

Low-Voltage CMOS Octal Registered Transceiver With Dual Output and Clock Enables

With 5V-Tolerant Inputs and Outputs (3-State, Non-Inverting)

The MC74LCX2952 is a high performance, non-inverting octal registered transceiver operating from a 2.7 to 3.6V supply. High impedance TTL compatible inputs significantly reduce current loading to input drivers while TTL compatible outputs offer improved switching noise performance. A V_I specification of 5.5V allows MC74LCX2952 inputs to be safely driven from 5V devices. The MC74LCX2952 is suitable for memory address driving and all TTL level bus oriented transceiver applications.

Two 8-bit back to back registers store data from either of two bidirectional buses. Data applied to the inputs is entered and stored on the rising edge of the Clock (CAB, CBA) provided that the Clock Enable (CEAB, CEBA) is Low. The data is then presented at the 3-state output buffers, but is only accessible when the Output Enable (OEAB, OEBA) is Low. The operation of the MC74LCX2952 is symmetrical — A inputs to B outputs occurs in the same manner as B inputs to A outputs.

- Designed for 2.7 to 3.6V V_{CC} Operation
- 5V Tolerant — Interface Capability With 5V TTL Logic
- Supports Live Insertion and Withdrawal
- I_{OFF} Specification Guarantees High Impedance When $V_{CC} = 0V$
- LVTTTL Compatible
- LVCMOS Compatible
- 24mA Balanced Output Sink and Source Capability
- Near Zero Static Supply Current in All Three Logic States (10 μ A) Substantially Reduces System Power Requirements
- Latchup Performance Exceeds 500mA
- ESD Performance: Human Body Model >2000V; Machine Model >200V

3. These AC parameters are preliminary and may be modified prior to release. The maximum AC limits are design targets. Actual performance will be specified upon completion of characterization.
4. Skew is defined as the absolute value of the difference between the actual propagation delay for any two separate outputs of the same device. The specification applies to any outputs switching in the same direction, either HIGH-to-LOW (t_{OSHL}) or LOW-to-HIGH (t_{OSLH}); parameter guaranteed by design.
