

1A Low Dropout Voltage Regulator

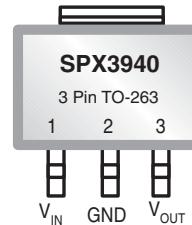

Fixed Output, Fast Response

FEATURES

- 1% Output Accuracy SPX3940A
- Guaranteed 1.5A Peak Current
- Low Quiescent Current
- Low Dropout Voltage of 280mV at 1A
- Extremely Tight Load and Line Regulation
- Extremely Fast Transient Response
- Reverse-battery Protection
- Internal Thermal Protection
- Internal Short Circuit Current Limit
- Replacement for LM3940
- Standard SOT-223, TO-220 and TO-263 packages

APPLICATIONS

- Powering VGA & Sound Card
- Automotive Electronics
- LCD Monitors
- Cordless Telephones
- Power PC™ Supplies

Now Available in Lead Free Packaging

- SMPS Post-Regulator
- Laptop, Palmtop, and Notebook Computer
- High Efficiency Linear Power Supplies
- Portable Instrumentation
- Constant Current Regulators

DESCRIPTION

The SPX3940 is a 1A, accurate voltage regulators with a low drop out voltage of 280mV(typical) at 1A. These regulators are specifically designed for low voltage applications that require a low dropout voltage and a fast transient response. They are fully fault protected against over-current, reverse battery, and positive and negative voltage transients.

The SPX3940 is offered in 3-pin SOT-223, TO-220 & TO-263 packages. For a 3A version, refer to the SPX29300 data sheet.

TYPICAL APPLICATIONS CIRCUIT

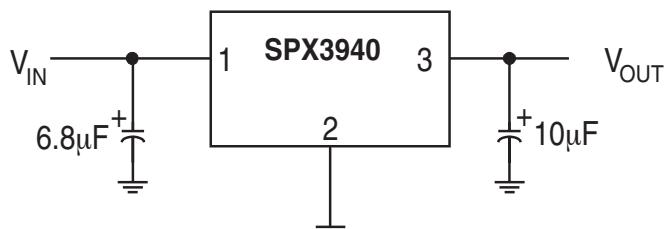

Figure 1. Fixed Output Linear Regulator.

ABSOLUTE MAXIMUM RATINGS

| | |
|---|-----------------|
| Lead Temperature (soldering, 5 seconds) | 260°C |
| Storage Temperature Range | -65°C to +150°C |
| Operating Junction Temperature Range | -40°C to +125°C |
| Input Voltage (Note 5) | 16V |

ELECTRICAL CHARACTERISTICS

At $V_{IN}=V_{OUT}+1V$ and $I_{OUT} = 10 \text{ mA}$, $C_{IN} = 6.8 \mu\text{F}$, $C_{OUT} = 10 \mu\text{F}$; $T_A = 25^\circ\text{C}$, unless otherwise specified.
The Boldface applies over the junction temperature range. Adjustable versions are set at 5.0V.

NOTES:

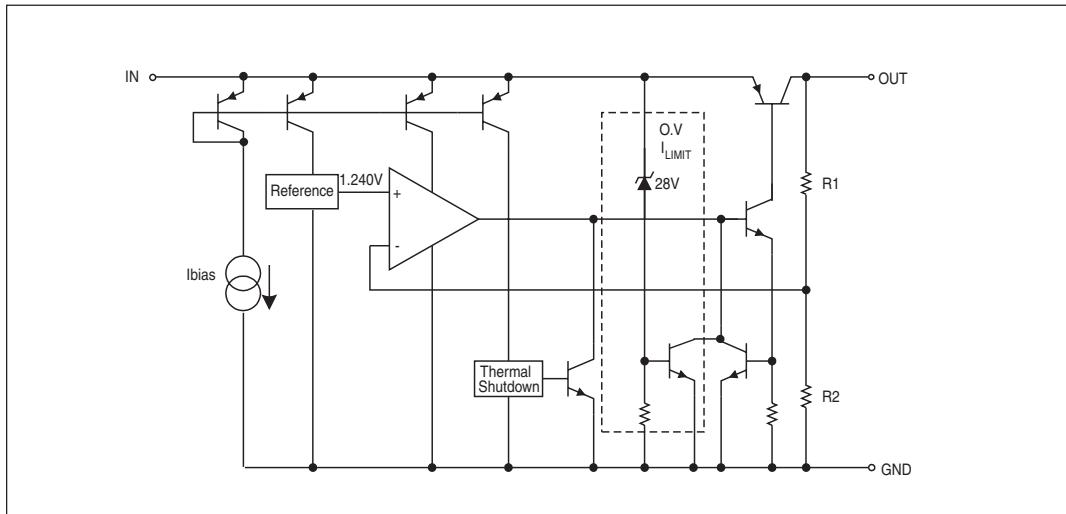

Note 1: Dropout voltage is defined as the input to output differential when the output voltage drops to 99% of its normal value.

