Murata
Manufacturing Co., Ltd.

www.DataSheet4U.com

Cat.No.C31E-5

MURATA entered the suppression filter field at an early stage in response to serious problems stemming from electromagnetic interference between electronic equipment. These pioneering efforts in the filter field resulted in the development and world-wide marketing of the EMI Suppression Filter (EMIFIL®).

In 1979, MURATA successfully developed an on-board type EMIFIL®, thereby realizing a solution to PC board noise suppression.

In 1985, the EMIFIL® class of on-board filters were further developed to produce a chip-based EMI suppression filter, thus substantially improving noise suppression in compact electronic equipment.

Based on more than thirty years of ceramic dielectric and ferrite technology experience, MURATA's full range of high-performance EMIFIL® serve to overcome and control all types of electronic-equipment noise problems. Further, MURATA's various noise suppression circuits, designed for the diversified needs of the electronic industry, offer great advantages in the pursuit of noise-free equipment, etc.

Currently, MURATA is completing a system for the analysis and solution of noise problems. For the finest in noise suppression components, boards, and related equipment contact the nearest MURATA sales office.

■ABOUT OPERATING CONDITION

Noise suppression levels resulting from MURATA's EMI suppression filters (EMIFIL®) may vary, depending on the circuits and ICs used, type of noise, mounting pattern, lead wire length, mounting location, and other operating conditions. Be sure to check and confirm, in advance, the noise suppression effect of each filter, in actual circuit, etc., before applying the filter in a commercial-purpose equipment design.

EMIFIL® for both DC and AC power supplies, and thru-type EMI suppression filters for high-frequency equipment (thru-type EMIFIL®) are available. For details, contact the nearest MURATA sales office.

Selection Guide of CHIP EMIFIL®

Impedance is typical value at 100MHz

Typical Application of EMI Suppression Filter (EMIFIL®) for DC line

The main applications of EMIFIL® for DC lines are as follows: Descriptions of these applications are based on standard digital PC board.

Typical applications of EMIFIL® in PC boards can be divided into four types:

1. Elimination of non desirable harmonics in high speed signal lines

High speed clock signals, for example, contain higher level harmonic components, which can cause noise. These higher harmonics are reduced to within acceptable range by EMIFIL®.

For relatively low noise levels, chip ferrite bead inductors and chip solid EMIFIL® (3-terminal capacitors) are used; for high level noise applications, signal line EMIFIL® are used.

