CMOS LSI

LC7527E

Graphic Equalizer System

Overview

The LC7527E is a microprocessor controllable seven-band graphic equalizer LSI that does not require the use of external semiconductor inductors (simulated inductors).

Functions

- Left and right channel seven-band graphic equalizers
- Each band operates in ±2 dB steps.
- Each band has a maximum boost of +12 dB and a maximum cut of –12 dB for a total of 13 settings.
- Independent left and right channel operation
- Serial data input supports CCB format communications with the system controller.
- CMOS LSI with a 12 V breakdown voltage

Features

- This LSI, in conjunction with a control microprocessor, can implement in two chips, an electronic graphic equalizer with the following features.
  - — One touch gain control for each band
  - — One touch memory setting recall allows users to select desired frequency characteristics for each track.
  - — Since the LC7527E includes band filter amplifiers on chip, capacitors are the only external components required in application systems.
  - — Minimal switching noise due to the use of a Silicon gate CMOS process.

- **CCB is a trademark of SANYO ELECTRIC CO., LTD.**
- **CCB is SANYO's original bus format and all the bus addresses are controlled by SANYO.**

Specifications

Absolute Maximum Ratings at Ta = 25°C, V_{SS} = 0 V

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V_{DD}-V_{EE} max	AV_{DD}, AV_{EE}, DV_{DD}, DV_{EE}*	12	V
Maximum input voltage	V_{IN} max1	CL, DI, CE	V_{SS} – 0.3 to V_{DD} + 0.3	V
	V_{IN} max2	LIN1, LIN2, RIN1, RIN2	V_{EE} – 0.3 to V_{DD} + 0.3	V
	V_{IN} max3	S1	V_{EE} – 0.3 to V_{DD} + 0.3	V
Allowable power dissipation	Pd max	Ta ≤ 85°C	280	mW
Operating temperature	Topr		–40 to +85	°C
Storage temperature	Tstg		–50 to +125	°C

Note: * –6 V ≤ V_{EE} ≤ V_{SS} ≤ V_{DD}

Allowable Operating Ranges at Ta = 25°C, V_{SS} = 0 V

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Supply voltage	V_{DD}	AV_{DD}, DV_{DD}		5		V
	V_{EE}	AV_{EE}, DV_{EE}		–5		V
	V_{DD}-V_{EE}	AV_{DD}, AV_{EE}, DV_{DD}, DV_{EE}	8.0		11.0	V
Input high level voltage	V_{IH}	CL, DI, CE	3.0		V_{DD}	V
Input low level voltage	V_{IL}	CL, DI, CE	V_{SS}		1.0	V
Input amplitude voltage	V_{IN}1	LIN1, LIN2, RIN1, RIN2	V_{EE}		V_{DD}	Vp-p
	V_{IN}2	S1	V_{EE}		V_{DD}	V
Clock pulse width	$t_{øW}$	CL	1			µs
Setup time	tsetup	CL, DI, CE	1			µs
Hold time	t_{HOLD}	CL, DI, CE	1			µs
Operating frequency	fopg	CL			500	kHz

Electrical Characteristics at Ta = 25°C, V_{DD} = 5 V, V_{EE} = –5 V, V_{SS} = 0 V

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Total harmonic distortion	THD (1)	V_{OUT} = 1 Vrms, FLAT, f = 20 kHz		0.01	0.05	%
	THD (2)	V_{OUT} = 1 Vrms, FLAT, f = 1 kHz		0.001	0.005	%
	THD (3)	V_{OUT} = 300 mVrms, FLAT, f = 20 kHz with all bands at full boost		0.042	0.2	%
	THD (4)	V_{OUT} = 300 mVrms, FLAT, f = 1 kHz with all bands at full boost		0.045	0.2	%
Crosstalk	CT	V_{OUT} = 1 Vrms, f = 20 kHz, FLAT, Rg = 1 kΩ		58		dB
Setting error	ΔB	with other bands flat	–2		+2	dB
Current drain	I_{DD}	V_{DD}-V_{EE} = 11 V			30	mA
Analog switch off leakage current	I_{OFF}	LIN1, LIN2, RIN1, RIN2			10	µA

