

GENERAL DESCRIPTION

The M906-01 is a PLL (Phase Locked Loop) based clock generator that uses an internal VCSO (Voltage Controlled SAW Oscillator) to produce a very low jitter output clock. It is ideal for Gigabit Ethernet. The output clock (frequency of 156.25 or 187.50MHz for example) is provided from six LVPECL clock output pairs. (Specify frequency at time of order.) The accuracy of the output frequency is assured by the internal PLL, which phase-locks the internal VCSO to the reference input frequency (25 or 30MHz for example). The input reference can either be an external crystal, utilizing the internal crystal oscillator, or a stable external clock source such as a packaged crystal oscillator.

FEATURES

- ◆ Output clock frequency from 125MHz to 190MHz (Consult factory for frequency availability)
- ◆ Six identical LVPECL output pairs
- ◆ Integrated SAW (surface acoustic wave) delay line
- ◆ Low jitter 0.7ps RMS (over 12kHz-20MHz)
- ◆ Ideal for Gigabit Ethernet clock reference
- ◆ Output-to-output skew < 100ps
- ◆ External XTAL or LVCMOS reference input
- ◆ Selectable external feed-through clock input
- ◆ STOP clock control (Logic 1 stops output clocks)
- ◆ Industrial temperature grade available
- ◆ Single 3.3V power supply
- ◆ Small 9 x 9 mm SMT (surface mount) package
- ◆ Pb-free design/construction on all 9 x 9 mm modules

PIN DESCRIPTIONS

Number	Name	I/O	Configuration	Description
1, 2, 3, 10, 14, 26	GND	Ground		Power supply ground connections.
4 9	OP_IN nOP_IN	Input		External loop filter connections. See Figure 5, External Clock Feed-through, on pg. 3.
5 8	nOP_OUT OP_OUT	Output		
6 7	nVC VC	Input		
11, 19, 33	VCC	Power		Power supply connection, connect to +3.3V.
12 13	FOUT0 nFOUT0	Output	No internal terminator	Clock output pairs, differential LVPECL output (156.25 MHz for the M906-01-156.2500)
15 16	FOUT1 nFOUT1			
17 18	FOUT2 nFOUT2			
20 21	FOUT3 nFOUT3			
29 30	FOUT4 nFOUT4			
31 32	FOUT5 nFOUT5			
23	EN_EXT_CLK	Input	Internal pull-down resistor ¹	Logic 1 enables the EXT_CLK input. Use Logic 0 for normal operation.
24	EXT_CLK	Input		External clock feed-through: 0 to 200 MHz
25	STOP	Input	Internal pull-down resistor ¹	Logic 1 stops clock outputs. Use Logic 0 for normal operation.
27	XTAL_1 / REF_IN	Input		External crystal connection. Also accepts LVCMOS/LVTTL compatible clock source.
28	XTAL_2	Input		External crystal connection. Leave unconnected when driving pin 27 with external clock reference.
34, 35, 36	DNC			Do Not Connect.

Note 1: For typical value of internal pull-down resistor, see **DC Characteristics, Pull-down** on pg. 6.

Table 2: Pin Descriptions

FUNCTIONAL DESCRIPTION

The M906-01 is a PLL (Phase Locked Loop) based clock generator that generates output clocks synchronized to an input reference clock.

The M906-01 combines the flexibility of a VCSO (Voltage Controlled SAW Oscillator) with the stability of a crystal oscillator.

Input Reference

The input reference can either be an external, discrete crystal device or a stable external clock source such as a packaged crystal oscillator:

- If an external crystal is used with the on-chip crystal oscillator circuit (XTAL OSC), the external crystal should be a parallel-resonant, fundamental mode crystal. Apply it to the XTAL_1 / REF_IN and XTAL_2 input pins. External crystal load capacitors are also required.
- If an external LVCMOS/LVTTL clock source is used, apply it to the XTAL_1 / REF_IN input pin.

In either case, the reference clock is supplied to the phase detector of the PLL. The M906-01 includes a reference divider that divides the input reference frequency by a fixed value "R" and provides the result to the phase detector.

The EX_CLK pin is available for a clock feed-through mode for testing. See "External Clock Feed-through" on pg. 3.

The PLL

The PLL (Phase Locked Loop) includes the phase detector, the VCSO, a feedback divider (labeled "M Divider"), and a reference divider ("R Divider").

The feedback divider divides the VCSO output frequency by a fixed value "M" to match the reference frequency provided to the phase detector by the reference divider.

By controlling the frequency and phase of the VCSO, the phase detector precisely locks the frequency and phase of the feedback divider output to that of the reference divider output. This creates an output frequency that is a multiple of the reference frequency (which is output from the VCSO).

The relationship between the VCSO output frequency, the M Divider, the R Divider and the input reference frequency is defined as follows:

$$F_{\text{VCSO}} = F_{\text{XTAL}} \times \frac{M}{R}$$

For the M906-01-156.2500 (see "Ordering Information" on pg. 8):

- VCSO output frequency = 156.25MHz
- Input reference frequency = 25MHz
- M=25
- R= 4

Therefore, for the M906-01-156.2500:

$$156.25\text{MHz} = 25\text{MHz} \times \frac{25}{4}$$

The product of the input crystal frequency and $\frac{M}{R}$ falls within the lock range of the VCSO.

External Clock Feed-through

The EXT_CLK pin provides an input for an external single-ended clock that directly drives the LVPECL clock outputs. It can be used for system debugging and performance evaluation.

1. Set pin EN_EXT_CLK to Logic 1.
2. Apply an external LVCMOS/LVTTL clock source to the EXT_CLK input pin.

Due to the fact that EXT_CLK bypasses the PLL, any frequency between DC and 200MHz can be used.