Note 2: $V_{IN}=V_{OUT}$ (NOMINAL) + 1V. For example, use $V_{IN}=4.3 \text{ V}$ for a 3.3V regulator. Employ pulse-testing procedures to minimize temperature rise.

Note 3: Ground pin current is the regulator quiescent current. The total current drawn from the source is the sum of the load current to the ground current.

Note 4: Thermal regulation is defined as the change in the output voltage at a time T after a change in power dissipation is applied, excluding load or line regulation effects.

Note 5: Maximum positive supply voltage of 20V must be of limited duration (<100ms) and duty cycle (<1%). The maximum continuous supply voltage is 16V.

The SPX3940 incorporates protection against over-current faults, reversed load insertion, over temperature operation, and positive and negative transient voltage.

Thermal Considerations

Although the SPX3940 offers limiting circuitry for overload conditions, it is still necessary to insure that the maximum junction temperature is not exceeded in the application. Heat will flow through the lowest resistance path, the junction-to-case path. In order to insure the best thermal flow of the component, proper mounting is required. Consult heatsink manufacturer for thermal resistance and design of heatsink.

For example, TO-220 design:

Assume that $V_{IN} = 10V$, $V_{OUT} = 5V$, $I_{OUT} = 1.5A$, $T_A = 50^\circ C/W$, $\theta_{HA} = 1^\circ C/W$, $\theta_{CH} = 2^\circ C/W$, and $\theta_{JC} = 3^\circ C/W$.

Where TA = ambient temperature

θ_{HA} = heatsink to ambient thermal resistance

θ_{CH} = case to heatsink thermal resistance

θ_{JC} = junction to case thermal resistance

The power calculated under these conditions is:
 $P_D = (V_{IN} - V_{OUT}) * I_{OUT} = 7.5W$.

And the junction temperature is calculated as

$$T_J = T_A + P_D * (\theta_{HA} + \theta_{CH} + \theta_{JC}) \text{ or}$$

$$T_J = 50 + 7.5 * (1 + 2 + 3) = 95^\circ C$$

Reliable operation is insured.

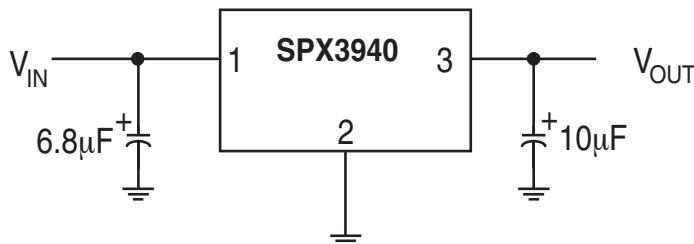

Figure 18. Fixed Output Linear Regulator.