Pin	Pin No.	Circuit type	Function
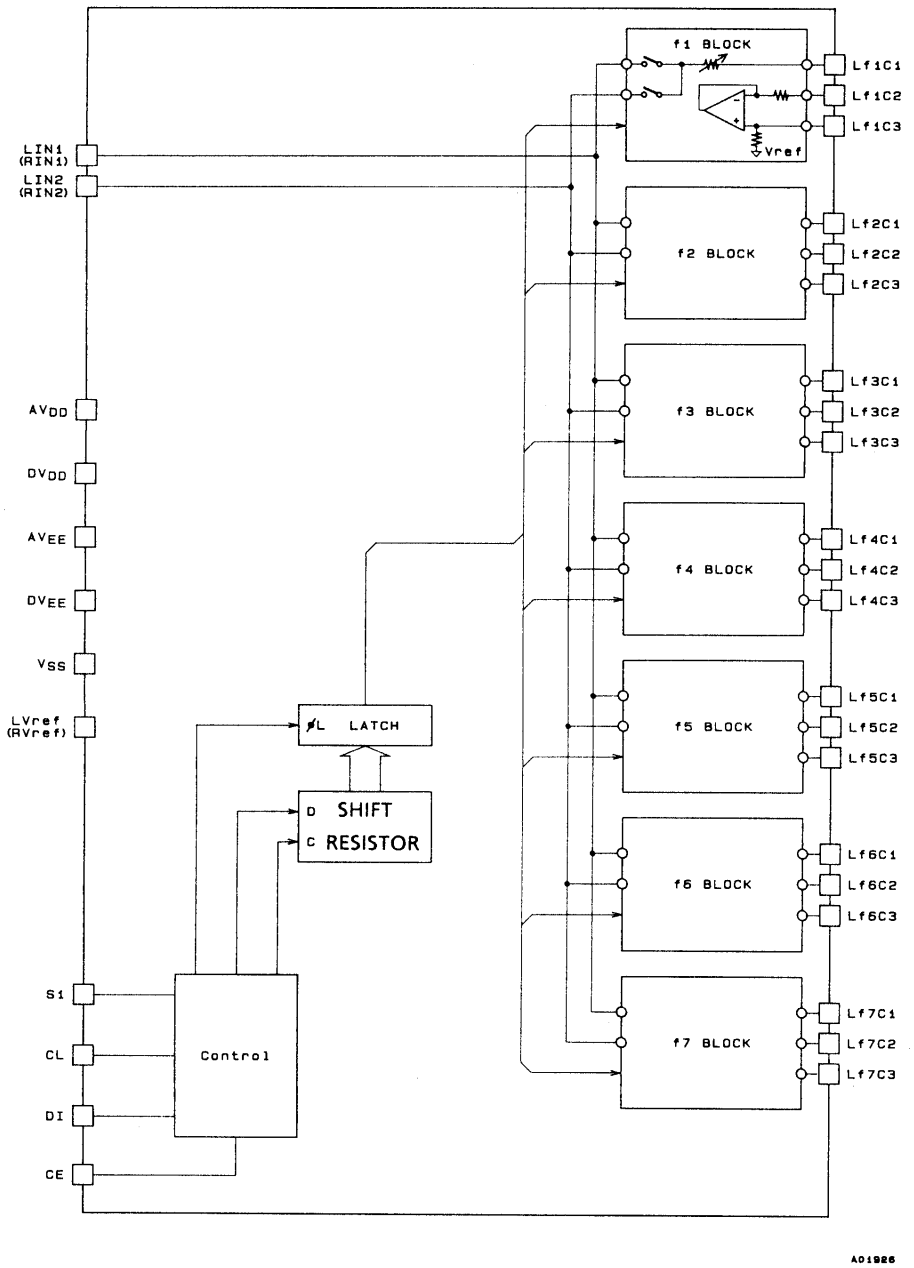
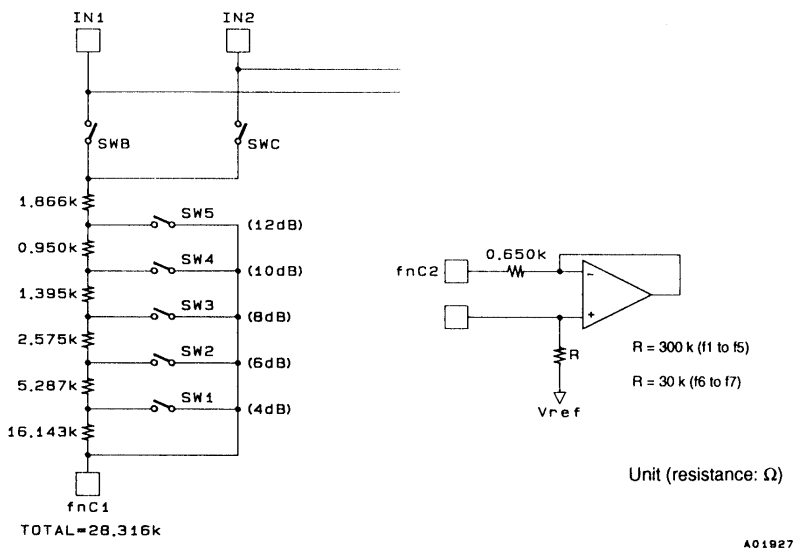
LVref RVref	58 55		Power supply: Analog ground The impedance of the pattern connected to these pins should be kept as low as possible. LVref and RVref are not connected to the V_{SS} pin.
LIN1 LIN2	59 60		Left channel audio signal input IN1 is normally connected to an operational amplifier inverting input. IN2 is normally connected to an operational amplifier non-inverting input.
RIN1 RIN2	54 53		Right channel audio signal input IN1 is normally connected to an operational amplifier inverting input. IN2 is normally connected to an operational amplifier non-inverting input.
CE	27		Chip enable input. Internal data is latched when this pin goes from high to low and the analog switches operate. Data transfers are enabled when this pin is high.
CL	25		Clock input. Schmitt inverter input circuit
DI	26		Data input. Schmitt inverter input circuit
S1	24		Dual chip system chip select input. By connecting S1 (this pin) to either V_{DD} or V_{EE}, data input is enabled when the address matches the corresponding address listed below. S1 = V_{DD} → Address: 8C S1 = V_{EE} → Address: 8D
NC NC NC NC NC NC NC	16 20 21 29 33 52 61		No connection. Do not connect signals to these pins.

