

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

**TC74HC237AP, TC74HC237AF****3 - TO - 8 LINE DECODER / LATCH**

The TC74HC237A is a high speed CMOS 3 - to - 8 LINE DECODER ADDRESS LATCH fabricated with silicon gate C2MOS technology.

It achieves the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

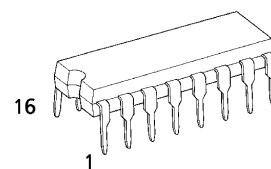

It is composed of a 3 - bit input latches with a common  $\overline{GL}$  enable input and 3 - to - 8 line decoder with enable inputs  $G1$  and  $\overline{G2}$ . The 3 - bit binary data is stored into the input latch on the high level of  $\overline{GL}$ . The value of this data determines which one of the outputs will go low.

When the enable input  $G1$  is held low or  $\overline{G2}$  is held high, decoding function is inhibited and all the 8 outputs go high. The two enable inputs are provided to ease cascade connection and permits the application address decoder for memory system.

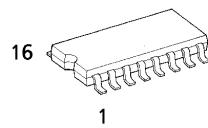

All inputs are equipped with protection circuits against static discharge or transient excess voltage.

**FEATURES :**

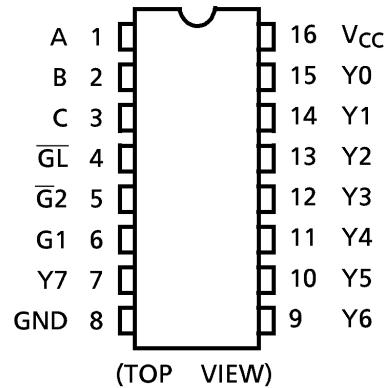

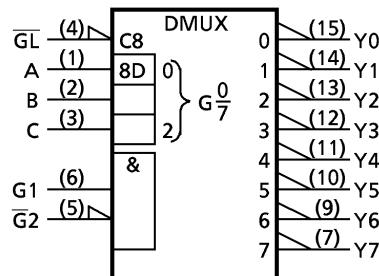

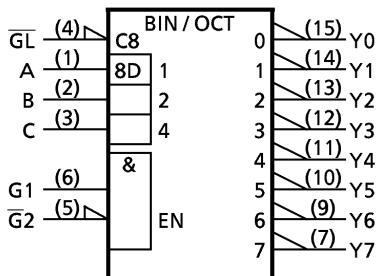

- High Speed..... $t_{pd} = 12\text{ns}(\text{typ.})$  at  $V_{CC} = 5\text{V}$
- Low Power Dissipation..... $I_{CC} = 4\mu\text{A}(\text{Max.})$  at  $T_a = 25^\circ\text{C}$
- High Noise Immunity..... $V_{NIH} = V_{NIL} = 28\%$   $V_{CC}$  (Min.)
- Output Drive Capability.....10 LSTTL Loads
- Symmetrical Output Impedance..... $|I_{OH}| = I_{OL} = 4\text{mA}(\text{Min.})$
- Balanced Propagation Delays..... $t_{pLH} \approx t_{pHL}$
- Wide Operating Voltage Range..... $V_{CC}$  (opr.) =  $2\text{V} \sim 6\text{V}$
- Pin and Function Compatible with 74LS237

P (DIP16-P-300-2.54A)  
Weight : 1.00g (Typ.)

F (SOP16-P-300-1.27)  
Weight : 0.18g (Typ.)

**PIN ASSIGNMENT****IEC LOGIC SYMBOL**

- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

| Propagation Delay Time<br>( A, B, C—Y )           | $t_{pLH}$   |                | 2.0                | —         | 60   | 180  | —             | 225  |      |
|   | $t_{pHL}$   |                | 4.5                | —         | 19   | 36   | —             | 45   |      |
|   |             |                | 6.0                | —         | 16   | 31   | —             | 38   |      |
| Input Capacitance                                 | $C_{IN}$    |                | —                  | 5         | 10   | —    | 10            | —    | pF   |
| Power Dissipation Capacitance                     | $C_{PD}(1)$ |                | —                  | 52        | —    | —    | —             | —    |      |

Note (1)  $C_{PD}$  is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption without load.

Average operating current can be obtained by the equation :

$$I_{CC(\text{opr})} = C_{PD} \cdot V_{CC} \cdot f_{IN} + I_{CC}$$

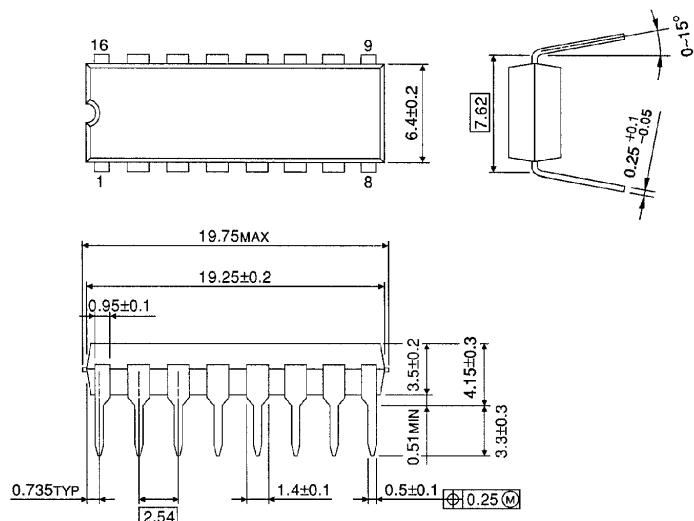

## TYPICAL APPLICATION

6 Line to 64 Line Decoder with Input Address Storage

## DIP 16PIN OUTLINE DRAWING (DIP16-P-300-2.54A)

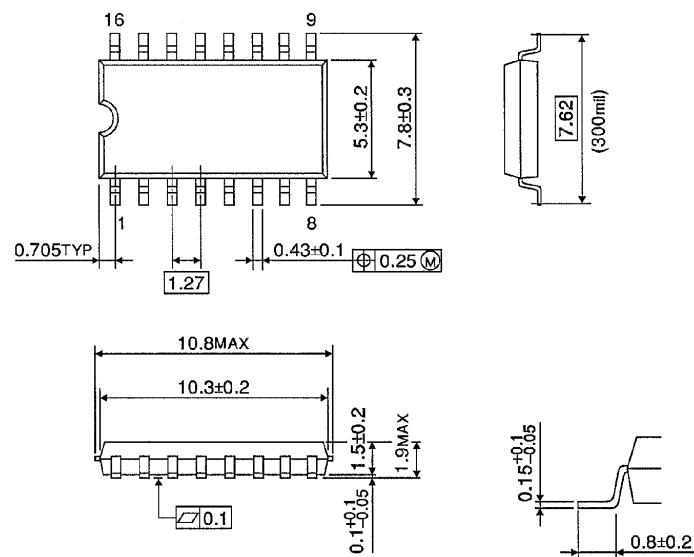

Unit in mm

Weight : 1.00g (Typ.)

## SOP 16PIN (200mil BODY) OUTLINE DRAWING (SOP16-P-300-1.27)

Unit in mm

Weight : 0.18g (Typ.)
