Monolithic Linear IC

LA4166M

Recording and Playback System for Microcassette Players

Overview

The LA4166M is a recording and playback system IC that incorporates an on-chip moter control governor, making it ideal for use in microcassette and compact cassette recorders. The LA4166M features single-pin control for selecting recording or playback mode and a recording-mode indicator LED driver. The LA4166M is pin-compatible with the LA4165M. The LA4166M incorporates a preamplifier, an automatic level control (ALC) circuit and a power amplifier.

The preamplifier functions as both recording microphone amplifier and playback equalization amplifier. The ALC circuit cuts high-level inputs and boosts low-level inputs during recording. The power amplifier outputs 215mW (typ) into a 4Ω speaker. The LA4166M operates from a 1.8 to 3.6V supply and is available in 24-pin MFPs.

Features

- On-chip motor control governor.
- Single-pin control for selecting recording or playback mode.
- Recording-mode indicator LED driver.
- Pin-compatible with LA4165M.
- Recording and playback preamplifier.
- ALC circuit.
- Power amplifier.
- 215mW (typ) output power into 4Ω speaker.
- 1.8 to 3.6V sypply.
- 24-pin MFP.

Recommended Operating Conditions at Ta = 25˚C

Parameter	Symbol	Conditions	Ratings	Unit
Supply voltage	V_{CC}		3	V
Supply voltage range	V_{CC}		1.8 to 3.6	V
Power amplifier load resistance	R_{L1}		4 (Playback mode)	Ω
			10 (Recording mode)	kΩ
Preamplifier load resistance	R_{L2}		10	kΩ

Electrical Characteristics at Ta = 25˚C, V_{CC}=3V, power amplifier R_L=4Ω (playback mode) or 10kΩ (recording mode), preamplifier R_L=10kΩ, f=1kHz, 0dBm=0.775V unless otherwise noted.

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Preamplifier and power amplifier quiescent supply current	I_{CCO}	Recording mode, V_I=0V	12	25	38	mA
		Playback mode, V_I=0V	13	26	39	mA
Preamplifier and power amplifier closed-loop voltage gain	V_{G1}	Recording mode, V_O=–5dBm	62.0	64.5	67.0	dB
		Playback mode, V_O=–5dBm	71.0	73.5	76.0	dB
Preamplifier closed-loop voltage gain	V_{G2}	Recording mode, V_O=–10dBm, R_{NF}=100Ω	32.5	35.0	37.5	dB
		Playback mode, V_O=–10dBm, R_{NF}=100Ω	42.5	45.0	47.5	dB
Preamplifier maximum output voltage	V_O	Playback mode, THD=1%	0.3	0.6	1.0	V
Preamplifier input noise voltage	V_{NI}	Playback mode, 20Hz to 20kHz output bandpass filter	0.5	1.1	2.0	μV
Preamplifier total harmonic distortion	THD_1	Playback mode, V_O=0.4V	0.01	0.11	1.0	%
Power amplifier voltage gain	V_{G3}	V_O=–5dBm, R_L=4Ω	26.0	28.5	31.0	dB
Power amplifier output power	P_O	THD=10%, R_L=4Ω	180	215	350	mW
Power amplifier total hormonic distortion	THD_2	P_O=30mW, R_L=4Ω	0.05	0.5	1.5	%
Power amplifier output noise voltage	V_{NO}	R_V=0Ω, R_L=4Ω, 20Hz to 20kHz output bandpass filter	5	25	100	μV
ALC turn-ON input voltage	V_I		–66.5	–69.0	–71.5	dBm
ALC range	ALCR	See note 1.	30	38	45	dB
ALC total harmonic distortion	THD_3	$V_{REC\ IN}$=–40dBm	0.1	0.67	1.5	%
ALC output voltage	V_O	$V_{REC\ IN}$=–40dBm	0.35	0.46	0.55	V
LED drive current	I_{LED}	Using a red LED	1.0	2.5	4.5	mA
Governor reference voltage	$V_{GVN\ REG}$	I_m=100mA	1.1	1.25	1.4	V
Governor quiescent input current	I_d	I_m=100mA	2	3	6	mA
Governor current divider ratio	K	I_m=50 to 100mA	45	50	55	
Governor residual output voltage	V_{sat}	I_m=200mA, $V_{GVN\ REF}$=$V_{GVN\ CONT}$	0.1	0.3	0.5	V
Governor reference voltage vs. supply voltage characteristic		V_{CC}=1.8 to 4.5V, I_m=100mA, See note 2.	0	0.1	0.5	%/V
Governor current divider ratio vs. supply voltage characteristic		V_{CC}=2.0 to 4.5V, I_m=50 to 100mA, See note 3.	0	0.1	0.5	%/V
Governor reference voltage ratio vs. output current characteristic		I_m=50 to 200mA, See note 4.	0	0.007	0.03	%/mA
Governor current divider ratio vs. output current characteristic		I_m=50 to 200mA, See note 5.	–0.05	0.005	0.05	%/mA

