

## ■ FEATURES

- 3V to 30V Input Voltage Operation.
- Internal 1.6A Peak Current Switch.
- Internal  $\pm 1.8\%$  Reference.
- Low Quiescent Current at 1.6mA.
- Frequency Operation from 100Hz to 100KHz.
- Current Limiting.

## ■ APPLICATIONS

- Saver for Cellular phones
- DC-DC Converter Module

## ■ DESCRIPTION

The MC34063A by Analog Integrations Corporation, an improved second source over the industrial standard MC34063A, is a monolithic control circuit containing the primary functions required for DC/DC converters. The device consists of an internal temperature compensated reference, comparator, controlled duty cycle oscillator with an active current limit circuit, driver and high current output switch. This device is specifically designed to be incorporated in step-down, step-up and voltage-inverting applications with a minimum number of external components. The  $\pm 1.8\%$  internal reference and low quiescent current of 1.6mA are among the improvements of the device over the competition.

$V_{SAT}$  = Saturation voltage of the output switch.  
 $V_F$  = Forward voltage drop of the ringback rectifier

The following power supply characteristics must be chosen:

$V_{IN}$  - Nominal input voltage.  
 $V_{OUT}$  - Desired output voltage,  
 $|V_{OUT}| = 1.25 (1 + RB/RA)$   
 $I_{OUT}$  - Desired output current.

$F_{MIN}$  - Minimum desired output switching frequency at the selected values for  $V_{IN}$  and  $I_{OUT}$ .

$V_{RIPPLE\ (P-P)}$  - Desired peak-to-peak output ripple voltage. In practice, the calculated value will need to be increased due to the capacitor equivalent series resistance and board layout. The ripple voltage should be kept to a low value since it will directly effect the line and load regulation.
