Thus, when designing products which include this device, ensure that no absolute maximum rating value will ever be exceeded.

Note 1: The recommended operating Conditions for a device are operating Conditions under which it can be guaranteed that the device will operate as specified. If the device is used under operating Conditions other than the recommended operating Conditions (supply voltage, operating temperature range, specified AC/DC values etc.), malfunction may occur. Thus, when designing products which include this device, ensure that the recommended operating Conditions for the device are always adhered to.

Note2: Clock frequency fc ; The supply voltage range of the Conditions shows the value in NORMAL1, 2 modes and IDLE1, 2 modes.
