outputs (ports P2 and P3) and the pull-up MOS outputs (P0, P1, P4, and P5) are distinguished by the drive capacity of the p-channel transistor.

- Note: 1. With the output Nch transistor off in shared I/O ports with the open-drain output specifications. These pins cannot be used as input pins if the CMOS output specifications are selected.
 2. With the output Nch transistor off in shared I/O ports with the open-drain output specifications. The rating for the pull-up output specification pins is stipulated in terms of the output pull-up current IPO. These pins cannot be used as input pins if the CMOS output specifications are selected.
 3. With the output Nch transistor off for CMOS output specification pins.
 4. With the output Nch transistor off for pull-up output specification pins.
 6. With the output Pch transistor off for open-drain output specification pins.

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
