

8-Channel Serial to Parallel Converter with High Voltage Push-Pull Outputs, POL, Hi-Z, and Short Circuit Detect

Features

- □ HVCMOS, technology
- Operating output voltage of 250V
- Low power level shifting from 5V to 250V
- Shift register speed 8MHz @ V_{DD}=5V
- 8 latch data outputs
- Output polarity and blanking
- CMOS compatible inputs
- Output short circuit detect
- Output high-Z control

Applications

- Piezoelectric transducer driver
- Weaving applications
- Braille
- **Printers**
- MEMs

Displays

Top Block Diagram

General Description

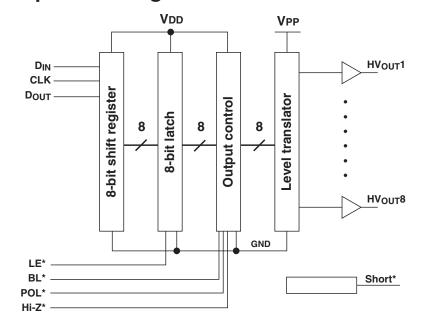

The HV513 is a low voltage serial to high voltage parallel converter with 8 high voltage push-pull outputs. This device has been designed to drive small capacitye loads such as piezoelectric transducers. It can also be used in any application requiring multiple high voltage outputs, with medium current source and sink capabilities.

The device consists of an 8-bit shift register, 8 latches, and control logic to perform the polarity select and blanking of the outputs. Data is shifted through the shift register on the low to high transition of the clock. A data output buffer is provided for cascading devices. Operation of the shift register is not affected by the /LE, /BL, /POL, or the /HI-Z control inputs. Transfer of data from the shift register to the latch occurs when the /LE is high. The data in the latch is stored when /LE is low. A high-Z, /HI-Z, pin is provided to set all the outputs in a high-Z state.

All outputs have short circuit protection that detects if the outputs have reached the required output state. If output does not track the required state, then the /SHORT pin will be low. This output will pulse low during the output transistion period under normal operation; see SC Timing Diagram for details.

All outputs will have a break-before-make circuitry to reduce cross-over current during output state changes.

Note: All logic control inputs have internal 20k-ohm pull-up resistors.

t _{DLH}	Delay time clock to D _{OUT} low to high			110	ns	C _L =15pF
t _R , t _F	All logic inputs			5	ns	
t _{sd}	Output short circuit detection			500	ns	Short to output fall of /SHORT, C _L =15pF
t _{sc}	Output short circuit clear			1000	ns	Short clear to output rise of /SHORT
t _{HI-Z}	Output high-Z state			500	ns	

Absolute Maximum Ratings*

Supply Voltage, V _{DD}	-0.5V to 6V
Supply Voltage, V _{PP}	V _{DD} to 275V
Logic input levels	-0.5V to $V_{\rm DD}$ +0.5V
Ground current	0.3A
High voltage supply current	0.25A
Continuous total power dissipation	750mW
Operating temperature range	-40°C to +85°C
Storage temperature range	-65°C +150°C

^{*} All voltages are referenced to device ground.

Ordering Information

Device	Part Number	Package		
HV513	HV513WG	24 Lead SOW		

Operating Supply Voltages

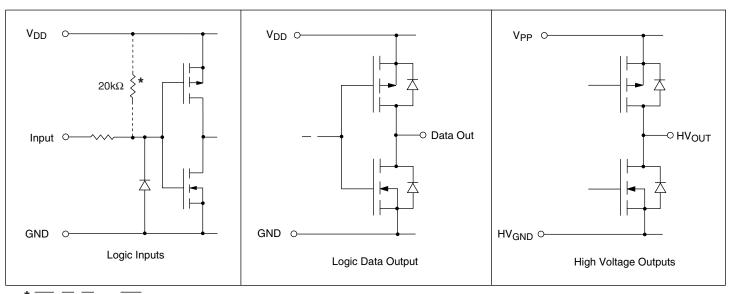

Symbol	Parameter	Min	Тур	Max	Units	Conditions
V _{DD}	Logic supply voltage	4.5	5.0	5.5	V	
V _{PP}	High voltage supply	30		250	V	Note 1
V _{IH}	High-level input voltage	V _{DD} -0.9		V _{DD}	V	
V _{IL}	Low-level input voltage	0		0.9	V	
T _A	Operating free-air temperature	-40		+85	° C	

