3D Surround Audio Processor with Dynamic Bass Boost

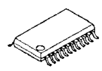
■ GENERAL DESCRIPTION

The **NJM2706** is the 3D surround audio processor with dynamic bass boost, regenerates rich sound field with only small two speakers.

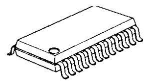
The **NJM2706** performs NJRC original surround technology realizing natural surround sound field regarded center orientation and NJRC original dynamic bass boost technology provides graceful bass sound with low distortion.

It is suitable for mini-component, CD radio-cassette, TV, speaker system and others.

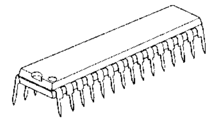
■ PACKAGE OUTLINE



NJM2706VE1



NJM2706M



NJM2706L

■ FEATURES

- Operating Voltage +4.7V to +13.0V
- Wide Dynamic Range 3.1Vrms typ.
- Low Output Noise 8.9µVrms typ.
- "eala" 3D Surround Function (Stereo only)
- Dynamic Bass Boost Function
- High Frequency Compensation (f=10kHz, GV=+3dB)
- Variable Surround Effect by external resistor
- Internal Mode Control Switch
- Bipolar Technology
- Package Outline DMP24, SSOP24, SDIP30

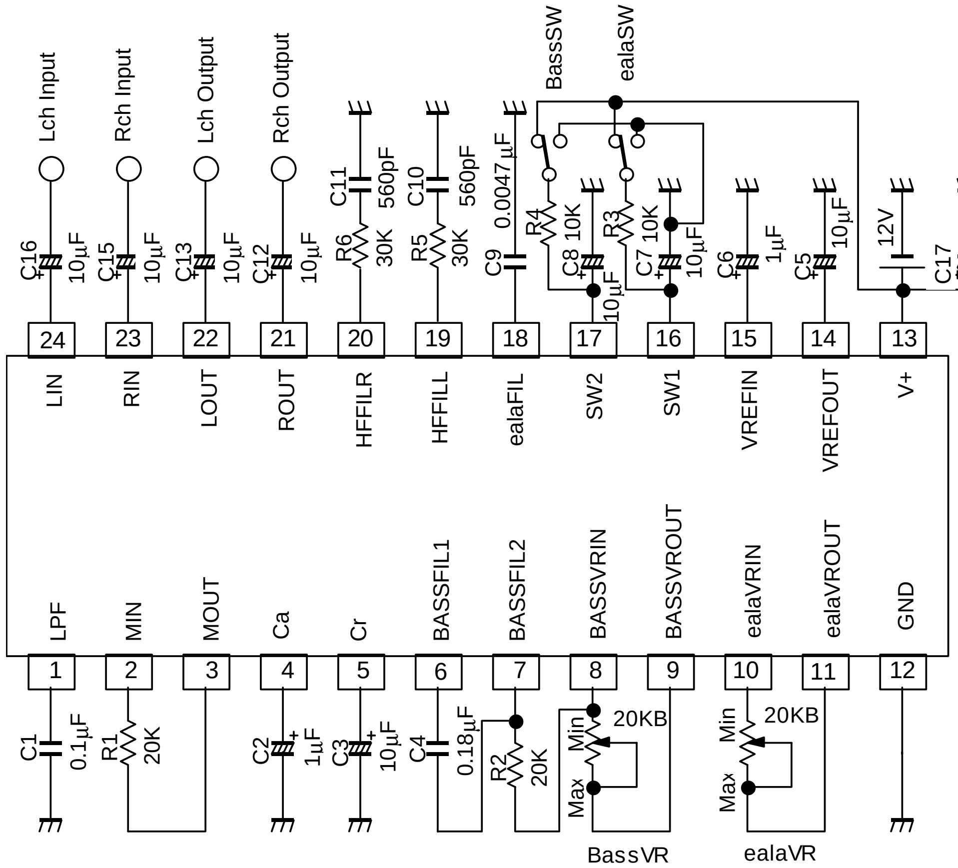
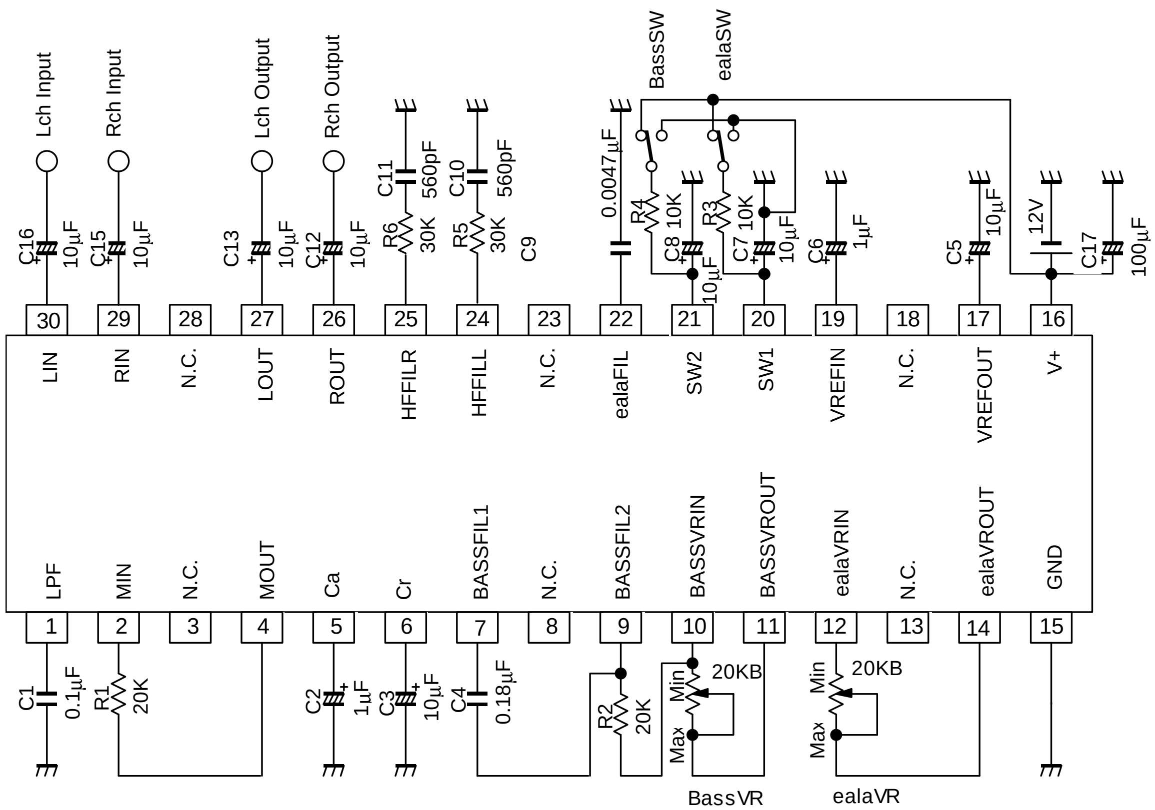
■APPLICATION CIRCUIT

(DMP24, SSOP24)



(SDIP30)



■APPLICATION NOTE

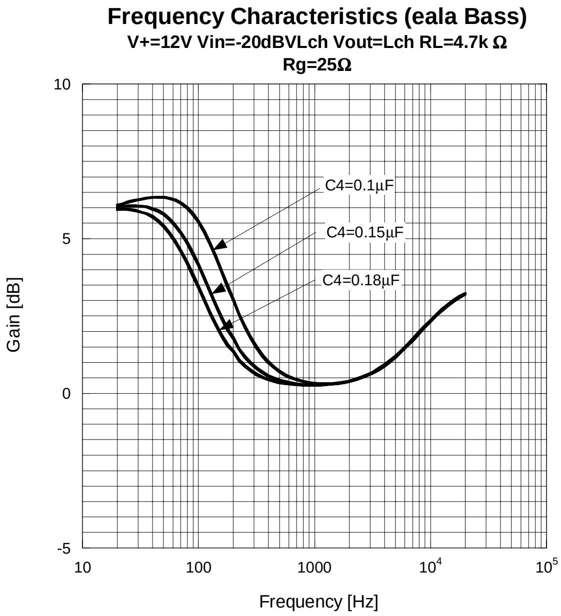
1. Fine-Tuning the ealaBASS

The NJM2706 has quite sophisticated NJRC's original dynamic bass-boost technology. Both of the level and the frequency for bass-boost moves automatically corresponding to the input signal level. This dynamic filtering action prevents the signals over boosted, and provides less distortion and wide dynamic range bass-boost processing.

