

### 2,097,152 WORDS X 72 BIT DYNAMIC RAM MODULE

#### Description

The THM72V2010AG/ATG is a 2,097,152 words by 72 bits dynamic RAM module which assembled 9 pcs of TC51V17800ANJ/ANT on the printed circuit board. This module is optimized for application to the systems which are required high density and large capacity such as main memory of the computers and as image memory systems, and to the others which are requested compact size.

#### Features

- 2,097,152 words by 72 bits organization
- Fast access time and cycle time
- Single power supply of 3.3V±5%
- Low Power
  - 4,095mW MAX. Operating (THMxxxxxx-60)
  - 3,470mW MAX. Operating (THMxxxxxx-70)
  - 50.4mW MAX. Standby
- Read-Modify-Write,  $\overline{\text{CAS}}$  before  $\overline{\text{RAS}}$  refresh,  $\overline{\text{RAS}}$ -only refresh, Hidden refresh, and Fast Page Mode capability
- All inputs and outputs TTL compatible
- 2,048 refresh cycles/32ms
- Package: 168pin Gold Contact
  - THM72V2010AG-x SOJ type
  - THM72V2010ATG-x TSOP type

#### Key Parameters

		-60	-70
$t_{\text{RAC}}$	RAS Access Time	60ns	70ns
$t_{\text{AA}}$	Column Address Access Time	35ns	40ns
$t_{\text{CAC}}$	CAS Access Time	20ns	25ns
$t_{\text{RC}}$	Cycle Time	110ns	130ns
$t_{\text{PC}}$	Fast Page Mode Cycle Time	40ns	45ns

"L": Low Level (buffered)

1. This technical data may be controlled under U.S. Export Administration Regulations and may be subject to the approval of the U.S. Department of Commerce prior to export. Any export or re-export, directly or indirectly, in contravention of the U.S. Export Administration Regulations is strictly prohibited.

2. LIFE SUPPORT POLICY

Toshiba products described in this document are not authorized for use as critical components in life support systems without the written consent of the appropriate officer of Toshiba America, Inc. Life support systems are either systems intended for surgical implant in the body or systems which sustain life.

A critical component in any component of a life support system whose failure to perform may cause a malfunction of the life support system, or may affect its safety or effectiveness.

3. The information in this document has been carefully checked and is believed to be reliable; however no responsibility can be assumed for inaccuracies that may not have been caught. All information in this data book is subject to change without prior notice. Furthermore, Toshiba cannot assume responsibility for the use of any license under the patent rights of Toshiba or any third parties.

