C16x-Family of High-Performance CMOS 16-Bit Microcontrollers

C165 / 3 V

Advance Information

C165 16-Bit Microcontroller

Additional Specification for Operation at 3 V Supply

- High Performance 16-bit CPU with 4-Stage Pipeline
- 143 ns Instruction Cycle Time at 14 MHz CPU Clock
- 715 ns Multiplication (16×16 bits), 1.43 μ s Division (32 / 16 bit)
- Enhanced Boolean Bit Manipulation Facilities
- Additional Instructions to Support HLL and Operating Systems
- Register-Based Design with Multiple Variable Register Banks
- Single-Cycle Context Switching Support
- Up to 16 MBytes Linear Address Space for Code and Data
- 2 KBytes On-Chip RAM
- 4 KBytes On-Chip ROM (RM types only)
- Programmable External Bus Characteristics for Different Address Ranges
- 8-Bit or 16-Bit External Data Bus
- Multiplexed or Demultiplexed External Address/Data Buses
- Five Programmable Chip-Select Signals
- Hold- and Hold-Acknowledge Bus Arbitration Support
- 1024 Bytes On-Chip Special Function Register Area
- Idle and Power Down Modes
- 8-Channel Interrupt-Driven Single-Cycle Data Transfer Facilities via Peripheral Event Controller (PEC)
- 16-Priority-Level Interrupt System with 28 Sources, Sample-Rate down to 72 ns
- Two Multi-Functional General Purpose Timer Units with 5 Timers
- Two Serial Channels (Synchronous/Asynchronous and High-Speed-Synchronous)
- Programmable Watchdog Timer
- Up to 77 General Purpose I/O Lines
- Supported by a Wealth of Development Tools like C-Compilers, Macro-Assembler Packages, Emulators, Evaluation Boards, HLL-Debuggers, Simulators, Logic Analyzer Disassemblers, Programming Boards
- On-Chip Bootstrap Loader
- 100-Pin MQFP Package (EIAJ)
- 100-Pin TQFP Package (Thin QFP)

This document describes specific items relevant for operation at 3 V.
For functional descriptions please refer to the standard C165 data sheet.

This document describes the **SAB-C165-L25M**, the **SAB-C165-L25F**, the **SAB-C165-R25M**, the **SAB-C165-RF** and the **SAF-C165-L25M**.

For simplicity all versions are referred to by the term **C165** throughout this document.

Introduction

The C165's technology, originally a 5 V technology, allows to run the device at supply voltages down to 2.7 V. This addendum specifies the characteristics of the C165 when operated at 3 V. The input and output levels are still TTL compatible, the power supply current is reduced. The timing characteristics, however, are effected by the reduced voltage differences between supply voltages and IO levels.

For this reason some timings are adjusted to the new circumstances and the operation at 3 V is limited to a CPU clock frequency of up to 14 MHz for the standard temperature range (0...70°C) and up to 12 MHz for the temperature range -40...85°C.

Ordering Information:

Type	Ordering Code	Package	Function
SAB-C165-R25M	Q67121-D...	P-MQFP-100-2	16-bit microcontroller with 2 KByte RAM and 4 KByte ROM Temperature range 0 to +70 °C
SAB-C165-L25M	Q67121-C1005	P-MQFP-100-2	16-bit microcontroller with 2 KByte RAM Temperature range 0 to +70 °C
SAF-C165-L25M	Q67123-C1007	P-MQFP-100-2	16-bit microcontroller with 2 KByte RAM Temperature range -40 to +85 °C
SAB-C165-R25F	Q67121-D...	P-TQFP-100-3	16-bit microcontroller with 2 KByte RAM and 4 KByte ROM Temperature range 0 to +70 °C
SAB-C165-L25F	Q67121-C1004	P-TQFP-100-3	16-bit microcontroller with 2 KByte RAM Temperature range 0 to +70 °C

Note: The ordering codes (Q67121-D...) for the Mask-ROM versions are defined for each product after verification of the respective ROM code.