In addition, if you want to fine-tune the bass-boost effect for your system, you can modify the bass-boost effect by changing the external parts value as described below.

1-1. Modify the Boost Center Frequency

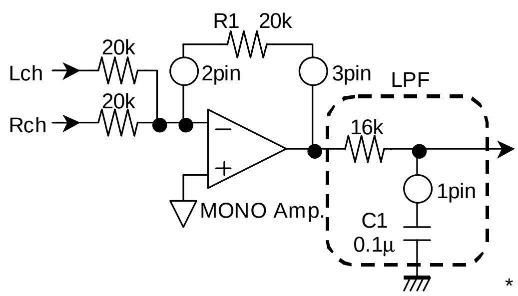
This plot shows the frequency response for NJM2706 ealaBASS.



The Boost Center Frequency can be adjusted by changing the value for the external capacitor, C4.
If your speaker system has more than 100Hz of f_0 (= Lower Frequency Response Range), or, if you would like to get more powerful bass-boost effect than the typical settings shown on the page 9, increasing the Boost Center Frequency higher could be a good idea. We strongly recommend you to determine the actual capacitance value by testing and examinations on your actual application.

1-2. Modification for the LPF Cut-off Frequency f_{CL}

This picture shows the equivalent circuit for NJM2706's LPF.



* The pin numbers apply in DMP24 and SSOP24's case.

The LPF Cut-off Frequency f_{CL} is given by the following equation:

$$f_{CL}= \frac{1}{2\pi CR} = \frac{1}{2\pi C1\times 16k}$$

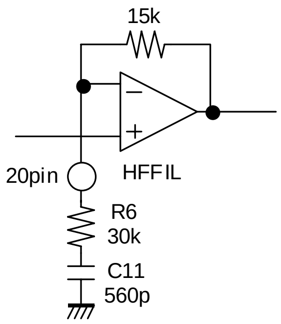
Set the f_{CL} as same as the Boost Center Frequency, which is determined as above (The Boost Center Frequency = the frequency of which the gain is +3dB). In the typical application circuit shown on the page 9, the LPF Cut-off Frequency f_{CL} is set to 100Hz.

1-3. Adjusting the Summing Level for ealaBASS effect to L/R Output Signal

Changing the resistance value connected between the terminal 8 and 9 can modify the Summing Level for the ealaBASS effect to the L/R Output Signal.

2. Adjusting the High Frequency Compensation Filter

The NJM2706 has High Frequency Compensation Filter, which can produce well balance between boosted–bass frequency range and treble frequency range. This picture shows the equivalent circuit for the High Frequency Compensation Filter.



* The pin numbers apply in DMP24 and SSOP24's case.

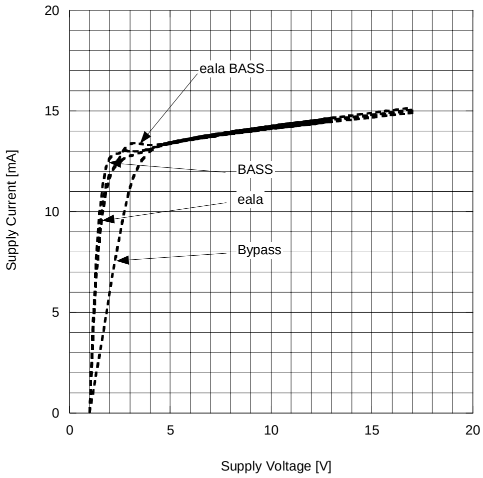
The Cut-off Frequency f_{CH} and the Voltage Gain G_{VH} are defined as below:

$$f_{CH} = \frac{1}{2\pi CR} = \frac{1}{2\pi \times C11 \times R6} \qquad G_{VH} = 20\log\frac{R6+15k}{R6}$$