Equivalent Circuit

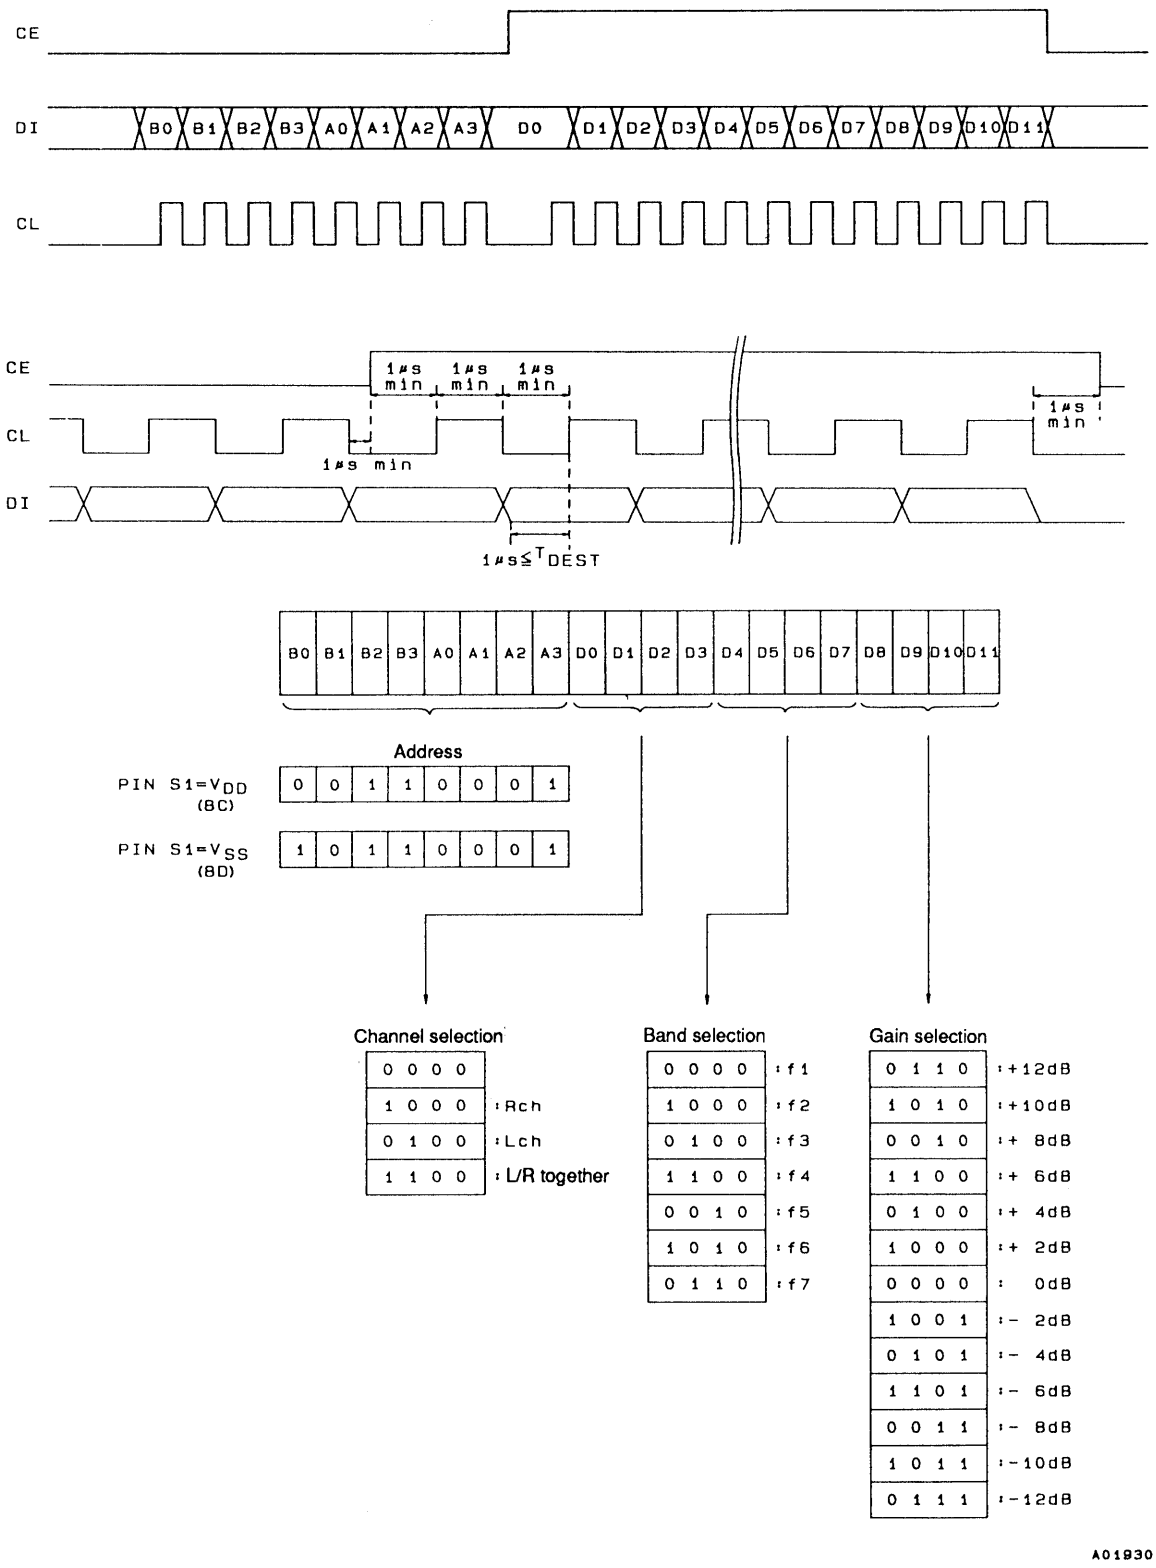


Internal Equivalent Circuit (for a single band)

