### Data Classification

### Maximum Ratings

Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit.

### Characteristics

The listed characteristics are ensured over the operating range of the integrated circuit. Typical characteristics specify mean values expected over the production spread. If not otherwise specified, typical characteristics apply at TA = 25 °C and the given supply voltage.

### Operating Range

In the operating range the functions given in the circuit description are fulfilled.

For detailed technical information about "Processing Guidelines" and "Quality Assurance" for ICs, see our Product Overview "ICs for Communications"

### Edition 7.96

This edition was realized using the software system FrameMaker®.

As far as patents or other rights of third parties are concerned, liability is only assumed for components per se, not for applications, processes and circuits implemented within components or assemblies.

The information describes the type of component and shall not be considered as assured characteristics.

Terms of delivery and rights to change design reserved.

For questions on technology, delivery, and prices please contact the Offices of Semiconductor Group in Germany or the Siemens Companies and Representatives worldwide. (see address list).

Due to technical requirements components may contain dangerous substances. For information on the type in question please contact your nearest Siemens Office, Semiconductor Group.

Siemens AG is an approved CECC manufacturer.

Preliminary Data

Bipolar IC

### Functional Description, Application

The IC is designed for use in mobile radio communication devices up to 2100 MHz and upconversion systems up to 2500 MHz.

Due to its low power consumption and low phase noise generation it is suitable for the use in battery powered handheld systems, e.g. PCN, DECT and wireless LANs.

Low supply voltage down to 2.7V.

It can be switched to a low-power standby mode.

Internal current source at the emitter follower output. No external resistor needed in typical applications.

The divide ratio is 1:64/65 or 1:128/129 depending on the external circuit configuration.

## Circuit Description

The differential inputs of the IC may be connected either balanced or single ended. In the latter case the unused input must be RF-grounded with a capacitor (about 10 pF) with a low serial inductance.

Depending on the logic level at SW input the basic divide ratio of the ECL-stages is fixed to 1:64/65 or 1:128/129. The MOD input determines whether modulus 1:n or 1:n+1 (n=64 or 128 according to SW-level) is active.

The IC can be switched to a low-power standby mode (input STB).

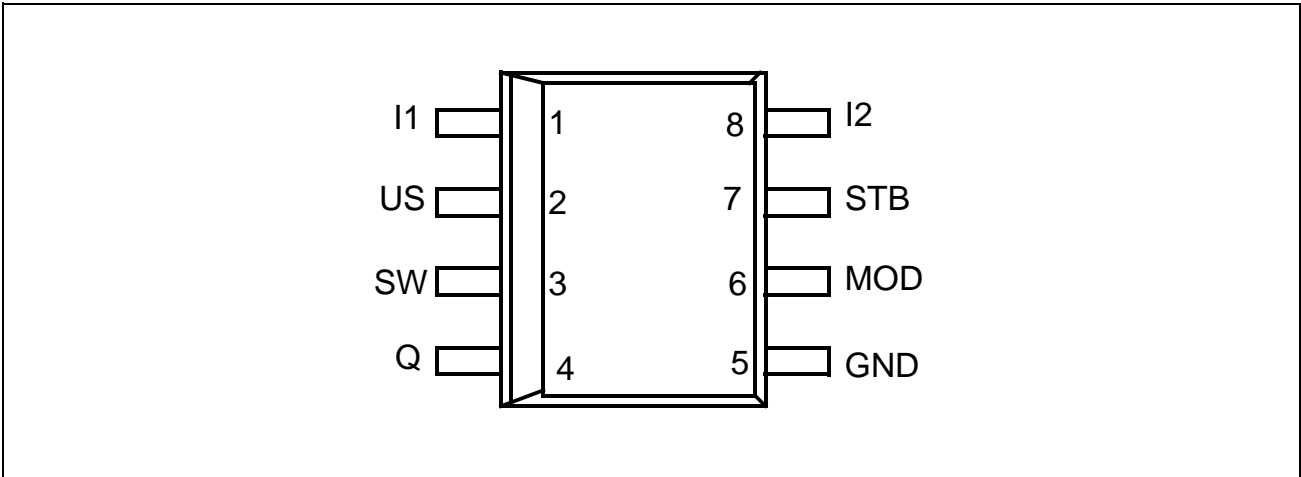

The MOD input is TTL/CMOS compatible.