STOP Clock

The STOP pin puts the output clock into a static condition.

Logic 1 Output clocks are static

Logic 0 Output clocks enabled for normal operation

APPLICATION INFORMATION

This section includes information on the optional external crystal and on the external loop filter. The subsections on the loop filter provide example component values and also briefly describe the SAW PLL simulator tool and additional application information available at www.icst.com.

External Crystal Specifications

If an external crystal is used with the on-chip crystal oscillator circuit (XTAL OSC), the external crystal should have the following general specifications:

Crystal Specifications

Parameter	Min	Typ	Max	Unit
Crystal Type		AT-cut quartz		
Mode of Oscillation		Fundamental		
f_0 Frequency Range	16		40	MHz
ESR Equivalent Series Resistance			50	Ω
Spurious Response (non-harmonic)			-40	dBc
C_L Load Capacitance, parallel load resonant	16		32	pF
P_0 Drive Level	0.1		1.0	mW

Table 3: Crystal Specifications

The external crystal will be applied to the XTAL_1 / REF_IN and XTAL_2 input pins. External crystal load capacitors are also required.

Recommended External Crystal Configuration

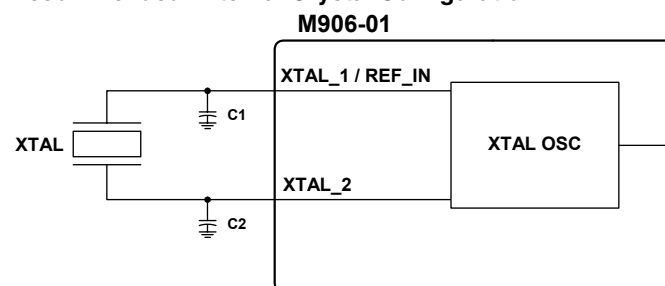

Figure 4: Recommended External Crystal Configuration

XTAL = 25 or 30 MHz, Load Capacitance Specification = 18 pF
C1 = 27 pF
C2 = 33 pF

External load capacitors C1 and C2 present a load of 15 pF to the crystal (they are seen in series by the crystal through the common ground connection). With the additional of PCB trace capacitance and M906-01 input capacitance, the total load to the crystal is about 18 pF.

External Loop Filter

To provide stable PLL operation, and thereby a low jitter output clock, the M906-01 requires the use of an external loop filter. This is provided via the provided filter pins (see Figure 5).

Due to the differential signal path design, the implementation requires two identical complementary RC filters as shown here.

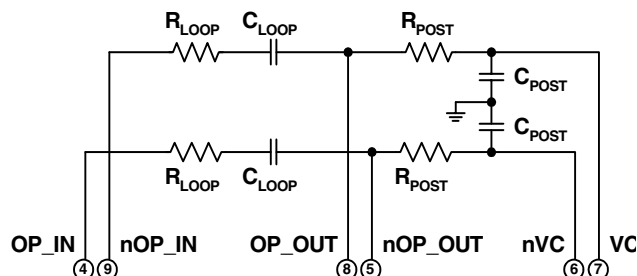

Figure 5: External Clock Feed-through

Example External Loop Filter Component Values

PLL Band- width (kHz)	Damping Factor	R loop (k Ω)	C loop (μ F)	R post (k Ω)	C post (pF)
0.5	3.0	1.5	4.70	20	1500
1.5 ¹	3.3	4.7	1.00	10	1500
2.1 ²	1.1	4.7	0.10	10	1500
6.4	4.5	20.0	0.10	20	270
10.6 ³	4.2	33.0	0.033	20	120

Table 4: Example External Loop Filter Component Values

- Note 1: Optimum loop bandwidth when using an external reference crystal. Will help to attenuate interference on the crystal's sinusoidal clock waveform and therefore will minimize device output clock jitter.
- Note 2: Alternative loop filter setting when using an external reference crystal. Smaller C loop lowers loop damping factor with negligible increase in output jitter.
- Note 3: Optimum loop bandwidth when using an external reference crystal oscillator. The square wave clock reference does not require as much jitter attenuation, which allows for a wider loop bandwidth and improved system noise tolerance.

Refer to the M906-01 product web page at www.icst.com/products/summary/m906-01.htm for additional product information.

PLL Simulator Tool Available

A free PC software utility is available on the ICS website (www.icst.com). The M2000 Timing Modules PLL Simulator is a downloadable application that simulates PLL jitter and wander transfer characteristics. This enables the user to set appropriate external loop component values in a given application.

Refer to the SAW PLL Simulator Software web page at www.icst.com/products/calculators/m2000filterSWdesc.htm for additional information.

SAW PLL Application Notes Available

The ICS web site also has application notes on:

- PCB layout guidelines (including special detailed instructions for preventing issues such as external reference crosstalk)
- Any new special device application details that may become available
- Instructions for using PLL simulator software
- Guidelines for PCB fabrication (inc. recommended PCB footprint, solder mask, and furnace profile)

Refer to the SAW PLL Application Notes web page at www.icst.com/products/appnotes/SawPllAppNotes.htm for application notes and any additional product information that may become available.

ABSOLUTE MAXIMUM RATINGS¹

Symbol	Parameter	Rating	Unit
V_I	Input Voltage	-0.5 to $V_{CC} + 0.5$	V
V_O	Output Voltage	-0.5 to $V_{CC} + 0.5$	V
I_O	Output Current	22	mA
V_{CC}	Power Supply Voltage	4.6	V
T_S	Storage Temperature	-45 to +100	°C

Table 5: Absolute Maximum Ratings

Note 1: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These ratings are stress specifications only. Functional operation of product at these conditions or any conditions beyond those listed in Recommended Conditions of Operation, DC Characteristics, or AC Characteristics is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.