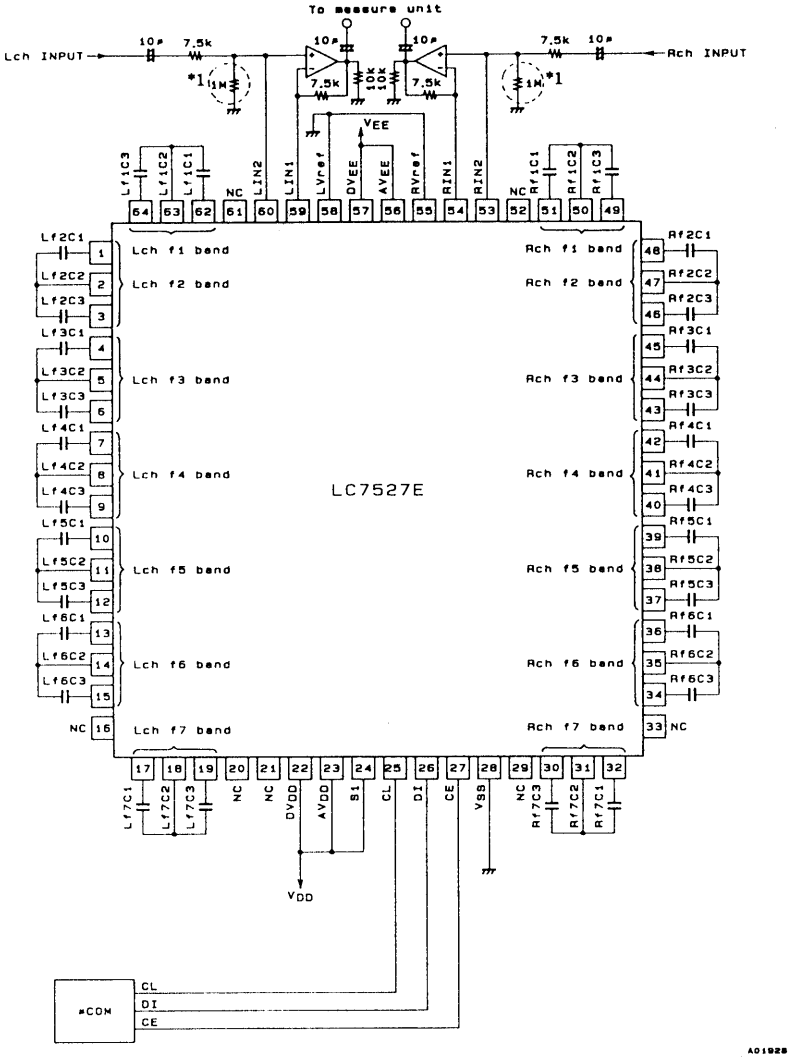


Data Input

The LC7527E is controlled by inputting stipulated data using the CE, CL, and DI pins. The data has a total of 20 bits, of which eight are address and 12 are data.



Sample Application Circuit



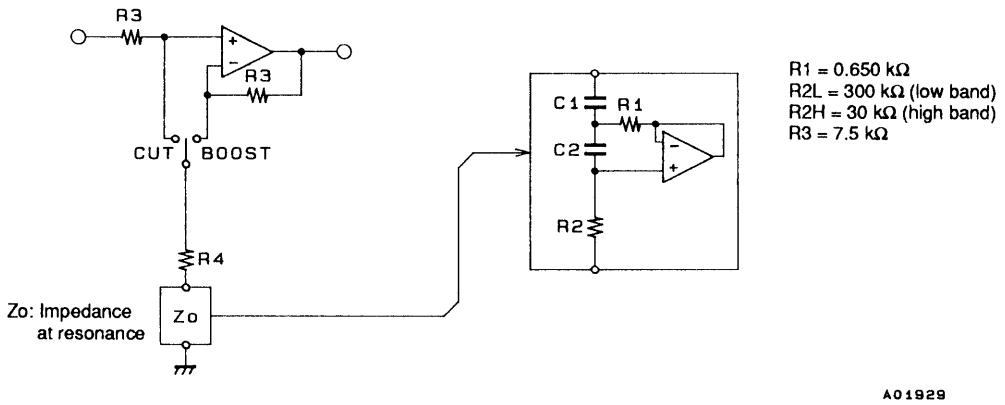
Unit (resistance: Ω, capacitance: F)

Note: If at all possible, use bipolar capacitors for all capacitors that do not have a polarity specified.
*1. A resistor of about 100 kΩ is recommended if impulse noise (popping sounds) is a problem.

External Component Value Calculations

The external capacitors required for each band in the LC7527E are the structural elements in semiconductor inductors (simulated inductors). The remainder of this section presents the equivalent circuits and the formulas used to determine the center frequencies.

