RCMP SOFTWARE DRIVER DETAILED DESIGN

ERRATA

ISSUE 1: OCTOBER 1997

CONTENTS

1 CHANGES TO APPNOTE ISSUE 3.....1

1.1 RCMP_DIAG.C.....1

1.2 RCMP_PRIM.C1

1 CHANGES TO DOCUMENT ISSUE 3

This document is the errata notice for Issue 3 of the RCMP Software Driver Detailed Design (PMC-960345A3). Specifically, it includes modifications/enhancements to the C code.

1.1 rcmp_diag.c

The following line is modified to align with the write mask bits in Reg. 0x22:

```
mask[EXTRAMMSB] = 0x800F0x9F0F;
```

1.2 rcmp_prim.c

The following function is added to include the write mask function provided by WM[4:0] in Reg. 0x22:

```

/*****
/*
/*          SRAM WRITE MASKED
/*
/* function name: wr_sram_masked
/*
/* Parameters:
/* dev   Pointer to the base address of the RCMP device being
/*       accessed.
/* d     Pointer to an array containing the data to be written.
/* vcra  The value presented on the SA[15:0] primary outputs.
/*       Identifies the VC Table entry.
/* field The value presented on the SA[19:16] primary outputs.
/*       Represents a field within the VC Table entry.
/* mask  The byte masks (5 bits) used to selectively write to
/*       the 5-byte (40-bit) SRAM entry
/*
/* Returns:
/* 0     Success
/* 1     Timed out without a SRAM write enacted. The BUSY bit
/*       appears to be held high.
/*
/* Description:
/*
/* This function writes an external SRAM word. The following

```

```
/* steps are taken: */
/* */
/* 1.) Poll the BUSY bit until a logic 0. It is not a logic 0 */
/* within 10 reads, abort the function unsuccessfully under */
/* the assumption of a hardware failure. */
/* 2.) Write the contents of the "d" array to the External RAM */
/* Data registers (0x23 - 0x25) */
/* 3.) Write "vcra" to the External RAM Address (LSB) (0x21). */
/* 4.) Write "field" and the "mask" to the External RAM Address */
/* (MSB) (0x22) and set the RWB bit to a logic 0. */
/* */
/*****
```

```
DATA wr_sram_masked ( DEVICE *dev, unsigned char *d, DATA vcra,
                    int field, int mask)
```

```
{
    DATA regd;
    int i, busy;

    i = 10;
    do {
        i--;
        if (i == 0) return(1); /* abnormal termination */
        regd = rd (dev, EXTRAMMSB); /* poll BUSY */
        busy = (regd >> 14) & 0x01;
    } while (busy == 1);

    regd = d[0] & 0xFF;
    wr (dev, EXTRAMDMSB, regd);
    regd = (d[1] << 8) | (d[2] & 0xFF);
    wr (dev, EXTRAMD, regd);
    regd = (d[3] << 8) | (d[4] & 0xFF);
    wr (dev, EXTRAMDLSB, regd);

    wr(dev, EXTRAMALS, vcra);
    regd = ((mask & 0x1F) << 8) | (field & 0x0F);
    /* clear RWB, write mask, SA[19:16]*/
    wr(dev, EXTRAMMSB, regd);

#ifdef SRAMDIAG
    for (i=0;i<5;i++)
        sram_mimic[vcra*16 + field][i] = d[i];
#endif

    return(0);
}
```
