■ TYPICAL APPLICATIONS

Pins 6 and 7 show an open collector. Mount resistor R_P shown by the following equation.

$$R_P = (V^+_{MIN} - 0.2) / 0.3 \text{ (k}\Omega\text{)}$$

Resistor R_P to pin 7 is omissible, if pin 6 only is used. But resistor R_P to pin 6 should be put when Out 2 only is used. V^+_{MIN} is minimum supply voltage.