1. Semiconductor Inductor Equivalent Circuit
   The LC7527E provides circuits with differing constants for the low and high bands.



2. Calculation Example
   Specifications: 1) Center frequency: Fo = 63 Hz
   2) Q at maximum boost: $Q_{+12\ dB} = 1.05$

   • Derive the sharpness Qo of the semiconductor inductor itself.
   $Qo = \frac{(R1 + R4)}{R1} \times Q_{+12\ dB} \approx 4.064$ See the internal equivalent circuit figure for R4.

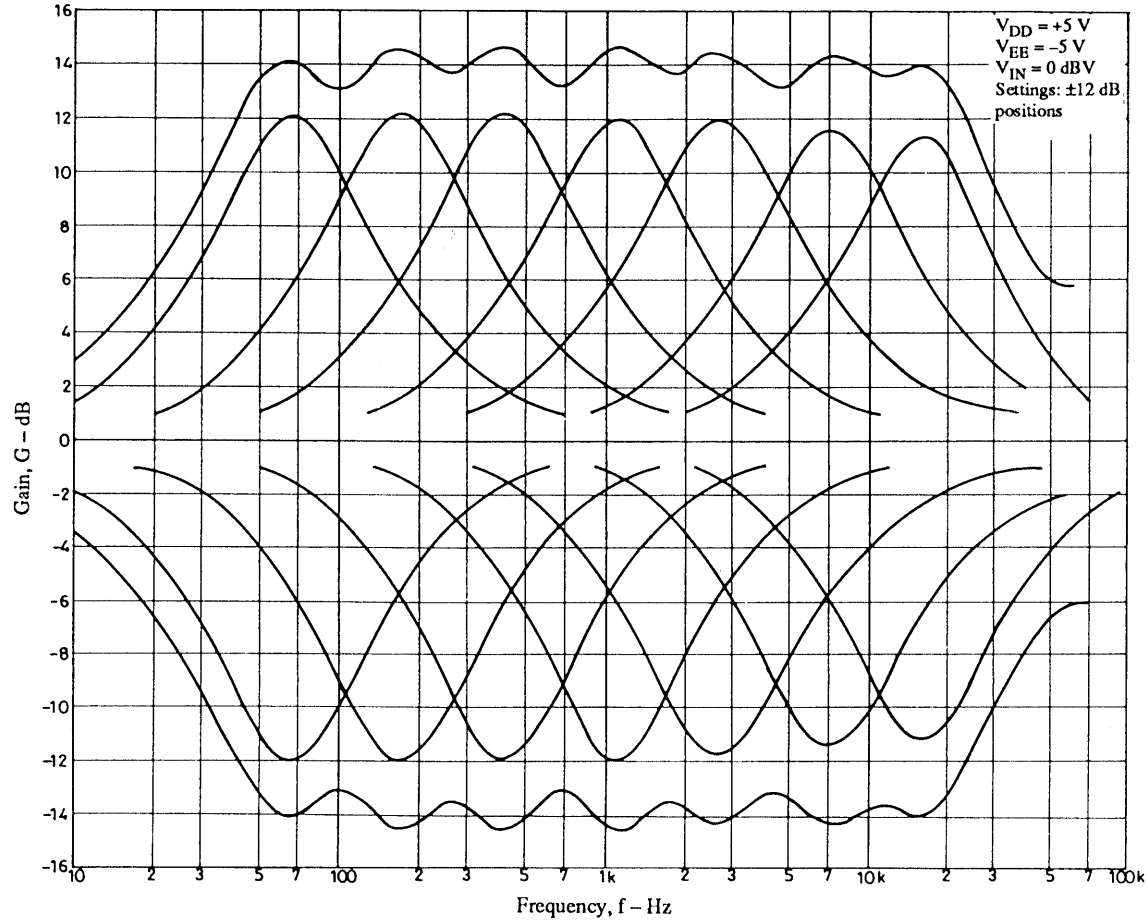
   • Derive C1.
   $C1 = 1/2\pi FoR1Qo \neq 0.953\ (\mu F)$