2. Elimination of noise in DC power supplies

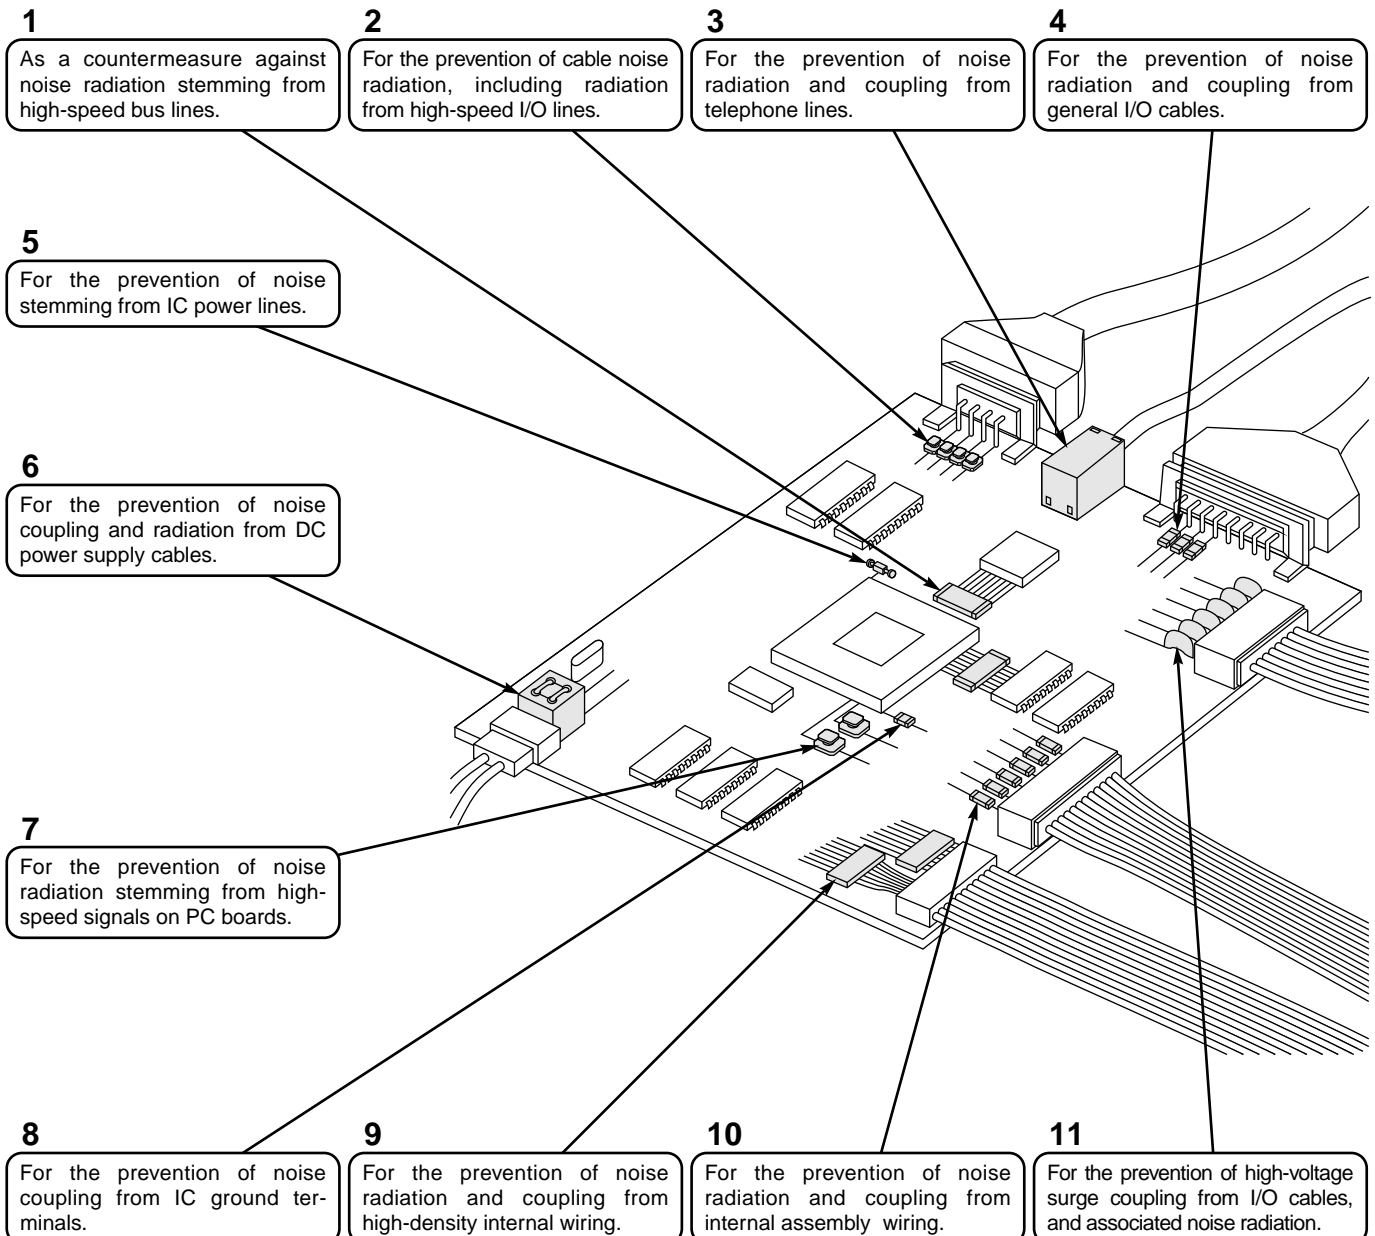

DC power supplies utilize high frequency current in converting AC power to DC power, etc., and these currents may cause noise. Since DC power supplies are designed to supply only DC current, the current flow is larger than that on the signal lines, which can cause DC resistance. Therefore, in such situations, EMIFIL® having a wider noise suppression band and larger current capacity are used. For relatively low noise suppression, chip ferrite bead inductors and chip solid EMIFIL® (3-terminal capacitors) are used; block-type, DC power supply EMIFIL® are used to suppress higher level noise.

3. Noise suppression in I/O cables

Some I/O cables, when connected to PC boards, act as an excellent antenna, which can radiate noise and induce noise through coupling. To prevent this, EMIFIL® are used at the connection point between the I/O cable and PC board to prevent noise from being introduced into the board. For relatively low level noise suppression, chip ferrite bead inductors are used; for high noise suppression, chip solid EMIFIL® (3-terminal capacitors) are used. At high speed signal line connection points, signal line EMIFIL® are used.

4. High voltage surge countermeasures

EMIGUARD® filters, which also have a surge absorbing function (using a varistor), are effective in preventing both higher harmonic noise and high voltage surges (such as electrostatic discharges) from interfering with PC board operation.

Typical Application of EMI Suppression Filter (EMIFIL®) for DC line

		EMI Countermeasure	Suitable EMIFIL®Page

Outlines of EMI Suppression Filter (EMIFIL®) for DC line

Chip Ferrite Bead/Ferrite Bead Inductor

Chip Ferrite BeadP.13-39

Ferrite Bead InductorP.78-79

- Inductor type EMI suppression filters are effective for frequencies ranging from a few MHz to a few GHz. Inductor type filters are small, lightweight, and widely used as a low noise countermeasure, as well as a universal noise suppression component.
- The inductor type EMIFIL® produce a micro inductance in the low frequency range. At high frequencies, however, the resistive component of the inductor produces the primary impedance. When inserted in series in the noise producing circuit, the resistive impedance of the inductor prevents noise propagation.

Equivalent Circuit

■ IMPEDANCE-FREQUENCY CHARACTERISTICS (TYPICAL)

R : Real Part (Resistive Portion) X : Imaginary Part (Inductive Portion)

Chip Solid EMIFIL® /T-Type Chip EMIFIL® /Disk Type EMIFIL®

Chip Solid EMIFIL®P.40-44

T-type Chip EMIFIL®P.56-57

Disk Type EMIFIL®P.80-85

- This capacitor type EMI suppression filter has a large noise suppression effect at frequencies ranging from a few MHz to hundreds of MHz. This type of filter is used widely as a universal, high performance EMI suppression component.
- The chip solid EMIFIL® incorporates a built-in three-terminal capacitor, eliminating the lead wire and thereby increasing the high-frequency performance characteristic.
- The T-type chip EMIFIL® is a chip EMI suppression filter with a built-in feed-thru capacitor. The use of ferrite beads on input and output terminals minimizes resonance with surrounding circuits.
- Whatever the situation, 3-terminal construction reduces residual inductance, thereby substantially improving noise suppression at frequencies over 10MHz.