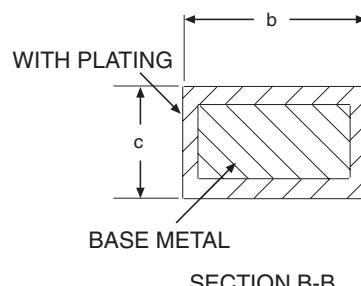

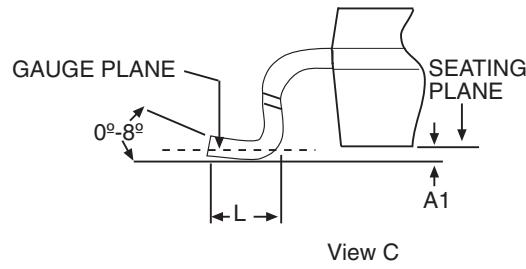

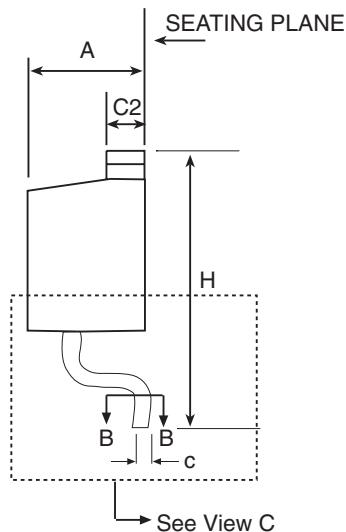

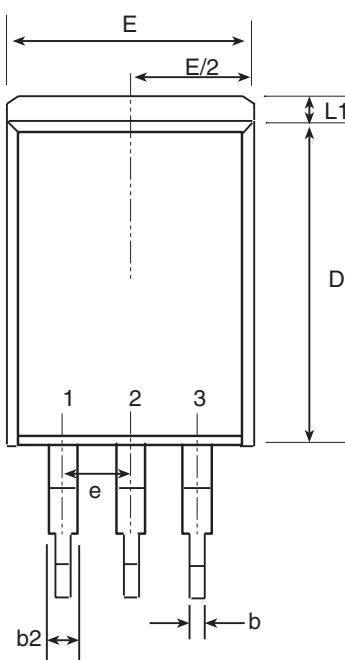

Capacitor Requirements

The output capacitor is needed to insure stability and minimize the output noise. The value of the capacitor varies with the load. However, a minimum value of $10\mu F$ aluminum capacitor will guarantee stability over all load conditions. A tantalum capacitor is recommended if a faster load transient response is needed.

If the power source has a high AC impedance, a $0.1\mu F$ ceramic capacitor between input & ground is recommended.

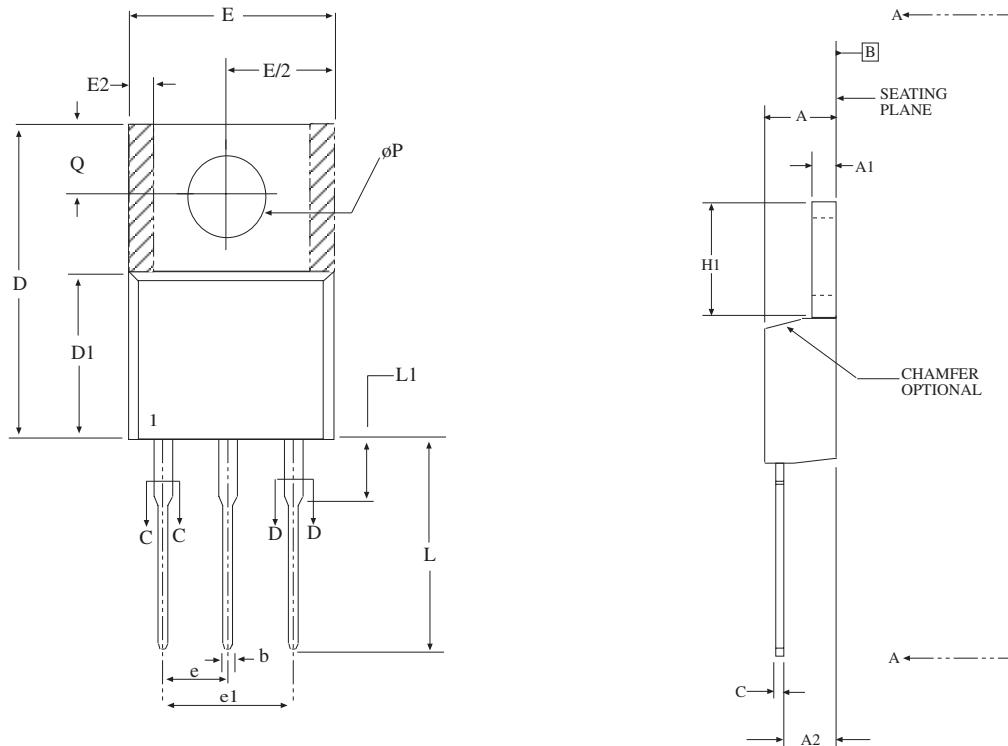

Minimum Load Current

To ensure a proper behavior of the regulator under light load, a minimum load of $5mA$ for SPX3940 is required.