The emitter follower output is CMOS compatible according to the application circuit on page 11. The minimum logic swing is  $0.8 V_{pp}$ .

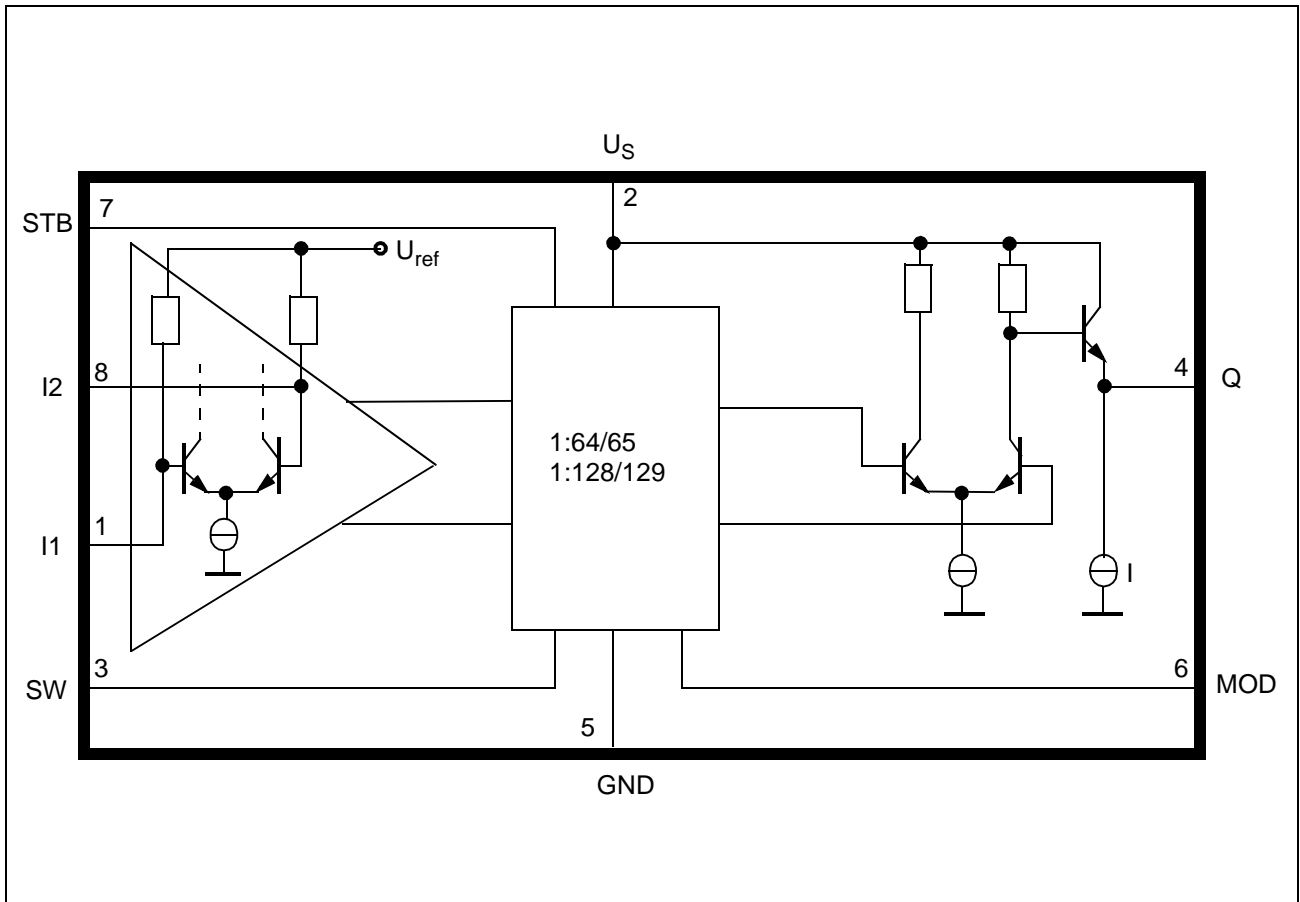

## Function table

Input pin	Logic level	Prescaler function
<b>SW</b>	HIGH = $U_S - 0.1 V$ to $U_S$ LOW = GND to 0.8 V or open	1:64/65 1:128/129
<b>MOD</b>	HIGH = 2.0 V to $U_S$ or open LOW = GND to 0.8 V	1:64/1:128 1:65/1:129
<b>STB</b>	HIGH = $U_S - 0.1 V$ to $U_S$ LOW = GND to 0.8 V	Divider Q=HIGH, STANDBY-mode