Absolute Maximum Ratings

Ambient temperature under bias (T_A):

SAB-C165-L25M, SAB-C165-R25M, SAB-C165-L25F, SAB-C165-R25F..... 0 to +70 °C

SAF-C165-L25M..... -40 to +85 °C

Storage temperature (T_{ST})..... - 65 to +150 °C

Voltage on V_{CC} pins with respect to ground (V_{SS}) -0.5 to +6.5 V

Voltage on any pin with respect to ground (V_{SS}) -0.5 to $V_{CC} + 0.5$ V

Input current on any pin during overload condition -10 to +10 mA

Absolute sum of all input currents during overload condition|100 mA|

Power dissipation..... 1.5 W

Note: Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. During overload conditions ($V_{IN} > V_{CC}$ or $V_{IN} < V_{SS}$) the voltage on pins with respect to ground (V_{SS}) must not exceed the values defined by the Absolute Maximum Ratings.

Parameter Interpretation

The parameters listed in the following partly represent the characteristics of the C165 and partly its demands on the system. To aid in interpreting the parameters right, when evaluating them for a design, they are marked in column “Symbol”:

CC (Controller Characteristics):

The logic of the C165 will provide signals with the respective timing characteristics.

SR (System Requirement):

The external system must provide signals with the respective timing characteristics to the C165.

DC Characteristics

$V_{CC} = 2.7$ V to 3.6 V; $V_{SS} = 0$ V

$T_A = 0$ to +70 °C for SAB-C165-L25M, SAB-C165-R25M, SAB-C165-L25F, SAB-C165-R25F

$T_A = -40$ to +85 °C for SAF-C165-L25M

Notes

- 1) This specification is not valid for outputs which are switched to open drain mode. In this case the respective output will float and the voltage results from the external circuitry.
- 2) The pullup device on the $\overline{\text{RSTIN}}$ input is a transistor rather than a real resistor. It is intended to drive current into an external capacitor in order to realize an automatic power on reset. After a short power shutdown the external capacitor may hold a low residual charge due to the nature of the pullup device. The test condition with $V_{\text{IN}} = 0.8 \text{ V}$ refers to this fact.
- 3) The maximum current may be drawn while the respective signal line remains inactive.
- 4) The minimum current must be drawn in order to drive the respective signal line active.
- 5) This specification is only valid during Reset, or during Hold- or Adapt-mode. Port 6 pins are only affected, if they are used for $\overline{\text{CS}}$ output and the open drain function is not enabled.
- 6) Not 100% tested, guaranteed by design characterization.
- 7) The supply current is a function of the operating frequency. This dependency is illustrated in the figure below. These parameters are tested at V_{CCmax} and maximum CPU clock with all outputs disconnected and all inputs at V_{IL} or V_{IH} .
- 8) This parameter is tested including leakage currents. All inputs (including pins configured as inputs) at 0 V to 0.1 V or at $V_{\text{CC}} - 0.1 \text{ V}$ to V_{CC} , $V_{\text{REF}} = 0 \text{ V}$, all outputs (including pins configured as outputs) disconnected.

Memory Cycle Variables

The timing tables below use three variables which are derived from the BUSCONx registers and represent the special characteristics of the programmed memory cycle. The following table describes, how these variables are to be computed.

Description	Symbol	Values
ALE Extension	t_A	$TCL * <ALECTL>^1)$
Memory Cycle Time Waitstates	t_C	$2TCL * (15 - <MCTC>)$
Memory Tristate Time	t_F	$2TCL * (1 - <MTTC>)$

The following notes apply to the next two timing tables

(Multiplexed Bus and Demultiplexed Bus):

1) RW-delay and t_A refer to the next following bus cycle.

2) Read data are latched with the same clock edge that triggers the address change and the rising $\overline{RD}$ edge. Therefore address changes before the end of $\overline{RD}$ have no impact on read cycles.

*) The rising edges of $\overline{CS}$ represent the worst case. The delay for falling edges is lower.

Notes

¹⁾ These timings are given for test purposes only, in order to assure recognition at a specific clock edge.

²⁾ Demultiplexed bus is the worst case. For multiplexed bus 2TCL are to be added to the maximum values. This adds even more time for deactivating READY.

The $2t_A$ and t_C refer to the next following bus cycle, t_F refers to the current bus cycle.