Notes

1. Referred to ALC turn-ON voltage, input range for the output level to rise 2.5dB
2. The characteristic is given the equation

$$\left(\frac{\Delta V_{GVN\ REF}}{V_{GVN\ REF}}\right) + \Delta V_{CC}$$

3. The characteristic is given by the equation

$$\left(\frac{\Delta K}{K}\right) + \Delta V_{CC}$$

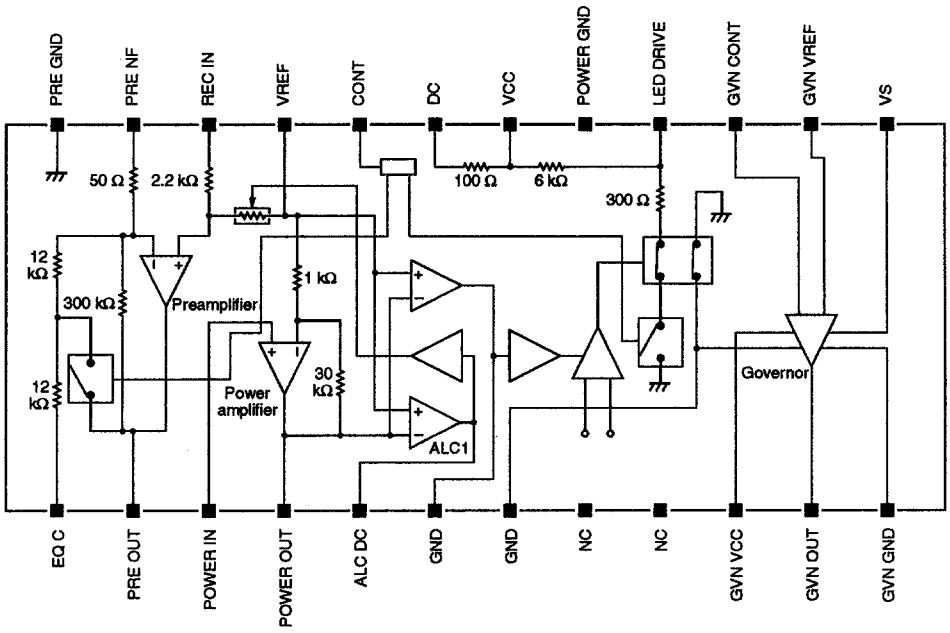
4. The characteristic is given by the equation

$$\left(\frac{\Delta V_{GVN\ REF}}{V_{GVN\ REF}}\right) + \Delta I_m$$

5. The characteristic is given by the equation

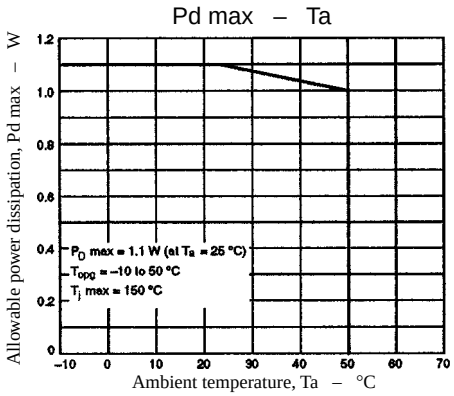
$$\left(\frac{\Delta K}{K}\right) + \Delta I_m$$

