Celeritek Broadband Power Chips

Celeritek Medium Power Chips are GaAs MESFETs which include the CF003-01, CF005-01 and CF010-01 models. They are 600 μm , 1200 μm and 2400 μm gate width, respectively. All have sub-half-micron gate lengths, Celeritek's proprietary Silicon Nitride passivation, and are fabricated on ion implanted wafers.

Celeritek's Wafer Qualification Procedure for these devices consists of DC, RF and reliability testing of both individual die and generic 6 to 18 GHz amplifier modules.

Celeritek's broadband power chips make up a family of GaAs FET devices which have high broadband gain and provide up to 1 watt in balanced 6 to 18 GHz amplifier circuits. These devices are also suitable for high power oscillators. In narrow band applications they offer superior associated gain.

These devices are available in chip form and are suitable for airborne, shipboard and ground-based equipment. Screening includes MIL-STD-750 Class B, Class S and commercial screening. These devices are also available in packaged form. Please consult the Packaged Power GaAs FET data sheets or contact the factory for further information.

Die Attach and Bonding Procedures

Die Attach: Eutectic die attach is recommended. For eutectic die attach: Preform: AuSn (80% Au, 20% Sn); Stage Temperature: 290 $^\circ\text{C}$, $\pm 5^\circ\text{C}$; Handling Tool: Tweezers; Time: 1 min or less.

Wire Bonding: Wire Size: 0.7 to 1.0 mil in diameter (pre-stressed); Thermocompression bonding is preferred over thermosonic bonding. For thermocompression bonding: Stage Temperature: 250 $^\circ\text{C}$; Bond Tip Temperature: 150 $^\circ\text{C}$; Bonding Tip Pressure: 18 to 40 gms depending on size of wire.