## Pin Assignment

- Pin 1 RF-input I1
- Pin 2 supply voltage  $U_S$
- Pin 3 divide ratio 1:64/65 - 1:128/129 control input (SW)
- Pin 4 output Q
- Pin 5 GND
- Pin 6 modulus 1:n/n+1 (n=64 or 128) control input (MOD)
- Pin 7 standby mode control input (STB)
- Pin 8 RF-input I2

**Block Diagram**

### Absolute Maximum Ratings

$T_A = -40$  to  $85$  °C

Parameter	Symbol	Limit Values		Unit	Remarks
		min.	max.		
Supply voltage	$U_S$	-0.3	6	V	
Input level (Pin 1; Pin 8)	$U_I$		2	V	$U_S=0V$
Voltage swing (Pin 1 to 8)	$U_{I18}$	-2	2	V	
Input level (Pin 3; Pin 6; Pin 7)	$U_{SW},$ $U_{MOD},$ $U_{STB},$	-0.3	$U_S+0.7V$ or $5.5V$ if $U_S+0.7V >$ $5.5V$	V	$U_S=2.7...5.5V$
Output level (Pin 4)	$U_Q$		$U_S$	V	
Output current (Pin 4)	$-I_Q$		5	mA	
Junction temperature	$T_j$		125	°C	
Storage temperature	$T_S$	-65	125	°C	
Thermal resistance system-ambient	$R_{thsa}$		185	K/W	

The maximum ratings may not be exceeded under any circumstances, not even momentarily and individually, as permanent damage to the IC will result.

**ESD-integrity ( according MIL-STD 883D, Meth. 3015.7): 500V**

### Operating Range

Parameter	Symbol	Limit Values		Unit	Remarks
		min.	max.		
Supply Voltage	$U_S$	2.7	5.5	V	
Input frequency	$f$	100	2300	MHz	
Ambient temperature	$T_A$	-40	85	°C	

Within the operational range the IC operates as described in the circuit description. The AC / DC characteristic limits are not guaranteed.

## AC/DC Characteristics

Supply voltage  $V_S=2.7$  to  $5.5V$

Ambient temperature  $T_A = -20$  to  $85$  °C (referred to the test circuit)

Parameter	Symbol	Limit Values			Unit	Test Condition
		min.	typ.	max.		

### Supply Current

Supply current normal operation	$I_S$		2.7	3.3	mA	inputs RF-grounded, $U_S=2.7$ , $T_A = 25$ °C, STB= $V_S$ output open
	$I_S$		2.8	3.4	mA	inputs RF-grounded, $U_S=4.0$ , $T_A = 25$ °C, STB= $V_S$ output open
	$I_S$		2.9	3.5	mA	inputs RF-grounded, $V_S=5.5$ , $T_A = 25$ °C, STB= $V_S$ output open
Supply current standby-mode	$I_{STB}$			0.1	mA	inputs RF-grounded, output open, STB = GND

### RF Input I1,I2

Input level dynamic range	$P_{in}$	-20		4	dBm	100-1500MHz (sine wave)
	$P_{in}$	-20		-3	dBm	2100 MHz ( diagram 2 )

### Output Q

Output logic swing	$U_Q$	1	1.1		$V_{PP}$	$C_L \leq 12pF$ , $R_L=2k\Omega$
	$U_Q$	0.8	1.1		$V_{PP}$	$C_L \leq 8pF$
Internal current source	$I$		400		$\mu A$	see block diagram