Block Diagram

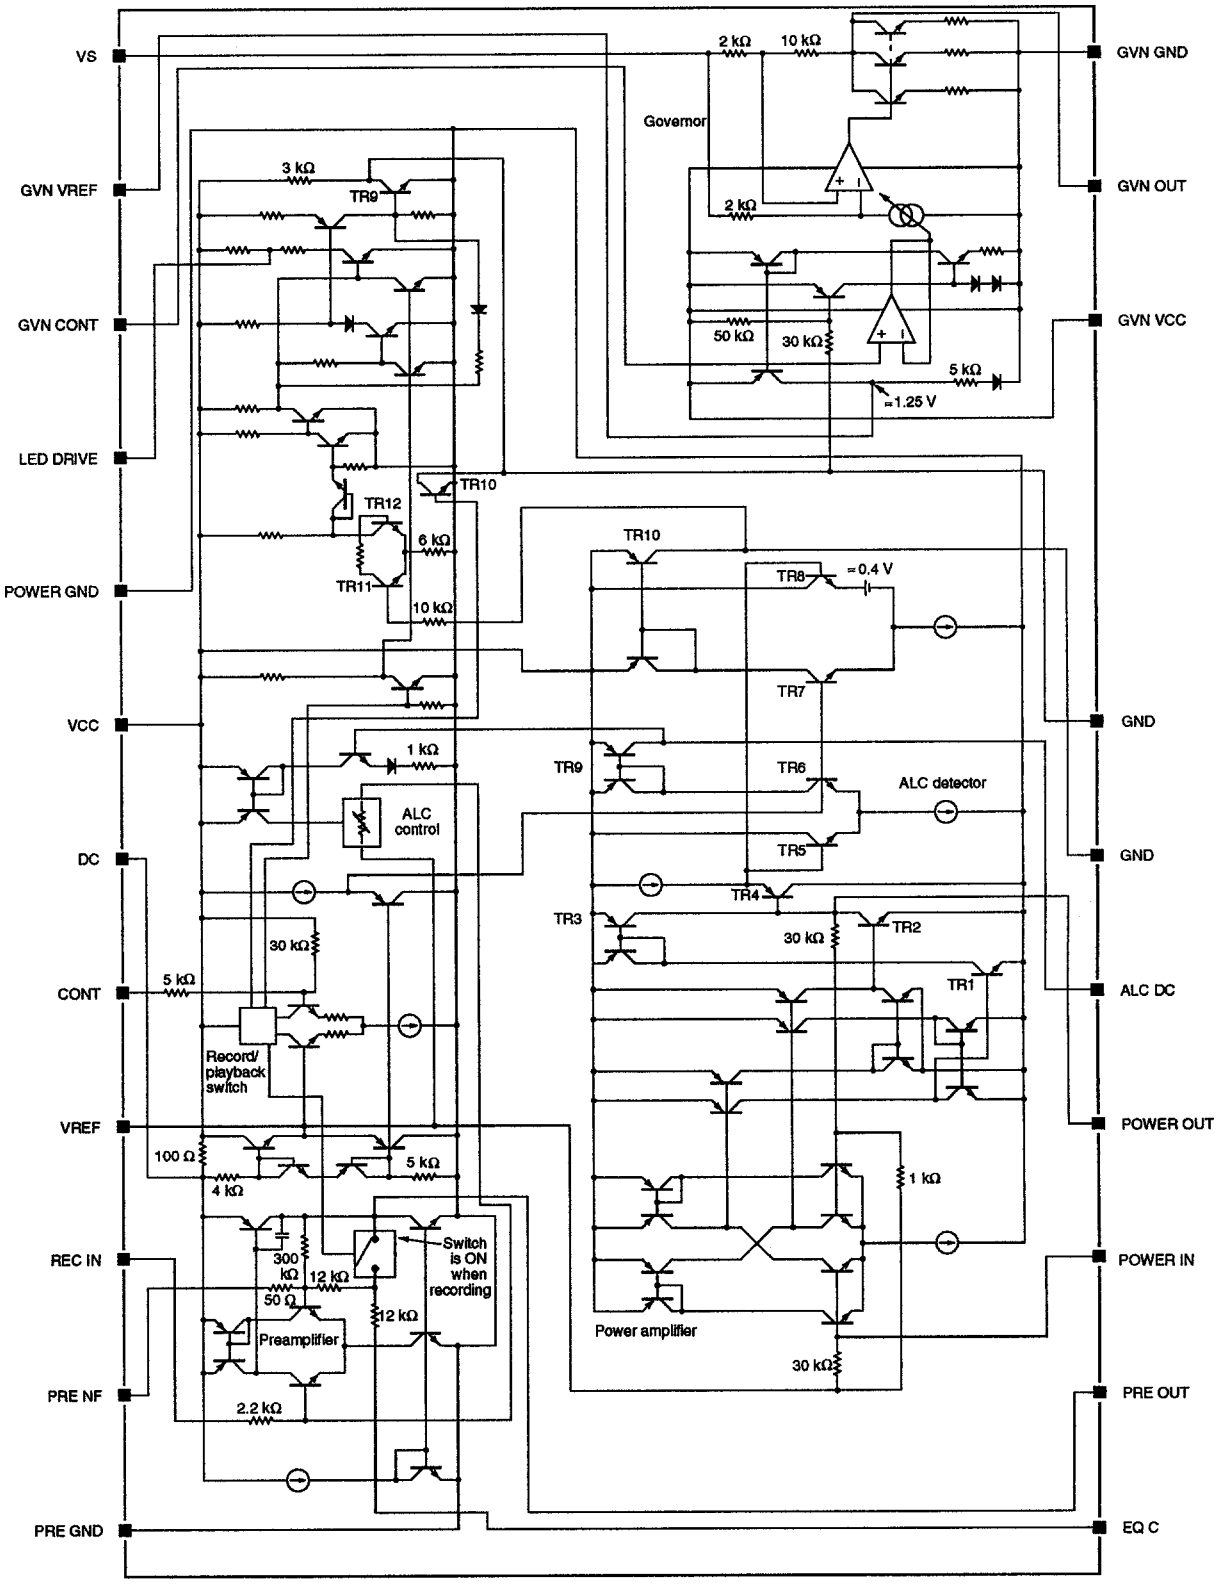


Pin Description

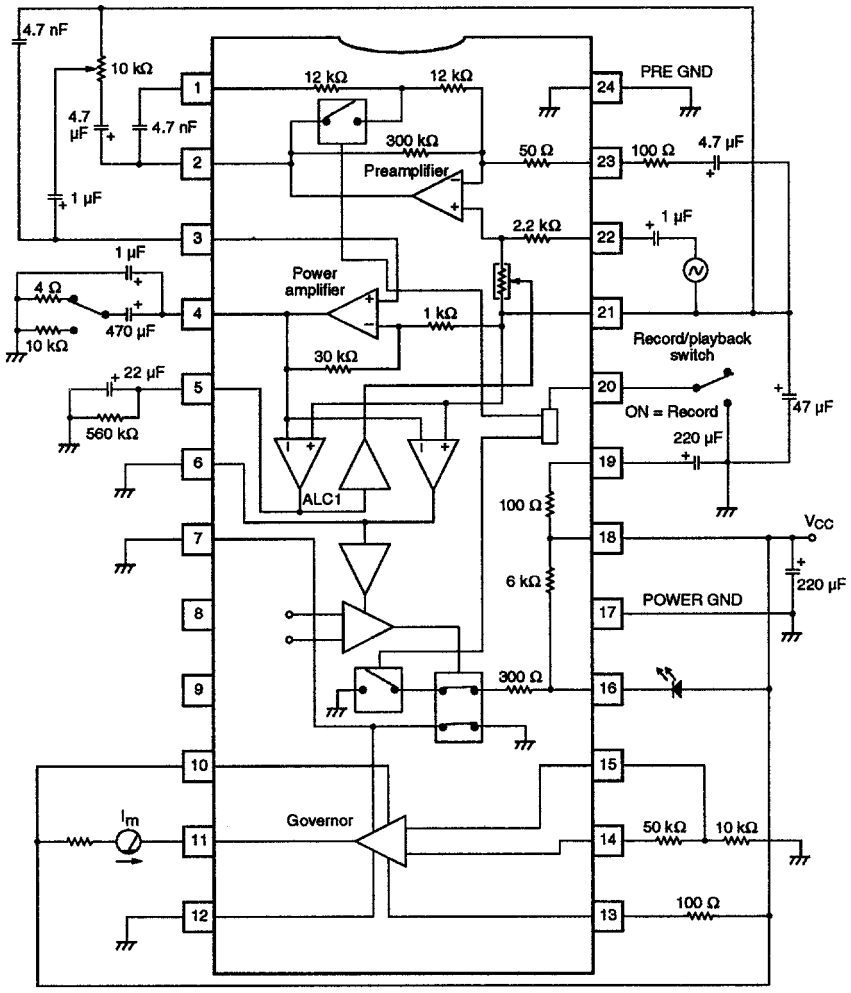
Number	Name	Description
1	EQ C	Playback equalization capacitor connection
2	PRE OUT	Preamplifier output
3	POWER IN	Power amplifier input
4	POWER OUT	Power amplifier output
5	ALC DC	ALC characteristics control network connection
6, 7	GND	Ground
8, 9	NC	No connection
10	GVN V_{CC}	1.8 to 3.6V governor supply
11	GVN OUT	Governor output
12	GVN GND	Governor ground
13	VS	Motor supply voltage
14	GVN VREF	Governor reference voltage output
15	GVN CONT	Governor control input
16	LED DRIVE	LED driver output
17	POWER GND	Power amplifier ground
18	V_{CC}	1.8 to 3.6V supply
19	DC	Ripple-filter capacitor connection
20	CONT	Record and playback select input
21	VREF	Reference voltage output
22	REC IN	Recording signal input
23	PRE NF	Preamplifier gain control input
24	PRE GND	Preamplifier ground



Schematic Diagram



Measurement Circuit



Functional Description

The LA4166M comprises a preamplifier, an ALC, an LED driver, a power amplifier and a governor. The operation of these fuctional blocks in recording and playback modes is shown in table 1. Recording mode is selected when CONT is held at 0V, and playback mode, when CONT is open.

Table 1. Block operation

Mode	Preamplifier	ALC	LED driver	Power amplifier	Governor
Recording	ON	ON	ON	ON	ON
Playback	ON	OFF	OFF	ON	ON

