Precision, High Speed Operational Amplifier

DESCRIPTION

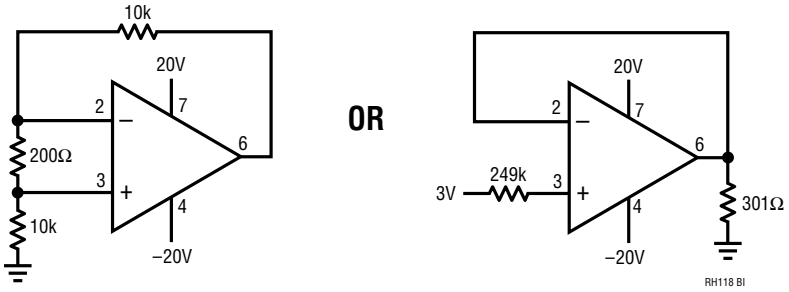
The RH118 is a precision, high speed operational amplifier which offers wide bandwidth and high slew rate. Unlike many wideband amplifiers, the RH118 is unity-gain stable and has a slew rate of 50V/µs.

The wafer lots are processed to Linear Technology's in-house Class S flow to yield circuits usable in stringent military applications.

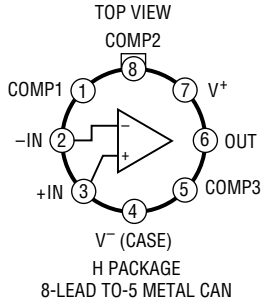
ABSOLUTE MAXIMUM RATINGS

Supply Voltage ..... ±20V
Differential Input Current (Note 1) ..... ±10mA
Input Voltage (Note 2) ..... ±20V
Output Short-Circuit Duration ..... Indefinite
Operating Temperature Range ..... –55°C to 125°C
Storage Temperature Range ..... –65°C to 150°C
Lead Temperature (Soldering, 10 sec) ..... 300°C

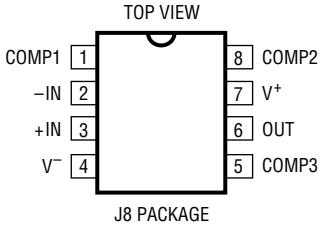
BURN-IN CIRCUIT (Each Amplifier)



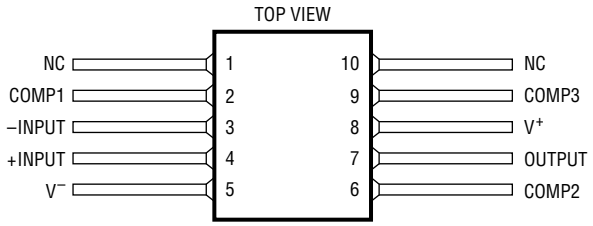
PACKAGE/ORDER INFORMATION



H PACKAGE
8-LEAD TO-5 METAL CAN



J8 PACKAGE
8-LEAD CERDIP



W PACKAGE
10-LEAD CERPAC

TABLE 1: ELECTRICAL CHARACTERISTICS (Preirradiation) (Note 3)

SYMBOL	PARAMETER	CONDITIONS	NOTES	T_A = 25°C MIN	TYP	MAX	SUB-GROUP	−55°C T_A 125°C MIN	TYP	MAX	SUB-GROUP	UNITS
V_{OS}	Input Offset Voltage					4	1			6	2,3	mV

ELECTRICAL CHARACTERISTICS (Continued)

Note 1: The inputs are shunted with back-to-back Zeners for overvoltage protection. Excessive current will flow if a differential voltage greater than 5V is applied to the inputs.

Note 2: For supply voltages less than ±15V, the maximum input voltage is equal to the supply voltage.

Note 3: These specifications apply for ±5V V_S ±20V. The power supplies must be bypassed with a 0.1µF or greater disc capacitor within four inches of the device.

Note 4: Guaranteed by design, characterization or correlation to other tested parameters.

Note 5: Slew rate is 100% tested at wafer probe testing. It is QA sample tested in finished package form.

Note 6: T_A = 25°C, V_S = ±20V, V_{CM} = 0V, unless otherwise specified. Supply bypassed per Note 3.

TOTAL DOSE BIAS CIRCUIT

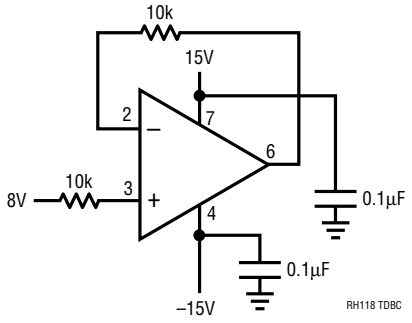

TABLE 2: ELECTRICAL TEST REQUIREMENTS

MIL-STD-883 TEST REQUIREMENTS	SUBGROUP
Final Electrical Test Requirements (Method 5004)	1*,2,3,4,5,6
Group A Test Requirements (Method 5005)	1,2,3,4,5,6
Group C and D End Point Electrical Parameters (Method 5005)	1

* PDA Applies to subgroup 1. See PDA Test Notes.

PDA Test Notes

The PDA is specified as 5% based on failures from group A, subgroup 1, tests after cooldown as the final electrical test in accordance with method 5004 of MIL-STD-883 Class B. The verified failures (including Delta parameters) of group A, subgroup 1, after burn-in divided by the total number of devices submitted for burn-in in that lot shall be used to determine the percent for the lot.

Linear Technology Corporation reserves the right to test to tighter limits than those given.
