## Configurable Dual Supply Octal Transceiver

### with 3-State Outputs for 3 V Systems

The 74LVXC3245 is a 24-pin dual-supply, octal configurable voltage interface transceiver especially well suited for PCMCIA and other real time configurable I/O applications. The V<sub>CCA</sub> pin accepts a 3.0 V supply level; the A port is a dedicated 3.0 V port. The V<sub>CCB</sub> pin accepts a 3.0 V-to-5.0 V supply level. The B port is configured to track the V<sub>CCB</sub> supply level. A 5.0 V level on the V<sub>CCB</sub> pin will configure the I/O pins at a 5.0 V level and a 3.0 V V<sub>CCB</sub> will configure the I/O pins at a 3.0 V level. The A port interfaces with a 3.0 V host system and the B port to the card slots. This device will allow the V<sub>CCB</sub> voltage source pin and I/O pins on the B port to float when  $\overline{OE}$  is High. This feature is necessary to buffer data to and from a PCMCIA socket that permits PCMCIA cards to be inserted and removed during normal operation. The Transmit/Receive (T/R) input determines the direction of data flow. Transmit (active-High) enables data from the A port to B port. Receive (active-Low) enables data from the B port to the A port.

#### Features

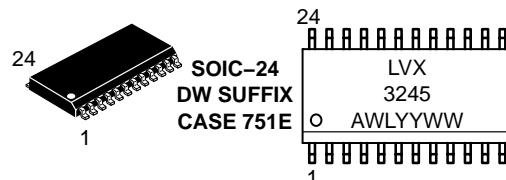

- Bidirectional Interface Between 3.0 V and 3.0 V/5.0 V Buses
- Control Inputs Compatible with TTL Level
- Outputs Source/Sink Up to 24 mA
- Guaranteed Simultaneous Switching Noise Level and Dynamic Threshold Performance
- Available in SOIC and TSSOP Packages
- Flexible V<sub>CCB</sub> Operating Range
- Allows B Port and V<sub>CCB</sub> to Float Simultaneously When  $\overline{OE}$  is High
- Functionally Compatible With the 74 Series 245
- Pb-Free Packages are Available\*

## MAXIMUM RATINGS

Symbol	Parameter		Value	Condition	Unit
$V_{CCA}$ , $V_{CCB}$	DC Supply Voltage		−0.5 to +7.0		V
$V_I$	DC Input Voltage	$\overline{OE}$ , T/R	−0.5 to $V_{CCA}$ +0.5		V
$V_{I/O}$	DC Input/Output Voltage	An	−0.5 to $V_{CCA}$ +0.5		V
		Bn	−0.5 to $V_{CCB}$ +0.5		V
$I_{IK}$	DC Input Diode Current	$\overline{OE}$ , T/R	±20	$V_I < GND$	mA
$I_{OK}$	DC Output Diode Current		±50	$V_O < GND$ ; $V_O > V_{CC}$	mA
$I_O$	DC Output Source/Sink Current		±50		mA
$I_{CC}$ , $I_{GND}$	DC Supply Current	Per Output Pin Maximum Current	±50 ±200		mA
$T_{STG}$	Storage Temperature Range		−65 to +150		°C
	DC Latchup Source/Sink Current		±300		mA

Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.

## RECOMMENDED OPERATING CONDITIONS

### Configurable I/O Application for PCMCIA Cards

The 74LVXC3245 is a dual-supply device well suited for PCMCIA configurable I/O applications. The LVXC3245 consumes less than 1mW of quiescent power in all modes of operation, making it ideal for low power notebook designs. The LVXC3245 meets all PCMCIA I/O voltage requirements at 5.0 V and 3.3 V operation. By tying the V<sub>CCB</sub> pin to the card voltage supply, the PCMCIA card will always have

rail-to-rail output swings, maximizing the reliability of the interface.

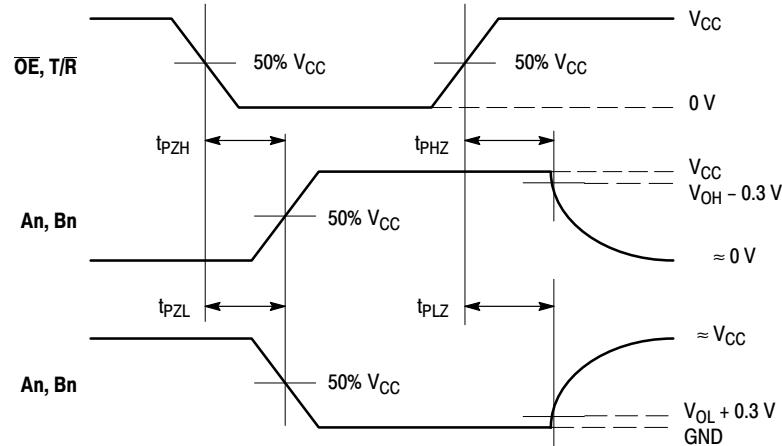

The V<sub>CCA</sub> pin must always be tied to a 3.3 V power supply. This voltage connection provides internal references needed to account for variations in V<sub>CCB</sub>. When connected as in the figure above, the LVXC3245 meets all the voltage and current requirements of the ISA bus standard (IEEE P996).