■ COMPARISON OF INSERTION LOSS CHARACTERISTICS

A 3-terminal capacitor has a high self resonance frequency than general 2-terminal type and exhibits effective noise suppression at high frequency

Outlines of EMI Suppression Filter (EMIFIL®) for DC line

EMIFIL® for Signal Line

Chip EMIFIL® for Signal Line..... P.13-32, P.51-53

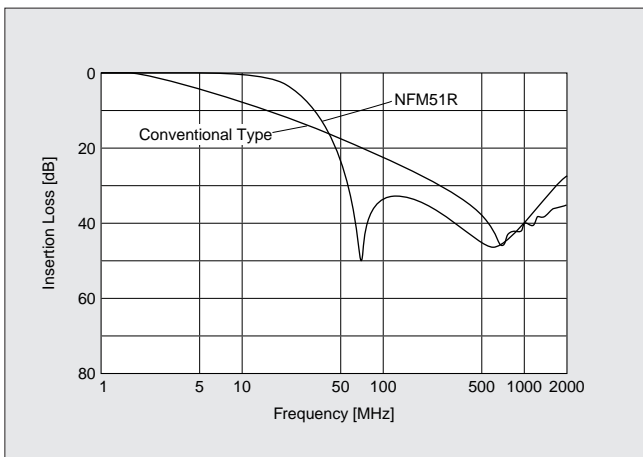

Chip EMIFIL® with Waveform Distortion Suppressing Function.....P.45-50

- High-speed signal application EMIFIL® are high performance EMI suppression filters which increase the slope of insertion loss frequency characteristic curves (shape factor), thereby improving noise and signal separation. These are used for high speed signal applications in which noise and signal frequency approach the same value.
To avoid the elimination of both the noise and specific signal components, 3-terminal capacitors and other components are applied.
An NFM51R with a built-in capacitor and an inductor type BLM□□B are available.
BLM11HB has additional performance for suppressing GHz range noise after cut off frequency.
- The EMIFIL® with waveform distortion suppressing function suppresses waveform distortion caused by the resonance of digital ICs and surrounding circuits.

■ COMPARISON OF INSERTION LOSS CHARACTERISTICS

● Waveform change when filter is inserted

● Conventional Type

● EMIFIL® for Signal Line NFM51R series

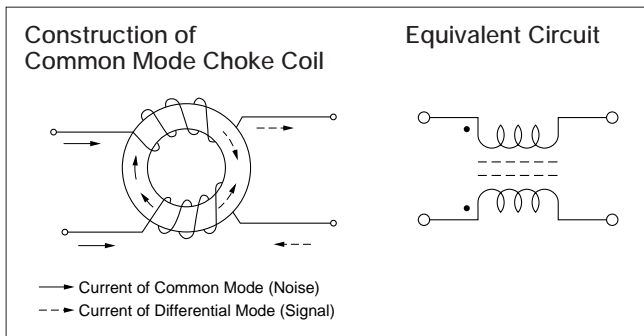

Common Mode Choke Coil

Chip Common Mode Choke Coil.....P.60-67

Common Mode Choke CoilP.101-102

- These choke coils reduce common mode noise, which causes problems on balanced transmission lines, and are effective against common mode noise in the several MHz to several 100 MHz frequency range.
They are ideally suited for use on DC power supply lines and interface cables.
- There are two types of chip common mode choke coils: the high-performance wound wire PLM250. They offer particular characteristics to match the specific application.

■ IMPEDANCE-FREQUENCY CHARACTERISTICS (PLW3216S)

Outlines of EMI Suppression Filter (EMIFIL®) for DC line

Chip Varistor

Chip VaristorP.68-69

- Chip varistor is surge absorbing components by inserting surge entrance line and ground line. ESD (Electro Static Discharge) breaks IC inside of equipment. Chip varistor suppress surge voltage and results to protect circuits.
- Chip varistor has twice IC protection performance as zener diode or diode.

■ SURGE PROTECTION PERFORMANCE

Surge Test Circuit

EMIGUARD®

Chip Solid EMIGUARD®P.58-59

VFM41R

EMIGUARD®P.86-92

VFR303

DSS706

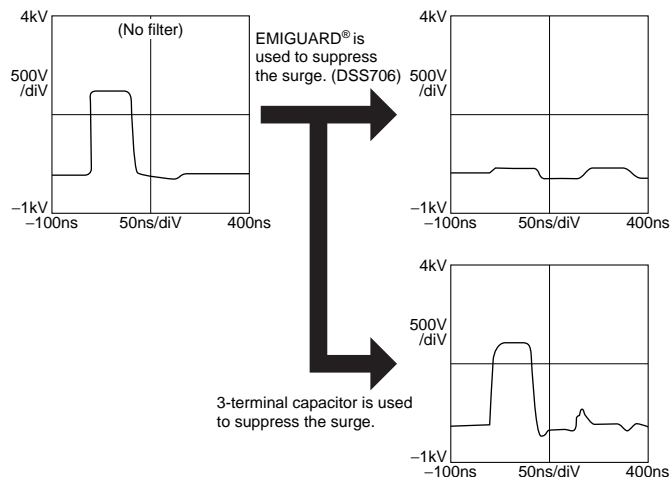

DSS710

- EMIGUARD® eliminates both surge noises and EMI noises due to its dielectric varistor material.
- Effective when high frequency noise and high voltage surge suppression are required, and also in situations when surging starts at extremely high speeds. This type of surging cannot be eliminated with general type varistors.
- VFM41R is chip type of EMIGUARD®.

Construction of EMIGUARD® (DSS710)

■ SURGE ABSORPTION EFFECT OF EMIGUARD®

Block Type EMIFIL®

Block Type EMIFIL®P.97-100

BNP

BNX

- Block type EMIFIL® are resin encased, built-in, high performance EMI suppression filters, which use a feed-thru capacitor having excellent high frequency characteristics.
- Used when the noise frequency is high, or when extreme countermeasures are required.
- The BNP filter series features high performance filters, which are used to suppress noise with frequencies greater than several megahertz in signal circuits. With a current capacity of up to 10A, however, this filter can also be used in DC power circuits (available with 2 or 3 circuits per block).
- The high performance EMIFIL® BNX series exhibits significant noise suppression effects over a wide frequency band (extending from 100kHz to 1GHz) in DC power lines.

