SN54CBT3383, SN74CBT3383 10-BIT FET BUS-EXCHANGE SWITCHES

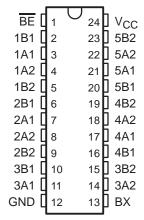

SCDS003K - NOVEMBER 1992 - REVISED MAY 2000

- Functionally Equivalent to QS3383 and QS3L383
- 5- Ω Switch Connection Between Two Ports
- **TTL-Compatible Input Levels**
- **Package Options Include Plastic** Small-Outline (DW), Shrink Small-Outline (DB, DBQ), Thin Very Small-Outline (DGV), and Thin Shrink Small-Outline (PW) Packages, Ceramic DIPs (JT), and Ceramic Flat (W) Package

description

The 'CBT3383 devices provide ten bits of high-speed TTL-compatible bus switching or exchanging. The low on-state resistance of the switch allows connections to be made with minimal propagation delay.

SN54CBT3383 . . . JT OR W PACKAGE SN74CBT3383...DB, DBQ, DGV, DW, OR PW PACKAGE (TOP VIEW)

The devices operate as a 10-bit bus switch or a 5-bit bus exchanger, which provides swapping of the A and B pairs of signals. The bus-exchange function is selected when BX is high. The switches are connected when BE is low.

The SN54CBT3383 is characterized for operation over the full military temperature range of –55°C to 125°C. The SN74CBT3383 is characterized for operation from 0°C to 70°C.

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

2. The package thermal impedance is calculated in accordance with JESD 51.

The propagation delay is the calculated RC time constant of the typical on-state resistance of the switch and the specified load capacitance, when driven by an ideal voltage source (zero output impedance).

[‡]This is the increase in supply current for each input that is at the specified TTL voltage level rather than V_{CC} or GND.

[§] Measured by the voltage drop between the input terminal and the output terminal at the indicated current through the switch. On-state resistance is determined by the lowest voltage of the two (A or B) terminals.

PARAMETER MEASUREMENT INFORMATION

NOTES: A. C_L includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR \leq 10 MHz, $Z_O = 50 \,\Omega$, $t_f \leq 2.5 \,\text{ns}$.
- D. The outputs are measured one at a time with one transition per measurement.
- E. t_{PLZ} and t_{PHZ} are the same as t_{dis} .
- F. t_{PZL} and t_{PZH} are the same as t_{en} .
- G. tplH and tpHL are the same as tpd.
