

LOW NOISE PREAMPLIFIER COMPRESSOR

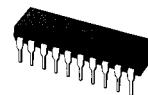

- SINGLE SUPPLY OPERATION (10 to 30V)
- HIGH SUPPLY VOLTAGE REJECTION
- COMPRESSOR FACILITY
- VERY LOW NOISE AND DISTORTION
- HIGH COMMON MODE REJECTION
- SHORT CIRCUIT PROTECTION

DESCRIPTION

The TDA 7232 is a preamplifier mainly intended for car-radio applications, requiring very low noise and distortion performance.

It consists of a unity gain differential input amplifier with a very high common mode rejection, a compressor which avoids the output clipping and three multipurpose operational amplifiers.

A high stability voltage regulator is also included. The TDA 7232 is assembled in a 20 lead dual in line plastic package.

APPLICATION INFORMATION

The devices TDA7232 and TDA7260 realize with four external POWER MOS an exclusive audio system for car radio, thanks to their unique feature as:

- 25 W output power ($d = 0.3\%$) without heatsink, thanks to the extra-high efficiency (85 % typ. at rated output power) of the power stage, which operates in class "D" (pulse width modulation).
- In-car frequency response compensation,

thanks to the availability of several operational amplifiers for the necessary equalization.

- High-quality sound at all listening levels, thanks to an appropriate compressor circuit that avoids clipping in the system.
- Low distortion, low noise, fully protected operation of the whole system.