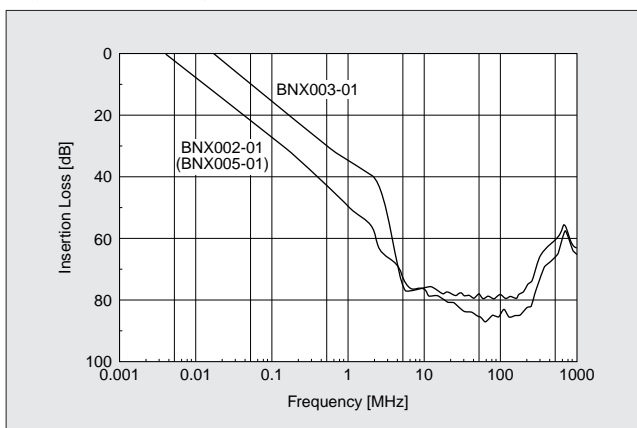

Equivalent Circuit (BNP Series)

Equivalent Circuit (BNX Series)

■ INSERTION LOSS CHARACTERISTICS (BNX SERIES)

CHIP EMIFIL®

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

Chip Ferrite Bead **BLM** Series

Essential for Noise Suppression in High Speed Signal Lines and DC Power Lines

The chip ferrite bead BLM series comprises ferrite bead inductors in the shape of a chip. This inductor generates a high impedance which at high frequencies mainly consists of a resistance element. The BLM series is effective in circuits without stable ground lines because the BLM series does not need a connection to ground.

Chip sizes of 1.0×0.5, 1.6×0.8, 2.0×1.25, 3.2×1.6 and 4.5×1.6mm are cataloged. (The BLA series of array type chip ferrite bead is also cataloged.)

The nickel barrier structure of the external electrodes provides excellent solder heat resistance. Both flow and reflow soldering methods can be employed.

■FEATURES

The BLM series comprises, the R series (for digital interface), the A series (for standard), the B series (for high speed signal), and the P series (for large current).

1. BLM□□R series-For Digital Interface

The BLM-R series can be used in Digital Interface. Resistance of BLM-R series especially grows in the lower frequency range. Therefore BLM-R series is less effect for digital signal waveform at low frequency range and can suppress the ringing.

2. BLM□□A series-For Standard

The BLM-A series generates an impedance from the relatively low frequencies. Therefore the BLM-A series is effective in noise suppression in the wide frequency range (30MHz-Several hundred MHz).

3. BLM□□B series-For High Speed Signal

The BLM-B series can minimize attenuation of the signal waveform due to its sharp impedance characteristics. Various impedances are available to match signal frequency

4. BLM□□P series-For Large Current

The BLM-P series can be used in high current circuits due to its low DC resistance. It can match power lines to a maximum of 6A DC (BLM41P).

■PART NUMBERING

■DIMENSIONS

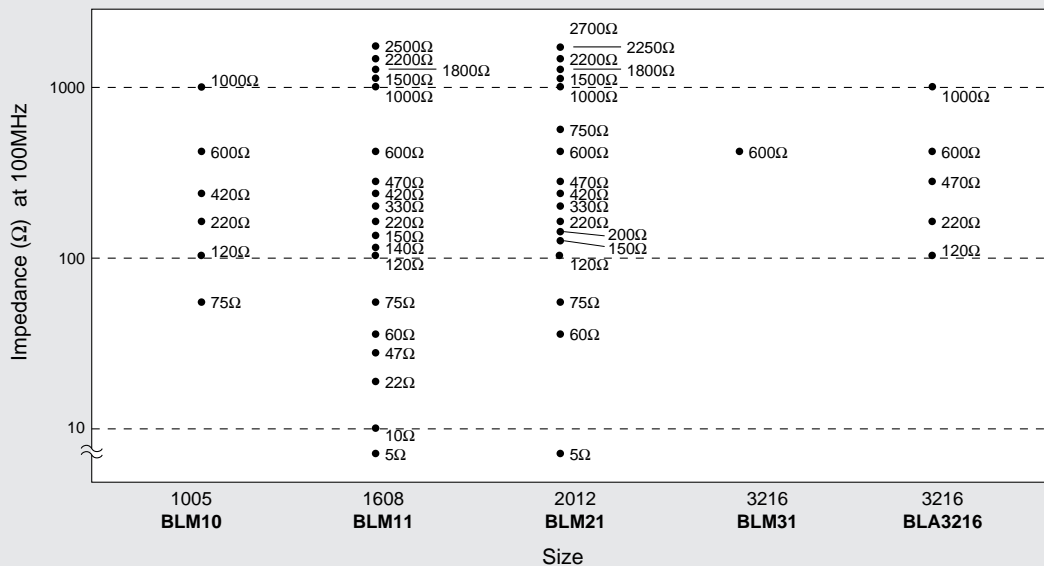

SELECTION GUIDE

●BLM□□A series-Standard · BLM□□R series-For Digital Interface · BLM□□P series-For Large Current

●BLM□□B series-For High Speed Signal

DIFFERENCE BETWEEN A SERIES, B SERIES AND R SERIES

The BLM□□B series has sharp impedance characteristics and it does not affect the signal frequency. The BLM□□R series has resistance especially growing in the lower frequency range. Therefore it can suppress the ringing effectively.

DERATING

When the BLM□□P series is for Large-current used in operating temperatures exceeding + 85°C, derating of current is necessary. Please apply the derating curve shown below according to the operating temperature.

■ WAVEFORM DISTORTION SUPPRESSING PERFORMANCE OF BLM□□R SERIES

Initial (no filter)

● Signal waveform
(100nsec/Div, 2V/Div)

(10nsec/Div, 2V/Div)

● Spectrum

Ringing is caused on the signal waveform
Such ringing contains several hundred MHz harmonic components and generates noise.

Resistor (47Ω) is used

● Signal waveform
(100nsec/Div, 2V/Div)

(10nsec/Div, 2V/Div)

● Spectrum

Comparing initial waveform, ringing is suppressed a little.
However there still remains high level waveform distortion.

BLM11R221SK (220Ω at 100MHz) is used

● Signal waveform
(100nsec/Div, 2V/Div)

(10nsec/Div, 2V/Div)

● Spectrum

BLM11R has excellent performance for noise suppression and waveform distortion suppression.
BLM11R suppresses drastically not only spectrum level in more than 100MHz range but waveform distortion.