Pin Name

B0, A0 ~ 9, A10R	Address Inputs
DQ0 ~ 71	Data Input/Outputs

$t_{RAL}$	Column Address to $\overline{RAS}$ Lead	40	-	45	-	ns	

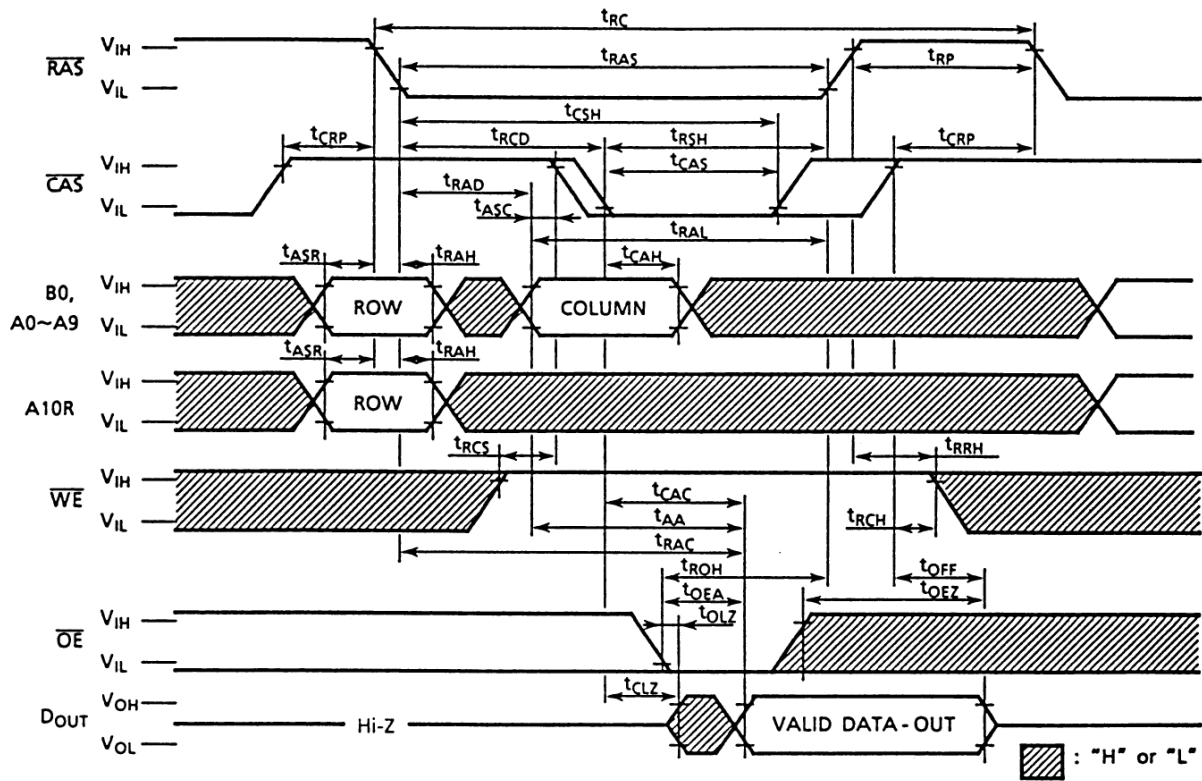

**Notes:**

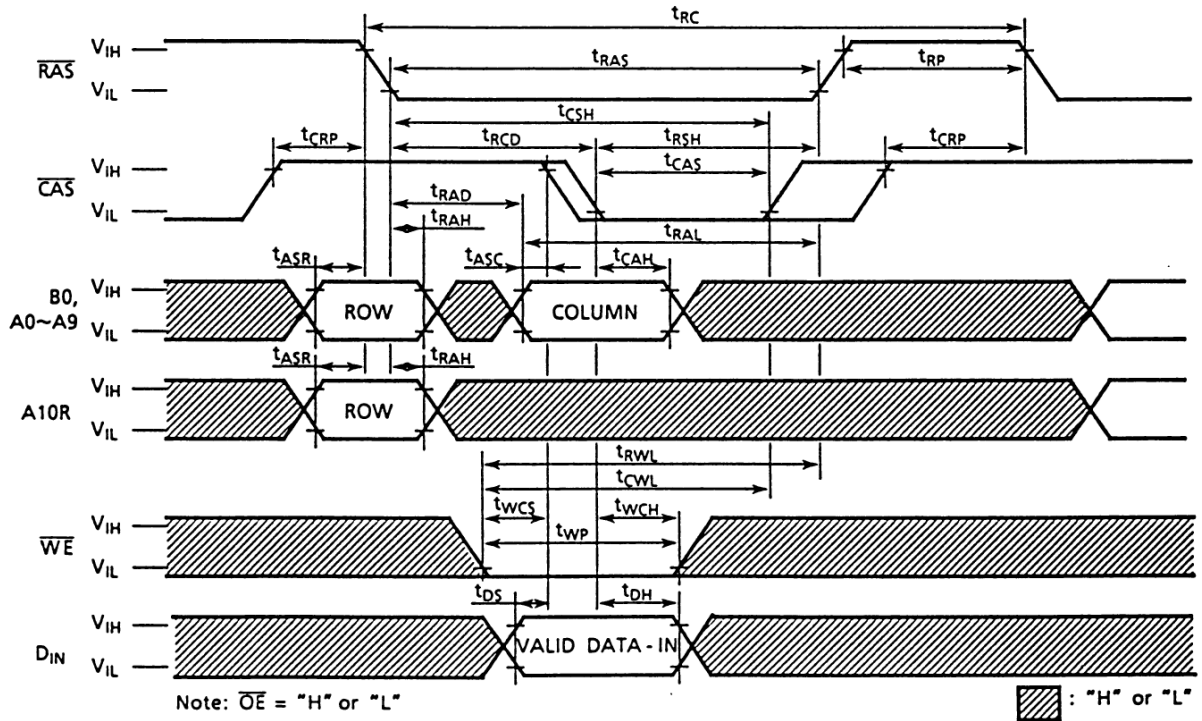

1. Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device.
2. All voltages are referenced to  $V_{SS}$ .
3.  $I_{CC1}$ ,  $I_{CC3}$ ,  $I_{CC4}$ ,  $I_{CC6}$  depend on cycle rate.
4.  $I_{CC1}$ ,  $I_{CC4}$  depend on output loading. Specified values are obtained with the output open.
5. Address can be changed one or less while  $\overline{RAS}=V_{IL}$ . In case of  $I_{CC4}$ , it can be changed once or less during a fast page mode cycle ( $t_{PC}$ ).
6. An initial pause of 500 $\mu$ s is required after power-up followed by 8  $\overline{RAS}$  only refresh cycles before proper device operation is achieved. When the internal refresh counter is used, a minimum of 8  $\overline{CAS}$  before  $\overline{RAS}$  refresh cycles instead of 8  $\overline{RAS}$  only refresh cycles are required.
7. AC measurements assume  $t_T=5$ ns.
8.  $V_{IH}$  (min.) and  $V_{IL}$  (max.) are reference levels for measuring timing of input signals. Also, transition times are measured between  $V_{IH}$  and  $V_{IL}$ .
9. This parameter is measured with a load equivalent to 100pF and at  $V_{OH}=2.0V$  ( $I_{OUT}=-2mA$ ),  $V_{OL}=2.0V$  ( $I_{OUT}=2mA$ ).
10.  $t_{OFF}$  (max.) and  $t_{OEZ}$  (max.) define the time at which the output achieves the open circuit condition and are not referenced to output voltage levels.
11. Either  $t_{RCH}$  or  $t_{RRH}$  must be satisfied for a read cycle.
12. These parameters are referenced to  $\overline{CAS}$  leading edge in early write cycles and to  $\overline{WE}$  leading edge in Read-Modify-Write cycles.
13.  $t_{WCS}$ ,  $t_{RWD}$ ,  $t_{CWD}$ ,  $t_{AWD}$  and  $t_{CPWD}$  are not restrictive operating parameters. They are included in the data sheet as electrical characteristics only. If  $t_{WCS} \geq t_{WCS}$  (min.), the cycle is an early write cycle and the data out pin will remain open circuit (high impedance) through