## Octal 3-State Noninverting D Flip-Flop

### High-Performance Silicon-Gate CMOS

The MC74HC574A is identical in pinout to the LS574. The device inputs are compatible with standard CMOS outputs; with pull-up resistors, they are compatible with LSTTL outputs.

Data meeting the set-up time is clocked to the outputs with the rising edge of the Clock. The Output Enable input does not affect the states of the flip-flops but when Output Enable is high, all device outputs are forced to the high-impedance state. Thus, data may be stored even when the outputs are not enabled.

The HC574A is identical in function to the HC374A but has the flip-flop inputs on the opposite side of the package from the outputs to facilitate PC board layout.