   • Derive C2.
   $C2 = Qo/2\pi FoR2 \neq 0.034\ (\mu F)$

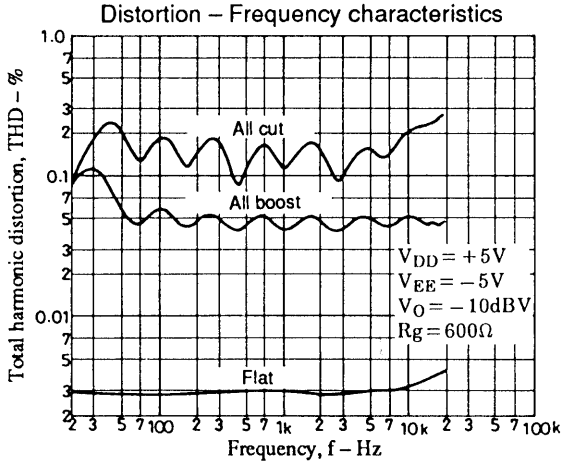
3. Sample Values for C1 and C2

Center frequency Fo (Hz)	C1 (F)	C2 (F)
63	0.953 µ	0.034 µ
160	0.377 µ	0.014 µ
400	0.151 µ	5390 p
1000	0.060 µ	2156 p
2500	0.024 µ	862 p
6300	9563 p	3422 p
16000	3765 p	1348 p

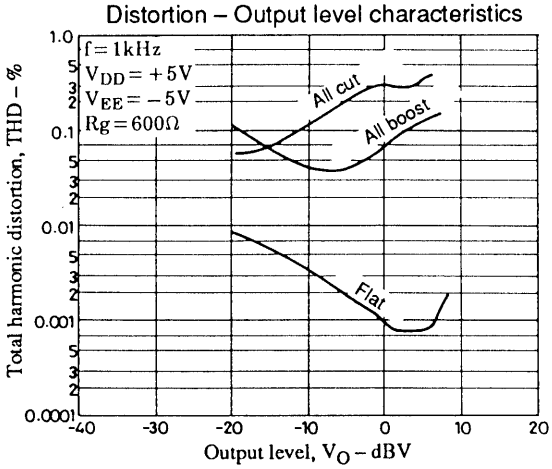
fo (center frequency) characteristics



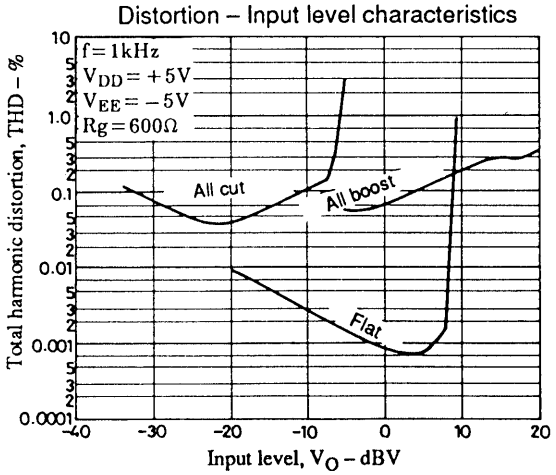
Distortion – Frequency characteristics



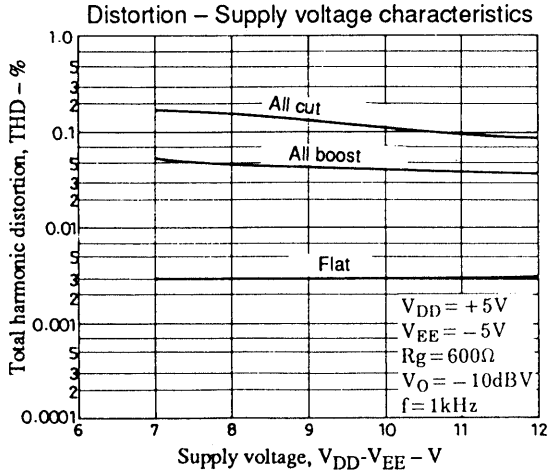
Distortion – Output level characteristics



Distortion – Input level characteristics



Distortion – Supply voltage characteristics



Usage Notes

1. The states of the internal analog switches are undefined when power is first applied. System output should be muted until control data has been sent to the LC7527E.

2. To prevent the high frequency digital signals associated with data transfers over the CL, CI, and DI pins from generating interference in the analog signals, either guard those lines with a ground pattern or use shielded cables.
