

**FEATURES**

- Slew Rate — Up to 120 V/ $\mu$ s
- Settling Time — 200 ns to 0.1%
- Bias Current — 100 nA
- Gain Bandwidth Product — 30 MHz
- Internal Frequency Compensation
- Radiation Hardened
- Meets MIL-STD-883

**GENERAL DESCRIPTION**

The 2500 series of high slew rate operational amplifiers are monolithic integrated circuits fabricated using dielectric isolation and thin film resistors. These internally compensated amplifiers feature excellent input parameters, high gain and wide bandwidth. They are ideally suited for D/A and A/D converter circuits, pulse amplifiers and high frequency buffer amplifiers.

2500 through 2515 are compensated for unity gain. 2520 through 2525 are intended for closed loop gains of 3 or greater, and feature increased slew rates and gain-bandwidth products.
