

# SN74CBTS3306 DUAL FET BUS SWITCH WITH SCHOTTKY DIODE CLAMPING

SCDS029F – JANUARY 1996 – REVISED MAY 2000

- 5-Ω Switch Connection Between Two Ports
- TTL-Compatible Input Levels
- Package Options Include Plastic Small-Outline (D) and Thin Shrink Small-Outline (PW) Packages

D OR PW PACKAGE  
(TOP VIEW)

## description

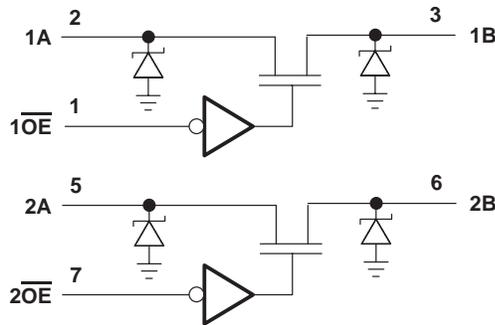

The SN74CBTS3306 features independent line switches with Schottky diodes on the I/Os to clamp undershoot. Each switch is disabled when the associated output-enable ( $\overline{OE}$ ) input is high.

The SN74CBTS3306 is characterized for operation from  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ .

FUNCTION TABLE  
(each bus switch)

INPUT $\overline{OE}$	FUNCTION
L	A port = B port
H	Disconnect

## logic diagram (positive logic)

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

## DUAL FET BUS SWITCH

### WITH SCHOTTKY DIODE CLAMPING

SCDS029F – JANUARY 1996 – REVISED MAY 2000

#### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, $V_{CC}$	–0.5 V to 7 V
Input voltage range, $V_I$ (see Note 1)	–0.5 V to 7 V
Continuous channel current	128 mA
Input clamp current, $I_{IK}$ ( $V_{I/O} < 0$ )	–50 mA
Package thermal impedance, $\theta_{JA}$ (see Note 2): D package	97°C/W
PW package	149°C/W
Storage temperature range, $T_{stg}$	–65°C to 150°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.  
2. The package thermal impedance is calculated in accordance with JESD 51.

#### recommended operating conditions (see Note 3)

	MIN	MAX	UNIT
$V_{CC}$ Supply voltage	4	5.5	V
$V_{IH}$ High-level control input voltage	2		V
$V_{IL}$ Low-level control input voltage		0.8	V
$T_A$ Operating free-air temperature	–40	85	°C

NOTE 3: All unused control inputs of the device must be held at  $V_{CC}$  or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.

#### electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS		MIN	TYP‡	MAX	UNIT
$V_{IK}$	A or B inputs	$V_{CC} = 4.5$ V, $I_I = -18$ mA			–0.7	V
	Control inputs				–1.2	
$I_I$	$I_{IL}$	$V_{CC} = 5.5$ V, $V_I = GND$			–1	$\mu$ A
	$I_{IH}$	$V_{CC} = 5.5$ V, $V_I = 5.5$ V			50	
$I_{CC}$		$V_{CC} = 5.5$ V, $I_O = 0$ , $V_I = V_{CC}$ or GND			3	$\mu$ A
$\Delta I_{CC}$ §	Control inputs	$V_{CC} = 5.5$ V, One input at 3.4 V, Other inputs at $V_{CC}$ or GND			2.5	mA
$C_i$	Control inputs	$V_I = 3$ V or 0			5	pF
$C_{io(OFF)}$		$V_O = 3$ V or 0, $\overline{OE} = V_{CC}$			6	pF
$r_{on}$ ¶	$V_{CC} = 4$ V, TYP at $V_{CC} = 4$ V	$V_I = 2.4$ V, $I_I = 15$ mA		14	20	$\Omega$
		$V_I = 0$ , $I_I = 64$ mA		5	7	
	$V_{CC} = 4.5$ V	$V_I = 0$ , $I_I = 30$ mA		5	7	
		$V_I = 2.4$ V, $I_I = 15$ mA		10	15	

‡ All typical values are at  $V_{CC} = 5$  V (unless otherwise noted),  $T_A = 25^\circ$ C.

