

LITEMINDER

718 9485 / 718 9497

**Liteminder is an automatic
light switching system offering
immense savings in lighting bills.**

**Liteminder does what we should all do. It switches
lights off automatically when the detection zone is
unoccupied, or when there is sufficient ambient light.**

Benefits

- Reduces electricity usage
- Automatic light switching
- Impressive savings achievable (40%+)
- Rapid payback
- Reduces lamp usage
- Fully automatic control
- Reduces load on air conditioning
- Modular system for large zones
- Dual Relay (Modular System)
- Improves security
- Can help reduce maximum demand charges.

LITEMINDER

The intelligent interior lighting control

Detection Pattern –
Wall mount Version

Despite ever increasing electricity tariffs and environmental responsibilities, few of us are diligent enough to switch off lighting when not required. The Liteminder switches lighting off - automatically. All you will notice is the reduction in your energy bills.

How it works

Utilising highly sensitive passive infra red detection, the Liteminder constantly monitors the detection zone for occupancy - during zero occupancy the Liteminder will automatically switch lighting off - only allowing the lights to come on if the detection zone is occupied and there is insufficient daylight.

Detection Pattern –
Ceiling Mount Version

Savings with Liteminder

Without control, lights are often switched on when the first person arrives and, when they remember, switched off as the last person leaves. The wastage from having lights on when an area is adequately lit by daylight or is unoccupied can be huge. Savings in excess of 40% (often much greater) are made by ensuring lighting is only on when required.

LITEMINDER STANDARD RANGE

The standard Liteminder is a fully featured self contained unit comprising infra-red detector, photocell, and integral switching relay. The front access cover can be slid upwards to enable adjustment of time delay and photocell. (See technical data - over).

Wall Mounted version

For optimum detection this unit is mounted 2.2m high in the corner of the detection zone. Being fully self contained, it is ideal for modular offices, storerooms, washrooms etc. Optional brackets enable further fine tuning of the detection zone. The specially designed lens bezel provides 110° coverage to ensure optimum detection.

Ceiling Mounted Liteminder Solo

Providing a full 360° detection pattern, the ceiling mounted Liteminder Solo can be placed directly above the main activity zone. The outer zone sees large movement across and into the zone, whilst the concentrated inner zone detection ensures lights are held on by small movements. Ideal for open plan offices or any area where the majority of movement is in one specific zone.

LITEMINDER MODULAR – Low Voltage

The modular system comprises a dedicated power supply unit, integral transformer and switching relay as used in the InfraPod II range. The supply can power one master detector with photocell and up to 10 slave detectors, all low voltage. Detection patterns are as per the Standard Liteminder. Ideal for areas where multiple detection is required, e.g. long corridors, irregular shaped offices, rooms with lobbies etc.

Dual Relay Option

The Modular Liteminder system can have single or dual relay, each with independently set on and off light levels.

Specification

Motion Sensor	:	Passive infra-red detector
Supply Voltage	:	240v 50Hz + BEMS variations
Modular Power Supply	:	240v 50Hz + BEMS variations
Modular Detector	:	12 Volt DC
Switching Capacity- Standard	:	8 amps inductive or resistive
- Modular	:	8 amps inductive or resistive
Light Sensor	:	Adjustable 50 - 1500 lux
Timer	:	Adjustable 4 - 32 minutes
		Wall Unit Ceiling Unit
Field of view	:	110° 360°
Area Coverage	:	1560sq ft Depends on ceiling height
Detection range	:	12mtr 3.5mtr radius (2.75mtr ceiling)
Colour - detector	:	White
- modular control	:	White

All dimensions shown are overall and approximate.

Liteminder is one of a range of controls, please contact Setsquare for details.

A range of Setsquare lighting controls has been evaluated by The Buying Agency, an Executive Agency of the Department of the Environment, and has been approved for supply to the public sector.

SEG 82/3
Contract No: A211727/A

All Setsquare products are designed, manufactured, supplied and installed to BS EN ISO 9001; 1994.