### Divider Ratio Control Input SW

Voltage high	$V_{SWH}$	$V_S-0.1$		$V_S$	V	
Voltage low	$V_{SWL}$	GND		0.8	V	
Input current high	$I_{SWH}$			60	$\mu A$	SW= $V_S$
Input current low	$-I_{SWL}$			30	$\mu A$	SW=GND

### Modulus Control Input MOD

Voltage high	$V_{MODH}$	2.3		$V_S$	V	
Voltage low	$V_{MODL}$	GND		0.8	V	
Input current high	$I_{MODH}$			50	$\mu A$	MOD= $V_S$
Input current low	$-I_{MODL}$			120	$\mu A$	MOD=GND

AC /DC characteristics involve the spread of values guaranteed within the specified supply voltage and ambient temperature range. Typical characteristics are the median of the production.

## AC/DC Characteristics

**Supply voltage**  $V_S=2.7$  to  $5.5V$

**Ambient temperature**  $T_A = -20$  to  $85$  °C (referred to the test circuit)

Parameter	Symbol	Limit Values			Unit	Test Condition
		min.	typ.	max.		

### Standby Mode Control Input STB

Voltage high	$V_{STBH}$	$U_S-0.1$		$V_S$	V	
Voltage low	$V_{STBL}$	GND		0.8	V	
Input current high	$I_{STBH}$			30	$\mu A$	STB= $V_S$
Input current low	$-I_{STBL}$			60	$\mu A$	STB=GND

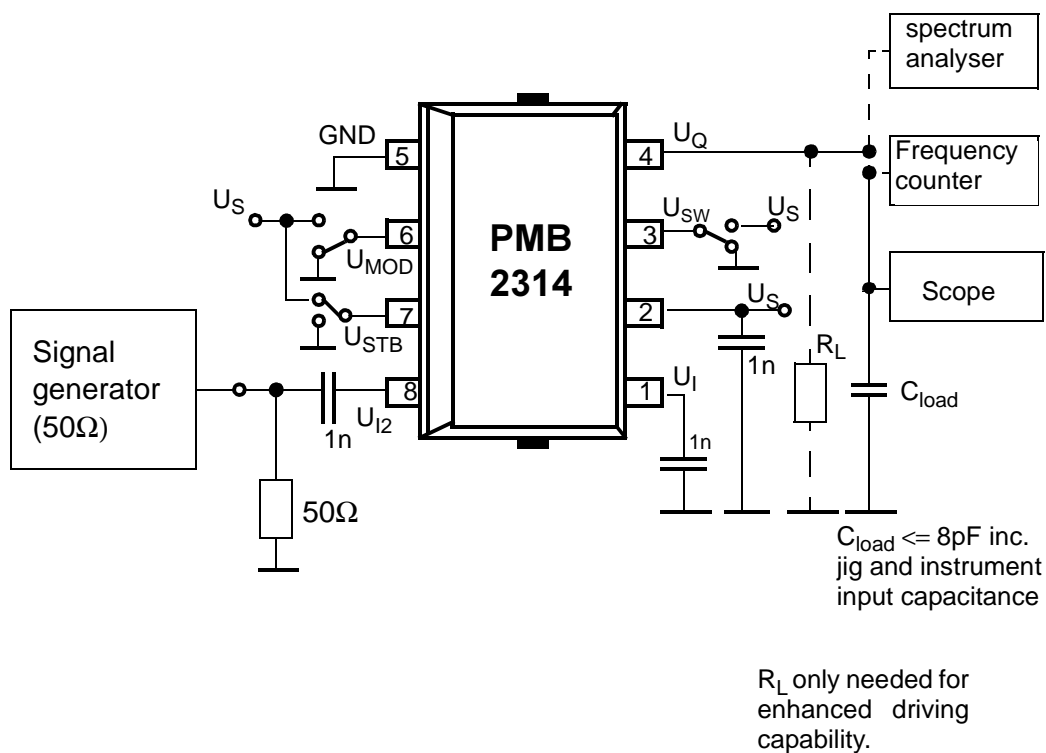

### Delay times

MOD setup time (diagram 1)	$t_{set}$		8	14	ns	
----------------------------	-----------	--	---	----	----	--