§ This is the increase in supply current for each input that is at the specified TTL voltage level rather than  $V_{CC}$  or GND.

¶ Measured by the voltage drop between the A and B pin at the indicated current through the switch. On-state resistance is determined by the lower of the voltages of the two (A or B) pins.

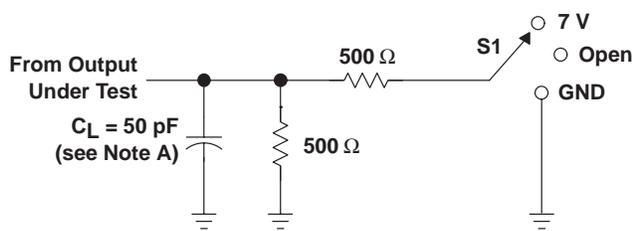

switching characteristics over recommended operating free-air temperature range,  $C_L = 50$  pF (unless otherwise noted) (see Figure 1)

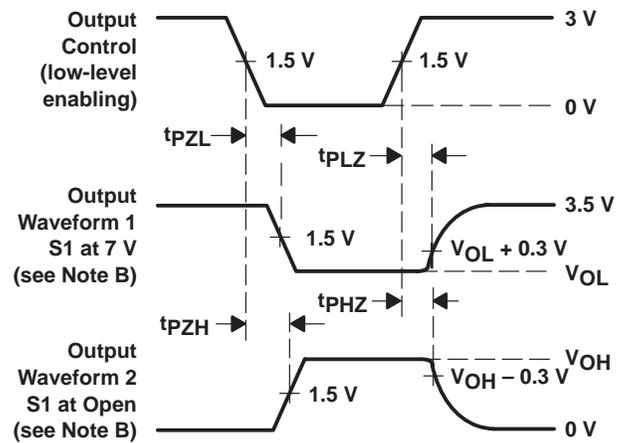

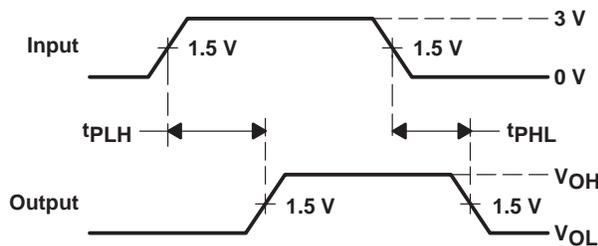

PARAMETER	FROM (INPUT)	TO (OUTPUT)	$V_{CC} = 4$ V		$V_{CC} = 5$ V $\pm 0.5$ V		UNIT
			MIN	MAX	MIN	MAX	
$t_{pd}^\dagger$	A or B	B or A	0.35		0.25		ns
$t_{en}$	$\overline{OE}$	A or B	5.6		1.8	5	ns
$t_{dis}$	$\overline{OE}$	A or B	4.6		1	4.3	ns

† The propagation delay is the calculated RC time constant of the typical on-state resistance of the switch and the specified load capacitance, when driven by an ideal voltage source (zero output impedance).

### PARAMETER MEASUREMENT INFORMATION

TEST	S1
$t_{pd}$	Open
$t_{PLZ}/t_{PZL}$	7 V
$t_{PHZ}/t_{PZH}$	Open

- NOTES:
- A.  $C_L$  includes probe and jig capacitance.
  - B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
  - C. All input pulses are supplied by generators having the following characteristics:  $PRR \leq 10$  MHz,  $Z_O = 50 \Omega$ ,  $t_r \leq 2.5$  ns,  $t_f \leq 2.5$  ns.
  - D. The outputs are measured one at a time with one transition per measurement.
  - E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
  - F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
  - G.  $t_{PHL}$  and  $t_{PLH}$  are the same as  $t_{pd}$ .

## **IMPORTANT NOTICE**

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgment, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Customers are responsible for their applications using TI components.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