*1 has sharp impedance characteristic suitable for high speed lines. (At Maximum Signal Frequency insertion loss is 6dB in 50Ω impedance circuit.)
 *2 marked items are designed for ultra-high speed signal lines such as next generation memory interface. Since these impedance curve rise from several hundred MHz, these items can suppress noise unless the misoperation of circuits. (At Maximum Signal Frequency, impedance is 22Ω which is used as Dumping.)

Chip Ferrite Bead Array **BLA3216** Series

4 Components are Included in 3.2×1.6mm Chip

The miniaturize of electronic equipment requires high performance EMI filters which enables high density mounting. BLA3216 series consists of 4 circuit of ferrite bead inductor. BLA3216 is suitable for EMI suppression in smaller digital equipment.

■FEATURES

1. BLA3216 have 4 circuits in 3.2×1.6mm body with 0.8mm pitch.
2. Provides attenuation across a broad frequency range. Two types of impedance are available which meets general signal line and high speed signal line.
3. Original inner electrode structure enables extra low crosstalk.
4. The nickel barrier structure of the external electrodes provides excellent solder heat resistance. Both flow and reflow soldering methods can be employed.

■APPLICATIONS

- Notebook size PC, PDA and other compact size digital equipment

CHIP EMIFIL®

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

Chip Solid EMIFIL® NFM2012R/40R/3212R/41R/4516R Series

The chip solid EMIFIL® NFM2012R*/40R/3212R*/41R/4516R* series is a chip type 3-terminal EMI suppression filter. It can reduce residual inductance to an extremely low level making it excellent for noise suppression at high frequencies.

An electrostatic capacitance range of 22pF to 22000pF enables suppression of noise at specific frequencies. (The array type NFA series is also available.)

*Using base metal to the electrode.

FEATURES

1. Small and low profile of 2.0mm×1.25mm×0.5mm (NFM2012R) enables high density mounting.
2. The 3 terminal structure enables high performance in high frequency range.
3. Use original electrode structure which realize excellent solderability.

APPLICATIONS

- PCs and peripherals which emit high amount of noise
- Compact size equipment such as PDA, PC card and mobile telecommunication equipments
- Severe EMI suppression and high impedance circuits such as digital circuits

CHIP EMIFIL®

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

Chip EMIFIL® Array NFA81R/62R/NFA3216D Series

4 Lines 3-Terminal Capacitor are Included in 3.2×1.6mm* Chip Reducing Mounting Space

The NFA series of chip EMI suppression filters is designed for surface mount applications. 4, 6, or 8 circuits are condensed into one package to enable significant savings in mounting space. The filters feature Murata's original EMI suppression technology as well as an improved design base over the single circuit type NFM series. The series is well suited for EMI suppression in digital I/O lines of varied electronic equipment such as Notebook PCs.

*NFA3216D

FEATURES

1. 4, 6, or 8 circuits are available in single packages with either 0.8mm (NFA62R/NFA3216D) or 1.27mm (NFA81R) pitch, making the series excellent for the high density EMI suppression requirement.
2. The 3-terminal structure realizes excellent EMI suppression at high frequencies. The series has a unique internal structure that minimizes crosstalk.
3. The filter has two ground terminals to provide perfect ground conditions for all filter circuits. In this way, excellent EMI suppression in a narrow path can be realized using uncomplicated land designs.
4. The nickel barrier structure of the external electrodes provides excellent solder heat resistance. Both flow and reflow soldering techniques are possible.
5. The series is available in a wide variety of capacitances to meet many of your noise suppression requirements.

APPLICATIONS

- Computers and peripherals, digital TVs, digital VCRs etc.

CHIP EMIFIL®

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

Chip EMIFIL® Array **NFA3216G** Series

4 lines high performance filter with low distortion are included in 3.2 × 1.6mm size

The NFA3216G series is high performance EMI suppression filter array which designed 4 circuits noise filter in 3.2×1.6 mm size. NFA3216G realizes high density mounting.

FEATURES

1. NFA3216G has 4 circuits noise filter in 3.2×1.6 mm size with 0.8mm pitch. High density mounting is available.
2. 3 terminal structure is achieved excellent high frequency performance.
3. Distributed constant circuit realizes smooth change of impedance which prevents reflection of signal and distortion of wave shape.
4. NFA3216G series is effective in the line where ground is not stable, because the resistance element in the filter absorb noise and return it to ground line.

APPLICATIONS

- Suppression of noise in LCD driver or bus line of compact size digital equipment (Such as note book size PC, PDA and other)

■ INSERTION LOSS CHARACTERISTICS (TYPICAL)

● For High Impedance Line (Measured with 50Ω-3kΩ lines)

● For Low Impedance Line (Measured with 50Ω-150Ω lines)

■ INSERTION LOSS MEASURING CIRCUITS

■EFFECT OF NOISE SUPPRESSION BY NFM839R

The NFM839R is effective even if ground line is not stable enough due to its distribute constant circuit structure.

■TESTING CIRCUIT

With Stable Ground Line

● Noise Level without Filter

Standard Type Chip EMIFIL® (100pF)

The standard type chip EMIFIL® is effective on stable ground line.

● Filter Mounting Condition

NFM839R02C470R101

The NFM839R has some advantage to standard type EMIFIL® on stable ground line.

With Poor Ground Line

● Noise Level without Filter

Standard Type ChipEMIFIL® (100pF)

The standard type EMIFIL® lose efficiency on poor ground line.

● Filter Mounting Condition

NFM839R02C470R101

The NFM839R is effective even on poor ground line because of its distribute constant circuit structure and unique system to limit rush current.

■ WAVEFORM DISTORTION SUPPRESSING FUNCTION BY NFM839R

● Testing Circuit

Initial Waveform (no filter)

● Voltage Waveform

Resonance between the internal capacitance of the IC and the inductance of the print pattern causes waveform overshooting and undershooting.

