

SN64BCT2241 OCTAL BUFFER AND LINE/MOS DRIVER WITH 3-STATE OUTPUTS

SCBS092A – JUNE 1990 – REVISED NOVEMBER 1993

- State-of-the-Art BiCMOS Design Significantly Reduces I_{CCZ}
- ESD Protection Exceeds 2000 V Per MIL-STD-883C, Method 3015; Exceeds 200 V Using Machine Model ($C = 200$ pF, $R = 0$)
- Output Ports Have Equivalent 33- Ω Series Resistors, So No External Resistors Are Required
- High-Impedance State During Power Up and Power Down
- 3-State Buffer-Type Outputs Drive Bus Lines Directly
- Package Options Include Plastic Small-Outline (DW) Packages and Standard Plastic 300-mil DIPs (N)

description

The SN64BCT2241 is a noninverting octal buffer and line/MOS driver designed specifically to improve both the performance and density of 3-state memory address drivers, clock drivers, and bus-oriented receivers and transmitters. Taken together with the SN64BCT2240 and SN64BCT2244, these devices provide the choice of selected combinations of inverting outputs, symmetrical \overline{OE} (active-low output-enable) inputs, and complementary OE and \overline{OE} inputs. These devices feature high fan-out and improved fan-in.

The SN64BCT2241 features complementary output-enable ($\overline{1OE}$ and 2OE) inputs. The 1Y outputs are active (high or low) when the active-low enable $\overline{1OE}$ is low. When $\overline{1OE}$ is high, the 1Y outputs are in the high-impedance state. The 2Y outputs are active when 2OE is high and in the high-impedance state when 2OE is low.

The outputs, which are designed to source or sink up to 12 mA, include 33- Ω series resistors to reduce overshoot and undershoot.

The SN64BCT2241 is characterized for operation from -40°C to 85°C and 0°C to 70°C .

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[†]

Supply voltage range, V_{CC}	–0.5 V to 7 V
Input voltage range, V_I (see Note 1)	–0.5 V to 7 V
Voltage range applied to any output in the disabled or power-off state, V_O	–0.5 V to 5.5 V
Voltage range applied to any output in the high state, V_O	–0.5 V to V_{CC}
Input clamp current, I_{IK} ($V_I < 0$)	–30 mA
Current into any output in the low state, I_O	60 mA
Operating free-air temperature range	–40°C to 85°C
Storage temperature range	–65°C to 150°C

[†] Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
