FEBRUARY 2007 REV. P1.0.3

GENERAL DESCRIPTION

FUNCTIONAL DESCRIPTION

XRK32308 is a 3.3V Zero Delay Buffer designed to distribute high-speed clocks in PC, workstation, datacom, telecom, and other high-performance applications.

The part has an on-chip PLL which locks to an input clock presented on the REF pin. The PLL feedback is required to be driven into the FB pin, and can be obtained from one of the outputs. The input-to-output skew is guaranteed to be less than 350 ps, and output-to-output skew is guaranteed to be less than 200 ps.

XRK32308 has two banks of four outputs each. These can be controlled by the Select inputs as shown in Table 2, "Select Input Decoding," on page 2. If all output clocks are not required, Bank B can be three-stated. The select inputs also allow the input clock to be directly applied to the output for chip and system testing purposes.

Multiple XRK32308 devices can accept the same input clock and distribute it in a system. In this case, the skew between the outputs of two devices is guaranteed to be less than 700 ps.

XRK32308 devices are available in five different configurations, as shown in Table 3, "Available XRK32308 Configurations," on page 3.

The XRK32308–1 is the base part, where the output frequencies equal the reference if there is no counter in the feedback path.

The XRK32308–1H is the high-drive version of the –

1. Rise and fall times on this device are faster.

The XRK32308–2 allows the user to obtain 1X, and 2X or X/2 depending on which Bank sources the FB signal.

The XRK32308–3 allows the user to obtain 4X and 2X frequencies or 1X and 2X.

The XRK32308-4 enables the user to obtain 2X clocks on all outputs.

The XRK32308–5H is a high-drive version with REF/2 on both banks.

FEATURES

- Zero input-output propagation delay, adjustable by capacitive load on FB input
- Multiple configurations, see "Available XRK32308 Configurations" table
- Multiple low-skew outputs
- Two banks of four outputs, three-stateable by two select inputs
- 10-MHz to 120-MHz operating range
- 75ps typical cycle-to-cycle jitter (15pF, 66MHz)
- Space-saving 16-pin 150-mil SOIC package, 16-pin TSSOP or 16-pin QFN
- 3.3V operation
- Industrial and commercial temperature available

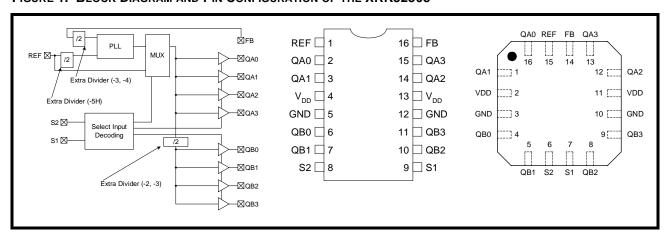

TABLE 1: PIN DESCRIPTION

Pi	N	SIGNAL	DESCRIPTION
SOIC/TSSOP	QFN	SIGNAL	DESCRIPTION
1	15	REF ^[1]	Input reference frequency
2	16	QA0 ^[2]	Clock output, Bank A
3	1	QA1 ^[2]	Clock output, Bank A
4	2	V _{DD}	3.3V supply
5	3	GND	Ground
6	4	QB0 ^[2]	Clock output, Bank B
7	5	QB1 ^[2]	Clock output, Bank B
8	6	S2 ^[3]	Select input, bit 2
9	7	S1 ^[3]	Select input, bit 1
10	8	QB2 ^[2]	Clock output, Bank B
11	9	QB3 ^[2]	Clock output, Bank B
12	10	GND	Ground
13	11	V _{DD}	3.3V supply
14	12	QA2 ^[2]	Clock output, Bank A
15	13	QA3 ^[2]	Clock output, Bank A
16	14	FB	PLL feedback input

TABLE 2: SELECT INPUT DECODING

S2	S1	QA0-QA3	QB0-QB3	OUTPUT SOURCE
0	0	Three-State	Three-State	PLL
0	1	Driven Three-State		PLL
1	0	Driven ^[4]	Driven ^[4]	Reference
1	1	Driven	Driven	PLL

NOTES:

- 1. Weak pull-down.
- 2. Weak pull-down on all outputs.
- 3. Weak pull-ups on these inputs.
- 4. Outputs inverted on XRK32308–2 and XRK32308–3 in bypass mode, S2 = 1 and S1 = 0.