● Current Waveform

When Ordinary Capacitor Filter is Used

● Output Voltage Waveform

Ordinary capacitor filters have no waveform distortion suppressing capability, and they cannot suppress disturbances in the waveforms.

● Input Current Waveform

The current needed to charge and discharge the capacitor raises the peak level of current that flows out of the driver side IC, increasing the load on the IC.

NFM839R

● Output Voltage Waveform

The waveform distortion suppressing function of the NFM839R minimizes disturbances of waveforms.

● Input Current Waveform

The NFM839R also includes a current limiting function, reducing the load on driver ICs.

CHIP EMIFIL®

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

Chip EMIFIL® for Signal Line **NFM51R** Series

100dB/dec. (typ.) Damping Characteristics for High Speed Signal Line

The signal line chip EMIFL® NFM51R series consist of high performance EMI suppression filters.

They are designed for noise suppression in high speed digital circuits in which the signal harmonics are prone to becoming noise sources.

These filters achieve a 100dB/dec. (typ.) damping characteristic made possible by Murata's innovative circuit design. This makes these chips effective in applications where the signal and noise frequencies are close to each other.

■FEATURES

1. The filters suppress signal noise with little or no attenuation of the signal itself.
2. Murata's original internal structure design enables excellent noise suppression up to high frequencies (40dB at 1GHz typ.).
3. The NFM51R series is available in six different values of cutoff frequency ranging from 10MHz up to 500MHz.

■APPLICATIONS

- Suppression of high magnitude radiated noise generated by high speed digital circuits such as clock and RGB circuits
- Suppression of noise in high speed processing circuits such as digital image signal processing circuits

■DIMENSIONS

■ INSERTION LOSS CHARACTERISTICS (TYPICAL)

■ INSERTION LOSS MEASURING CIRCUIT

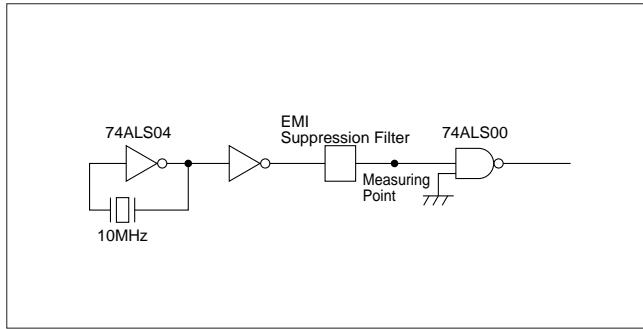

- Comparison with Conventional Chip EMIFIL®
NFM51R series can realize EMI suppression without reducing effective elements of the signal, because it has steep attenuation characteristics.

2

EXAMPLE OF EMI SUPPRESSION IN AN ACTUAL CIRCUIT

● Measuring Circuit

● Signal Waveform and Noise Spectrum before Filter Mounting

● Waveform Change and Noise Suppression Effect when Filter is Inserted

Type of Filter	Signal Wave Form (20ns · 1V/div)	EMI Suppression Effect	Description
NFM51R Series (Cut-off frequency 50MHz)			The NFM51R's steep attenuation characteristic means excellent EMI suppression without waveform cornering.
Conventional Chip Solid type EMI Filter (NFM41R 470pF)			3-terminal capacitors suppress signal frequencies as EMI frequencies so the signal waveform is distorted.
Filter Combined with Conventional LCs	 L : Chip Inductor C : Chip Capacitor (270pF)		Combinations of inductors and capacitors can yield a steep attenuation characteristic, but they require a great deal more mounting space. Moreover, at high frequencies the EMI suppression is less than that obtained by the NFM51R.

2

CHIP EMIFIL®

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

Chip Solid EMIFIL® NFM2012P/40P/4516P/46P

Large Rated Current 3 Terminal Capacitor in DC Power Line

Chip solid EMIFIL® NFM2012P*/40P/4516P*/46P are 3 terminal structure SMT components. These components are able to be applied to large current DC power lines. NFM2012P/40P/4516P/46P are suitable in noise suppression DC lines where relatively large currents operate.

*Using base metal to the electrode.

FEATURES

- **NFM2012P**
 1. The rated current of 2A-4A is suitable for IC's individual power line.
 2. Small dimension enables higher density packaging. NFM2012P is much smaller size. (2.0×1.25×0.85mm)
 3. Murata's original internal electrode structure design which realizes excellent EMI suppression effect from low frequency to high frequency.
- **NFM40P/4516P/46P**
 1. Large rated current (NFM40P/4516P : 2A, NFM46P : 6A) and low voltage drop due to a small DC resistance are suitable for the application in DC power line.
 2. High electrostatic capacitance and remarkable high frequency performance are effective for the immunity against the surge noise and the pulse noise.
 3. Only reflow soldering should be applied.(NFM46P)

APPLICATIONS

- Personal computers, Word processors and Peripherals
- Telephones, PPCs, Communication equipments, etc.
- Digital TVs, VCRs
- Telecommunication equipment

T-type Chip EMIFIL® NFM60R/61R/61RH Series

Meets High Current of 6A T-Type Circuit Chip EMIFIL® with Ferrite Beads

■FEATURES

1. Its large rated current and low voltage drop due to small DC resistance are suitable for DC power line use.
2. The feedthrough capacitor realized excellent high-frequency characteristics.
3. The structure incorporates built-in ferrite beads which minimize resonance with surrounding circuits.
4. For rugged operating environments such as automobile circuitry, Murata offers the heavy duty NFM61RH series. These filters have an extended operating temperature range of -55°C to +125°C.

Chip Solid EMIGUARD® VFM41R Series

3-Terminal Varistor-Capacitor EMI Filter

The VFM41R series is a chip EMIFIL® with varistor function. Its 3-terminal structure provides high performance by suppressing high-frequency noise and absorbing surge noise.