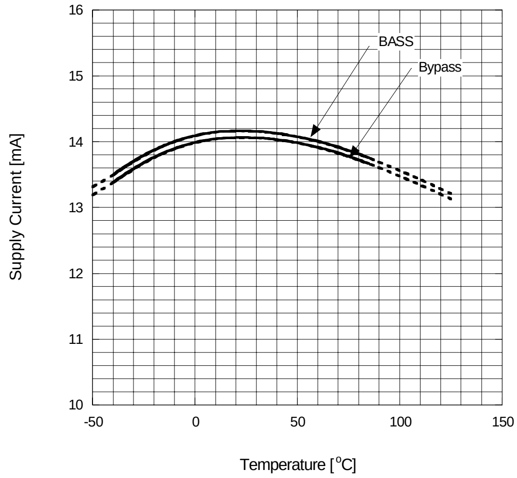
In the typical application circuit shown on the page 9, the High Frequency Compensation Filter Cut-off Frequency f_{CH} is set to 10kHz and Voltage Gain G_{VH} is set to 3.5dB.

■TYPICAL CHARACTERISTICS

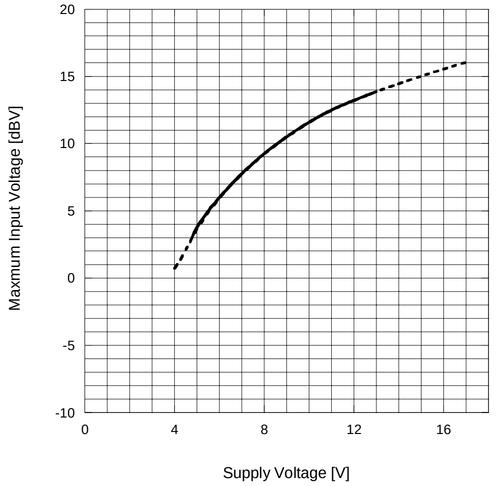
Supply Current vs. Supply Voltage
V+=1-13V, Ta=25°C



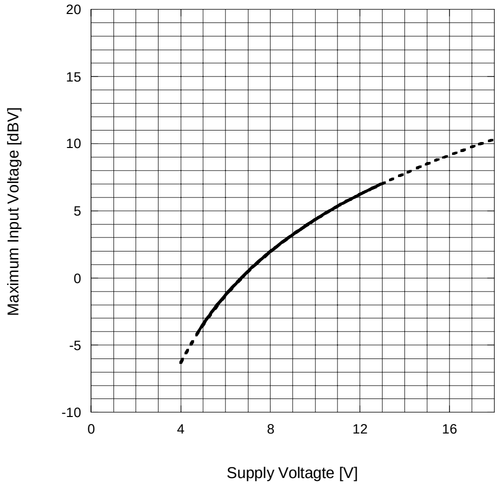
Supply Current vs. Temperature
V+=12V



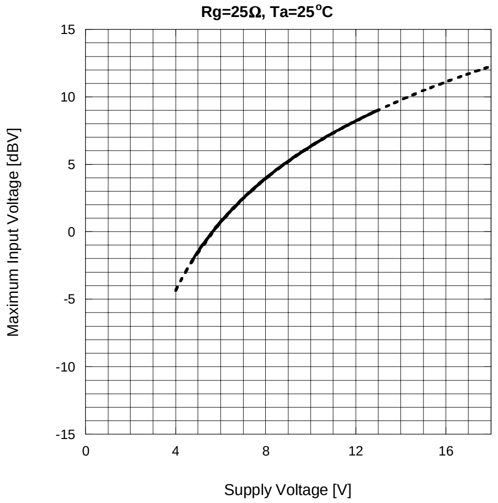
Maximum Input Voltage vs. Supply Voltage (Bypass)
Vin=Lch, Vout=Lch, f=1kHz, RL=4.7k Ω,
Rg=25Ω, Ta=25°C



