

## Dual Low Offset Operational Amplifier

### General Description

- The LM358A/B series consist of two independent, high gain and internally frequency compensated operational amplifiers. They can specifically designed to operate from a single power supply. Operation from split power supply is also possible and the low power supply current drain is independent of the magnitude of the power supply voltages.
- The LM358A/B is available in SOP-8 and DIP-8 packages.

SOP-8

DIP-8

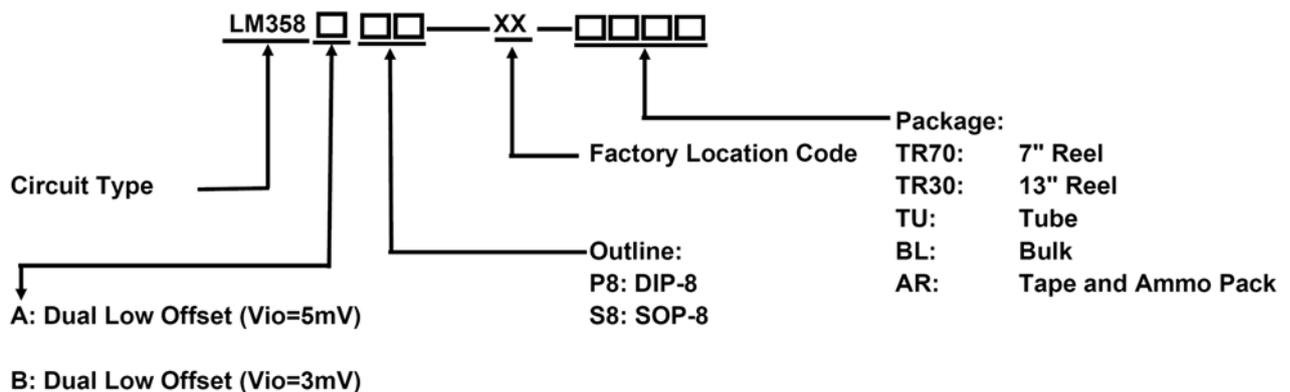

### Features

- Internally frequency compensated for unity gain
- Large DC voltage gain: 100dB Typical
- Wide power supply range:  
Single Supply: 3V to 36 V  
Dual Supplies:  $\pm 1.5V$  to  $\pm 18V$
- Input common-mode voltage range include ground
- RoHS Compliance

### Applications

- Battery Charger
- Cordless Telephone
- Switching Power Supply

### Absolute Maximum Ratings (Note1)

Symbol	Description	LM358A	LM358B	Unit
V <sub>CC</sub>	Power Supply Voltage	±18		V
V <sub>I(DIFF)</sub>	Differential Input Voltage	40		V
V <sub>I</sub>	Input Voltage	-0.3 ~ +40		V
P <sub>D</sub>	Power Dissipation	SOP-8	550	mW
		DIP-8	830	
T <sub>J</sub>	Junction Temperature	150		°C
T <sub>OPR</sub>	Operating Temperature Range	-40 ~ +85		°C
T <sub>STG</sub>	Storage Temperature Range	-65 ~ +150		°C
T <sub>L</sub>	Lead Temperature (Soldering 10s)	260		°C

Note 1: Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability.

Note 2: Limits over the full temperature are guaranteed by design, but not tested in production.

Note 3: The input common-mode voltage of either input signal voltage should not be allowed to go negatively by more than 0.3V (at 25°C). The upper end of the common-mode voltage range is  $V_{CC}-1.5V$  (at 25°C), but either or both inputs can go to +36V without damages, independent of the magnitude of the  $V_{CC}$ .