FEATURES

1. The VFM41R series protect semiconductor unit from surge noise such as electrostatic discharge.
2. The VFM41R series suppress EMI noise in signal lines.
3. Chip shape enables high density mounting.

APPLICATIONS

- ESD surge protection and EMI suppression in various electric equipments such as car electronic equipments, portable electronic equipments, telecommunication terminals, office automation equipments, home automation equipments or factory automation equipments

CHIP EMIFIL®

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

Thin Film Type Chip Common Mode Choke Coil **PLP3216S** Series

Thin Film Type Chip Common Mode Chock Coil with High Impedance at High Frequency in Small Size Suitable for USB

The PLP3216S series is chip common mode choke coil that is realized high impedance in small size with ferrite material technology and thin film processing. The PLP3216S has excellent performance at high frequency range. PLP3216S is suitable for differential signal line application.

FEATURES

1. PLP3216S is common mode choke coil that realized small size, low profile, SMD. 3.2×1.6×1.15mm (tolerance:0.15mm)
2. PLP3216S has high common mode impedance (550Ω typ. at 100MHz) in small size.
3. PLP3216S suppress high frequency noise that was unable to be suppressed with existing common mode choke coils.
Suitable for differential signal line as like USB and LVDS, because PLP3216S does not provide distortion to high speed signal transmission due to its high coupling (Coupling coefficient:0.98 min.)

APPLICATIONS

- Common mode noise suppression of signal lines in high speed and high density digital equipment such as personal computers and peripherals.

Multilayer Type Chip Common Mode Choke Coil **PLM3216K**

For Common Mode Noise Suppression in High Speed Signal Lines SMD, Ultra Small Size Common Mode Choke Coil

The PLM3216K series is effective in high frequency noise suppression and suitable for suppression of radiation noise in signal cables. The common mode choke coil structure enables noise suppression without damaging the signal. Murata's original material technology and monolithic technology enable a compact size of 3.2×1.6×1.15mm.

FEATURES

1. The PLM3216K series is effective for common mode noise suppression in digital equipment which causes radiation from cables.
2. Low leakage flux due to monolithic structure enables high density mounting.
3. The nickel barrier structure of the external electrodes provides excellent solder heat resistance.

APPLICATIONS

- Prevention of common mode noise on signal line in personal computers, computer built in equipments, facsimiles, digital telephones, etc.

Wire Wound Type Chip Common Mode Choke Coil **PLW3216S** Series

Wire Wound Type Chip Common Mode Choke Coil with High Impedance and High Coupling Suitable for IEEE1394 and LVDS

■FEATURES

1. PLW3216S realizes small size and low profile.
3.2mm×1.6mm×1.9mm.
2. High common mode impedance at high frequency effects excellent noise suppression performance.
3. Various common mode impedance items of 90 to 2200Ω can be used, considering noise level and signal frequency.
4. Suitable for differential signal line like IEEE1394 and LVDS, because PLW3216S dose not provide distortion to high speed signal transmission due to its high coupling.
5. PLW3216S is lead free design.
6. Small dimension enables higher density packaging.

CHIP EMIFIL®

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

Chip Common Mode Choke Coil **PLM250H/250S** Series

Wire Wound Chip Type with High Impedance, Large Current, High Coupling Are Condensed into Small Chip

■FEATURES

1. High impedance (maximum of 4kΩ at 100MHz : PLM250H10) enables great noise suppression.
2. Large rated current (maximum of 2A) enables power line use.
3. The PLM250 series dose not damage high speed signal due to high coupling common mode choke coil structure.
4. Automatic mounting can be applied.
5. The PLM250 series is specially adapted for reflow soldering.

■APPLICATIONS

- Common mode noise suppression of signal lines in high speed digital equipment such as HDTVs, computers and peripherals
- Common mode noise suppression of DC power lines in AC adapter of notebook size computers, game machines and digital audio equipments

CHIP VARISTOR

Chip Varistor VCM11R/21R Series

Ultra Small Size Surge Absorb Components

The surge test on electronic equipment tends to be popular because of the regulation for immunity. This situation require surge absorb components smaller dimension, lower cost and higher performance. VCM11R/21R are designed as absorbing devices which, with MURATA's advanced technic, has higher performance in spite of its small dimension.

VCM11R/21R absorbs surge voltage, results to protect circuit simply by inserting between surge entrance line and ground line.

FEATURES

1. It is effective in high density packaging, because of smaller dimension than diode which is generally used as surge countermeasure devices.
2. The small clamping voltage ratio enables effective absorption of surge noise.
3. VCM11R can be applied in high speed signal line, because its capacitance is relatively small.
4. The large peak current of VCM21R, up to 150A, enables high reliability against surge.
5. VCM21R can be applied to ISO-7637-1. Test pulse condition.
6. The nickel barrier structure of the external electrodes provides excellent solder heat resistance. Both flow and reflow soldering methods can be applied.

APPLICATIONS

- Surge absorption in communication ports such as RS-232C
- Motor/relay noise absorption
- Electro static protection in I/O port of computers

2

Notice of Chip EMIFIL®/Chip Varistor

CAUTION

1. Rated Current/Rated Voltage/Operating Temperature

- Don't use products beyond the rated current, the rated voltage and the operating temperature range, or, a fire may result due to the deterioration of the insulation resistance, excessive heat, etc.

2. Mounting Density

- Give special attention when mounting products close to other product that radiate heat. The excessive heat by other products may cause deterioration of insulation resistance and excessive heat at this product, resulting in the fire.

NOTICE

1. Standard Land Pattern Dimensions

The capacitor type chip EMI suppression filters (NFM/NFA series) suppress noise by conducting the high-frequency noise element to ground. Therefore, to obtain maximum performance from these filters, the ground pattern should be made as large as possible during the PCB design stage. As shown below, one side of the PCB is used for chip mounting, and the other side is used for grounding. Small diameter feedthrough holes are then used to connect the grounds on each side of the PCB. This reduces the high-frequency impedance of the grounding and maximizes the filter's performance.