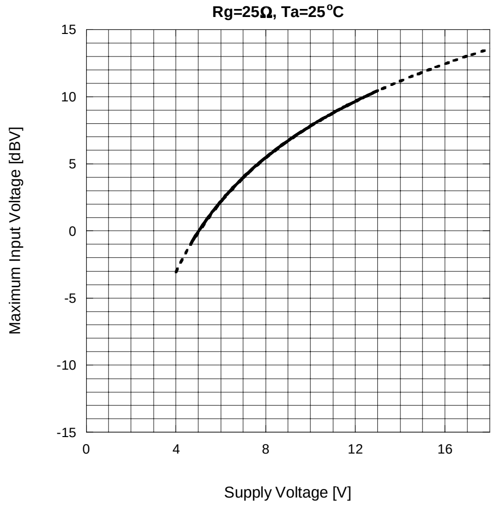
Maximum Input Voltage vs. Supply Voltage (BASS)
Vin=Lch+Rch, Vout=BASSVROUT, f=100Hz, RL=4.7k Ω,
Rg=25Ω, Ta=25°C



Maximum Input Voltage vs. Supply Voltage (eala)
Vin=Lch, Vout=Lch, f=1kHz, RL=4.7k Ω,
Rg=25Ω, Ta=25°C

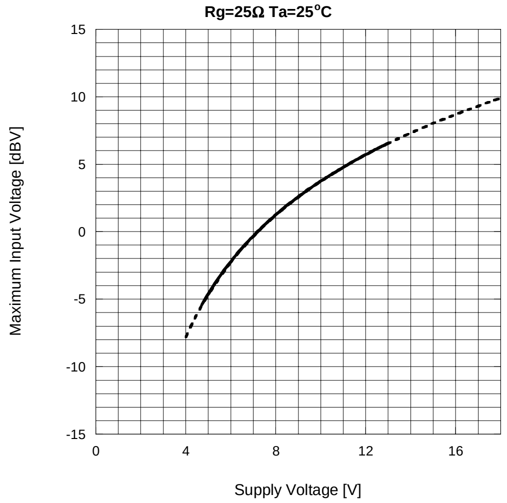


Maximum Input Voltage (eala BASS)
Vin=Lch, Vout=Lch, f=10kHz, RL=4.7k Ω,
Rg=25Ω, Ta=25°C

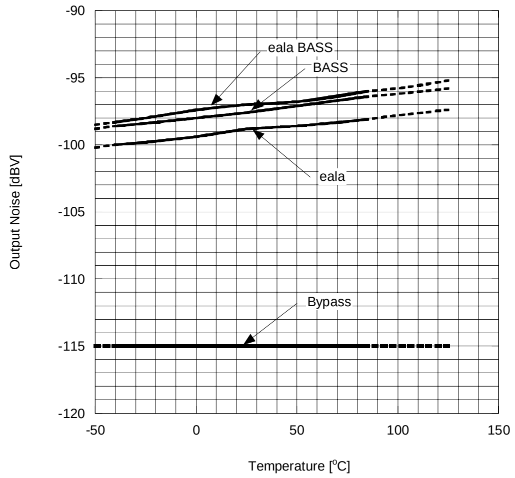


■ TYPICAL CHARACTERISTICS

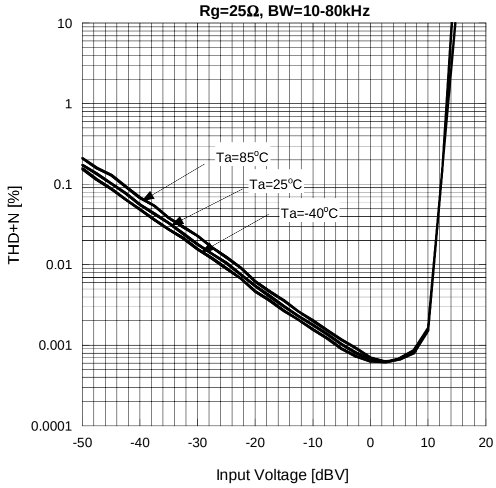
Maximum Input Voltage vs. Supply Voltage (eala BASS)
Vin=Lch+Rch, Vout=Lch, f=100Hz, RL=4.7k Ω,
Rg=25Ω Ta=25°C