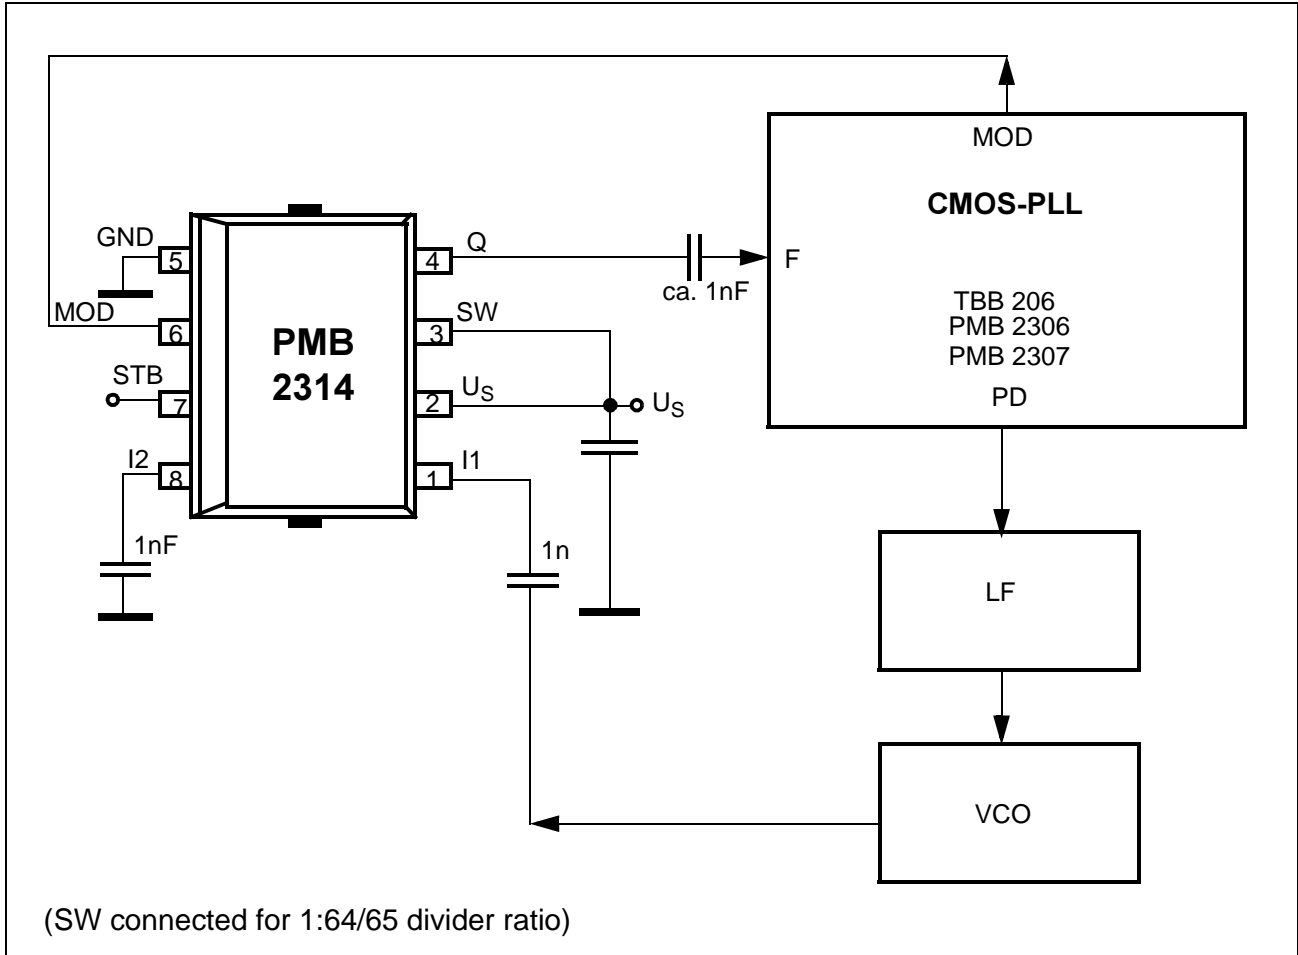

AC /DC characteristics involve the spread of values guaranteed within the specified supply voltage and ambient temperature range. Typical characteristics are the median of the production.
