- Note 1: If the device is powered up below -20°C and then the ambient temperature rises 105°C during normal operation, the output will be interrupted for approximately 2-3 ms. A correction is in process and will be available Q1 2007
- Note 2: Contact factory for exact frequency availability over 945 MHz.
- Note 3: APR specification is inclusive of initial tolerance, deviation over temperature, shock, vibration, supply voltage, and aging for one year at 50°C mean ambient temperature.
- Note 4: See Load Circuit Diagram in this Datasheet. Consult factory with nonstandard output load requirements.