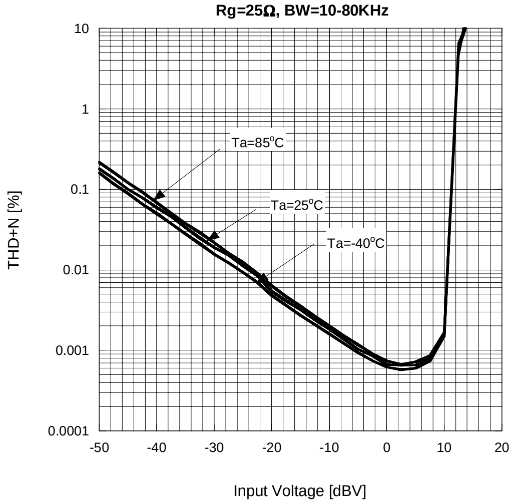
Output Noise vs. Temperature
V+=12V, Vin=GND, Vout=Lch



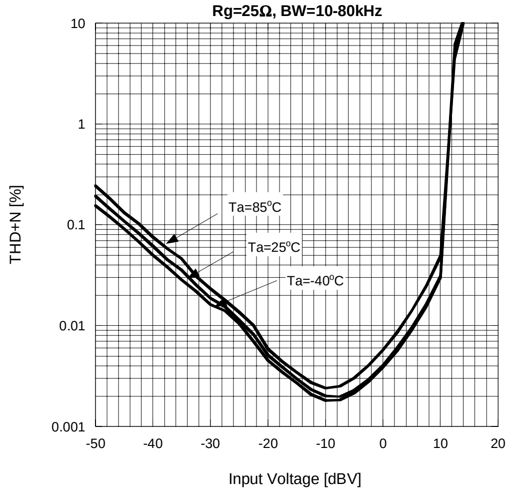
THD+N vs. Input Voltage (Bypass)
V+=12V, Vin=Lch, Vout=Lch, f=100Hz, RL=4.7k Ω,
Rg=25Ω, BW=10-80kHz



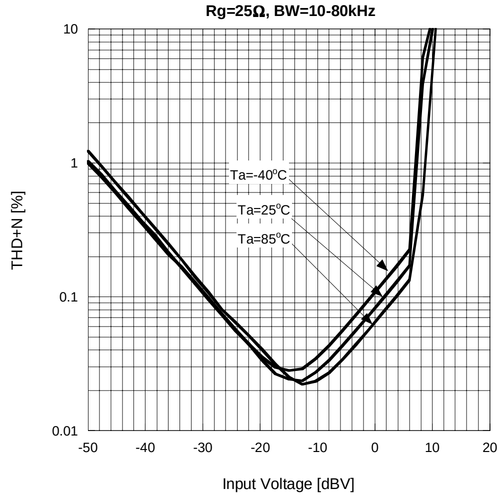
THD+N vs. Input Voltage (Bypass)
V+=12V, Vin=Lch, Vout=Lch, f=1kHz, RL=4.7k Ω,
Rg=25Ω, BW=10-80KHz



THD+N vs. Input Voltage (Bypass)
V+=12V, Vin=Lch, Vout=Lch, f=10kHz, RL=4.7k Ω,
Rg=25Ω, BW=10-80kHz



THD+N vs. Input Voltage (eala)
V+=12V, Vin=Lch, Vout=Lch, f=1kHz, RL=4.7k Ω,
Rg=25Ω, BW=10-80kHz



■ TYPICAL CHARACTERISTICS

THD+N vs. Input Voltage (eala BASS)
V+=12V, Vin=Lch, Vout=Lch, f=100Hz, RL=4.7k Ω, Rg=25Ω, BW=10-80kHz