TABLE 3: AVAILABLE XRK32308 CONFIGURATIONS

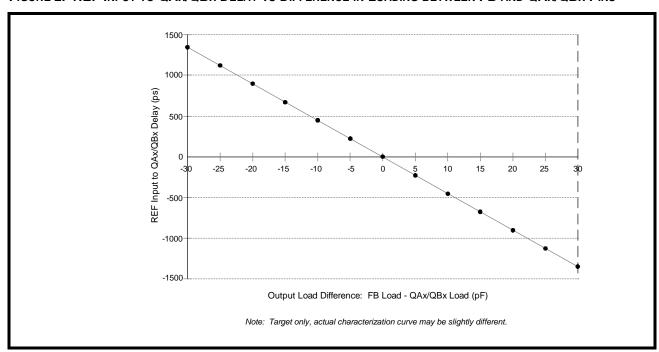

DEVICE	FEEDBACK FROM	BANK A FREQUENCY	BANK B FREQUENCY
XRK32308-1	Bank A or Bank B	Reference	Reference
XRK32308-1H	Bank A or Bank B	Reference	Reference
XRK32308-2	Bank A	Reference	Reference/2
XRK32308-2	Bank B	2 X Reference	Reference
XRK32308-3	Bank A	2 X Reference	Reference or Reference ^[5]
XRK32308-3	Bank B	4 X Reference	2 X Reference
XRK32308-4	Bank A or Bank B	2 X Reference	2 X Reference
XRK32308-5H	Bank A or Bank B	Reference/2	Reference/2

NOTES:

5. Output phase is indeterminant (0° or 180° from input clock). If phase integrity is required, use the XRK32308–2.

ZERO DELAY AND SKEW CONTROL

FIGURE 2. REF INPUT TO QAX/QBX DELAY VS DIFFERENCE IN LOADING BETWEEN FB AND QAX/QBX PINS

To close the feedback loop of the XRK32308, the FB pin can be driven from any of the eight available output pins. The output driving the FB pin will be driving a total load of 7 pF plus any additional load that it drives. The relative loading of this output (with respect to the remaining outputs) can adjust the input-output delay. This is shown in the graph above.

For applications requiring zero input-output delay, all outputs including the one providing feedback should be equally loaded. If input-output delay adjustments are required, use the above graph to calculate loading differences between the feedback output and remaining outputs.

For zero output-output skew, be sure to load outputs equally.

TABLE 4: ABSOLUTE MAXIMUM RATINGS

Supply Voltage to Ground Potential	-0.5V to +7.0V
DC Input Voltage (Except Ref)	-0.5V to V _{DD} +0.5V
DC Input Voltage REF	-0.5 to 7V
Storage Temperature	-65°C to +150°C
Junction Temperature	150°C
Static Discharge Voltage (per MIL-STD-883, Method 3015)	>2000V

TABLE 5: OPERATING CONDITIONS FOR XRK32308 COMMERCIAL TEMPERATURE DEVICES

PARAMETER	DESCRIPTION	Min	MAX	Unit
V_{DD}	Supply Voltage	3.0	3.6	V
T _A	Operating Temperature (Ambient Temperature)	0	70	°C
C _L	Load Capacitance, below 100MHz	-	30	pF
OL.	Load Capacitance, from 100MHz to 120MHz	-	3.6	pF
C _{IN}	Input Capacitance ^[6]	-	7	pF
t _{PU}	Power-up time for all V _{DD} s to reach minimum specified voltage (power ramps must be monotonic)	0.05	50	ms

NOTES:

6. Applies to both Ref Clock and FB.