Notes

- 1. Below minimum $\boldsymbol{V}_{_{\boldsymbol{PP}}}$ the output may not switch.
- 2. Power-up sequence should be the following:
 - 1. Connect ground.
 - 2. Apply V_{DD} .
 - 3. Set all inputs (Data, CLK, Enable, etc.) to a known state.
 - 4. Apply V_{PP}.

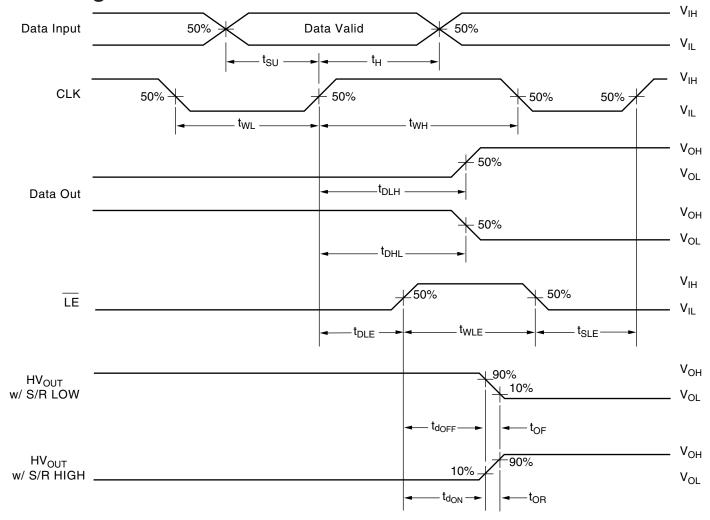

Power-down sequence should be the reverse of the above.

Input and Output Equivalent Circuits

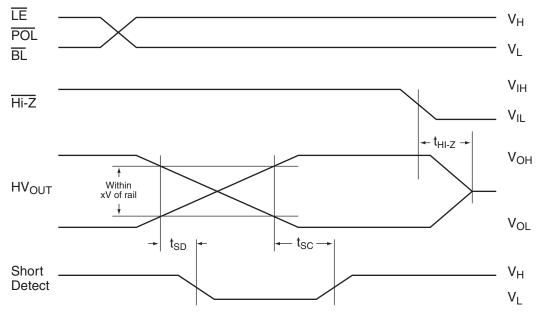

^{*} \overline{POL} , \overline{BL} , \overline{LE} , and $\overline{HI-Z}$

Switching Waveforms

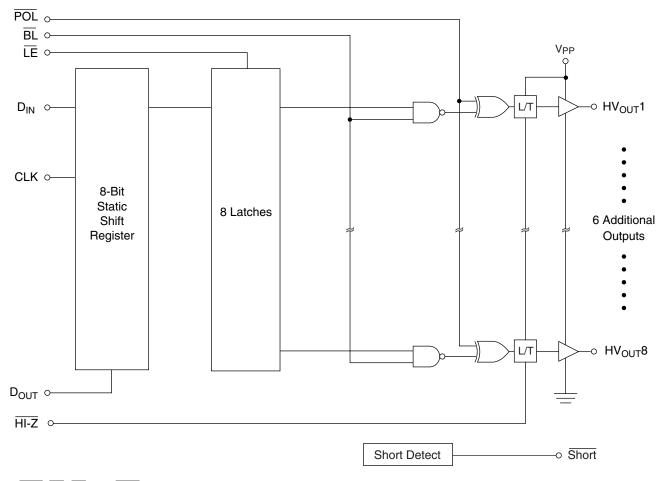

Short Circuit Detect Detail Timing (HV513)

If the output is not within 5V to 10V of the desired output state, the SHORT signal goes LOW.

Functional Block Diagram

 \overline{POL} , \overline{BL} , \overline{LE} , and $\overline{HI-Z}$ have internal $20k\Omega$ pull-up resistors.