the entire cycle; If  $t_{RWD} \geq t_{RWD}$  (min.),  $t_{CWD} \geq t_{CWD}$  (min.),  $t_{AWD} \geq t_{AWD}$  (min.) and  $t_{CPWD} \geq t_{CPWD}$  (min.) (Fast Page Mode), the cycle is a Read-Modify-Write cycle and the data out will contain data read from the selected cell: If neither of the above sets of conditions are satisfied, the condition of the data out (at access time) is indeterminate.
14. Operation within the  $t_{RCD}$  (max.) limit insures that  $t_{RAC}$  can be met.  $t_{RCD}$  (max.) is specified as a reference point only: If  $t_{RCD}$  is greater than the specified  $t_{RCD}$  (max.) limit, then access time is controlled by  $t_{CAC}$ .
15. Operation within the  $t_{RAD}$  (max.) limit insures that  $t_{RAC}$  (max.) can be met.  $t_{RAD}$  (max.) is specified as a reference point only: If  $t_{RAD}$  is greater than the specified  $t_{RAD}$  (max.) limit, then access time is controlled by  $t_{AA,27}$ .

Read Cycle in the Test Mode

Write Cycle (Early Write) in the Test Mode

**Test Mode**

The TC51V17800ANJ/ANT is the RAM organized as 2,097,152 words by 8 bits, it is internally organized as 1,048,576 words by 16 bits. In "Test Mode", data are written into 16 sectors in parallel by using only I/O1. A9C is not used. If, upon reading, 16 bits are equal (all "1"s or "0"s), the I/O8 pin indicates a "1". If they were not equal, the I/O8 pin would indicate a "0". Other I/O pins (I/O1 ~ 7) always indicate a "1" a during test mode read cycle. Figure 1 shows the block diagram of TC51V17800ANJ/ANT. In "Test Mode", the 2Mx8 DRAM can be tested as if it were a 1Mx16 DRAM.

" $\overline{WE}$ ,  $\overline{CAS}$  Before  $\overline{RAS}$  Refresh Cycle" puts the device into "Test Mode", and " $\overline{CAS}$  Before  $\overline{RAS}$  Refresh Cycle" or " $\overline{RAS}$  Only Refresh Cycle" puts it back into "Normal Mode". In the Test Mode, " $\overline{WE}$ ,  $\overline{CAS}$  Before  $\overline{RAS}$  Refresh Cycle" performs the refresh operation with the internal refresh address counter. The "Test Mode" function reduces test times (1/2 in case of N test pattern).