Typical Application

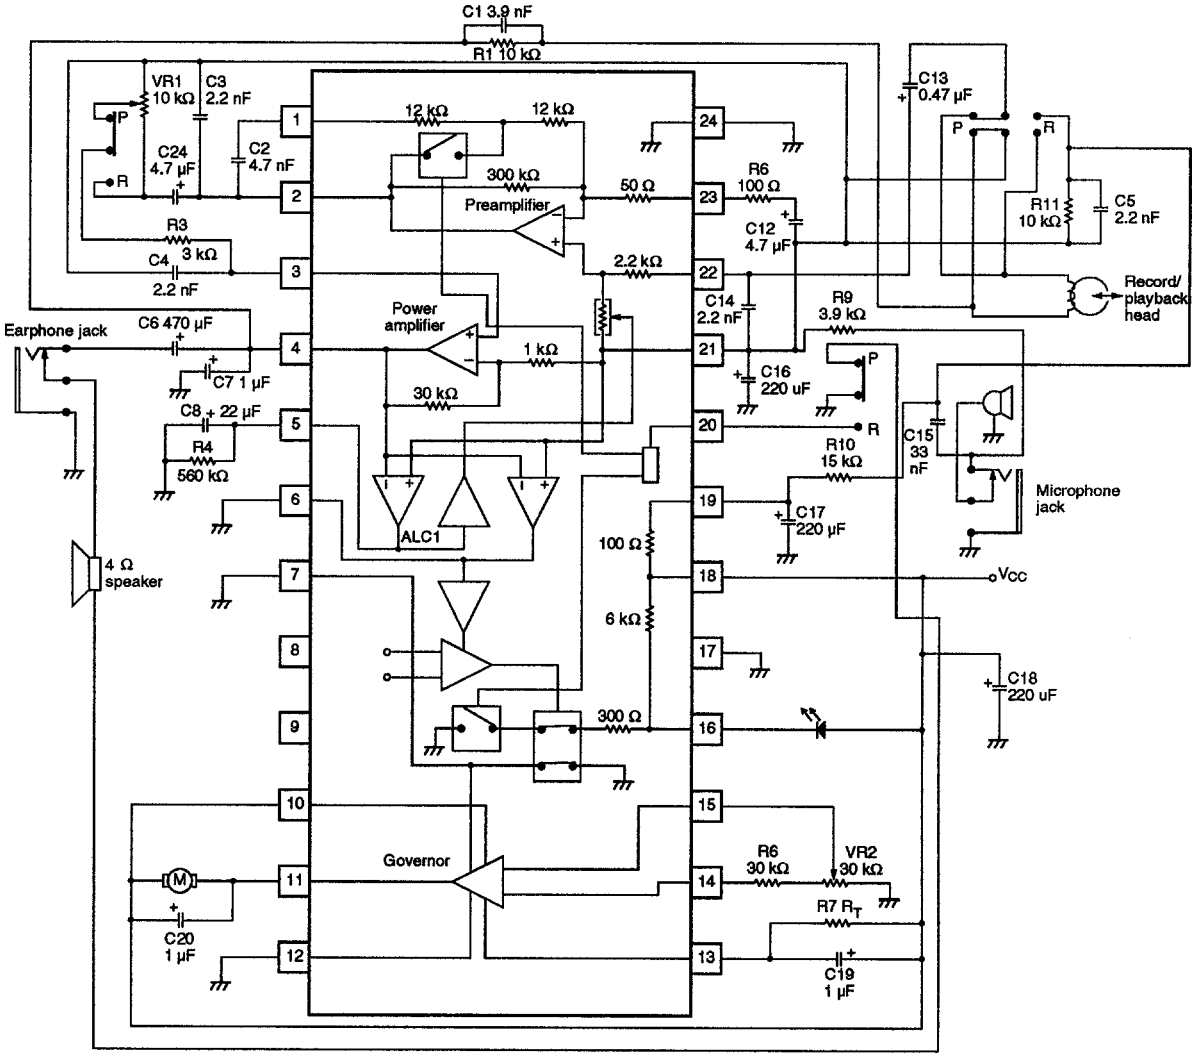


Figure 1. Application circuit

Note the external components are used to determine the LA4166M operating characteristics. For example, C2 determines the playback equalization characteristic, R8 determines the preamplifier gain, C8 and R4 determine the ALC attack and recovery times and C17 determines the power supply ripple rejection. The ripple rejection decreases as the capacitance C17 is decreased.

Other components are used to determine the overall circuit characteristics. For example, C1 and R1 determine the recording current and C7 prevents output oscillations.

Note also that LA4166M internal components determine other LA4166M characteristics. For example, the 2.2kΩ PRE IN input resistor determines the ALC range, and the 1kΩ and 30kΩ resistors at the power amplifier inverting input determine amplifier gain.

In addition, LED DRIVE should be left open when not using the LED indicator function, the double-pole switch that controls LED DRIVE is normally closed, the NC pins should be left open, and the GND pins should be tied to ground

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