Notice of Chip EMIFIL®/Chip Varistor

2. Solder Paste Printing and Adhesive Application

When reflow soldering the chip EMI suppression filter./Chip varistor, the printing must be conducted in accordance with the following cream solder printing conditions.

If too much solder is applied, the chip will prone to be damaged by mechanical and thermal stress from the PCB and may crack.

In contrast, if too little solder is applied, there is the potential that the termination strength will be insufficient, creating the potential for detachment.

Standard land dimensions should be used for resist and copper foil patterns.

When flow soldering the EMI suppression filter/Chip Varistor, apply the adhesive in accordance with the following conditions.

If too much adhesive is applied, then it may overflow into the land or termination areas and yield poor solderability.

In contrast, if insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, then the chip may become detached during flow soldering.

(in mm)

Notice of Chip EMIFIL®/Chip Varistor

3. Standard Soldering Conditions

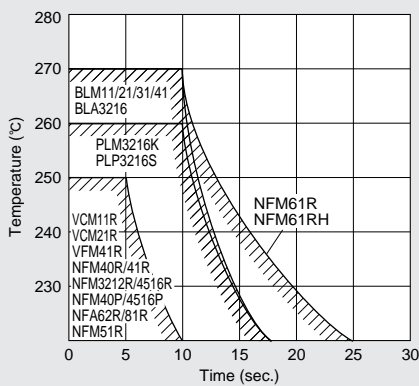

(1) Soldering Methods

Use flow and reflow soldering methods only.
 Use standard soldering conditions when soldering chip EMI suppression filters, Chip Varistor.
 In cases where several different parts are soldered, each having different soldering conditions, use those conditions requiring the least heat and minimum time.

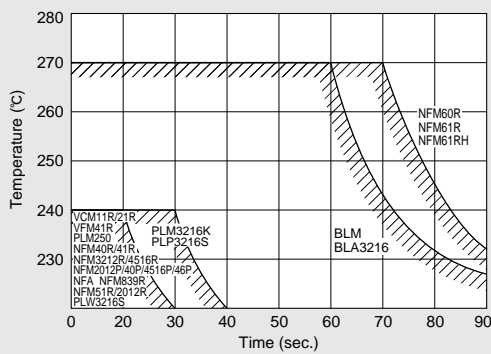

(2) Soldering Temperature and Time

To prevent external electrode solder leaching and performance deterioration, solder within the temperature and time combinations illustrated by the slanted lines in the following graphs. If soldering is repeated, please note that the allowed time is the accumulated time.

• Allowable Flow Soldering Temperature and Time

• Allowable Reflow Soldering Temperature and Time

(3) Solder and Flux

Solder : H60A H63A solder (JIS Z3282)
 Flux : Use Rosin-based flux (when using RA type solder, clean products sufficiently to avoid residual flux.
 : Do not use strong acidic flux (with chlorine content exceeding 0.20wt%).
 : Do not use water-soluble flux.

(4) Reworking with Soldering Iron

The following conditions must be strictly followed when using a soldering iron.
 Preheating : 150°C, 1 minute
 Soldering iron : 30W max.
 Tip Temperature : 280°C max.
 Soldering Time : 10 second max.
 Do not allow the tip of the soldering iron to contact the chip directly.
 For additional methods of reworking with soldering iron. Please contact Murata engineering.

(5) Soldering Conditions

4. Cleaning

Following conditions should be observed when cleaning chip EMIFIL[®].

- (1) Cleaning temperature : 60°C max. (40°C max. for CFC alternatives and alcohol cleaning agents)
- (2) Ultrasonic
 - Output : 20W/l max.
 - Duration : 5 minutes max.
 - Frequency : 28 to 40kHz
- (3) Cleaning agent

The following list of cleaning agents have been tested on the individual components. Evaluation of final assembly should be completed prior to production.
Do not clean PLM250, PLW3216S series.
As for details of cleaning, please contact us.

 1. CFC alternatives and alcohol cleaning agents
 - Isopropyl alcohol (IPA)
 - HCFC-225
 2. Aqueous cleaning agent
 - Surface active agent (Clean Thru 750H)
 - Hydrocarbon (Techno Cleaner 335)
 - High grade alcohol (Pine Alpha ST-100S)*
 - * VFM41R/VCM11R/21R series cannot be cleaned with high grade alcohol type aqueous cleaning agent.
 - Alkaline saponifier (Aqua Cleaner 240-cleaner should be diluted within 20% using deionized water.)
- (4) Ensure that flux residue is completely removed.
Component should be thoroughly dried after aqueous agent has been removed with deionized water.
- (5) Some products may become slightly whitened. However, product performance or usage is not affected.
For additional cleaning methods, please contact Murata engineering.

5. Operating Environment

Do not use products in corrosive gas such as chlorine gas, acid or sulfide gas.

6. Storage and Handling Requirements

- ① Storage Period

Products should be used within 12 months. Since after our inspection, which can be confirmed with inspection No. marked on the container.
Solderability should be checked if its period is over.
(NFM41P/46P, VCM series should be used within 6 months)
- ② Storage conditions
 - a) Storage temperature : -10 to +40°C
Relative humidity : 30 to 70%
Avoid sudden changes in temperature and humidity.
 - b) Do not store products in corrosive gas such as chlorine gas, acid or sulfide gas.

Ferrite Bead Inductor **BL01/02/03** Series

BL01/02/03 series have put their lead through ferrite beads to produce a high frequency loss for suppression of noise. Simple construction and easy-to-use. Effective for low impedance circuits such as of power supply and ground. Effective also for overshoot of digital signal in clock or the like, preventing undershoot and suppressing of higher harmonic wave. Suitable for prevention of abnormal oscillation at high frequency amplifying circuit.

■PART NUMBERING

(Please specify the part number when ordering.)

- ① Bead Inductor
- ② Series Name (01 : Axial type, 02 : Radial type, 03 : Radial compact type)
- ③ Bead Characteristics, Quantity
- ④ Lead Configuration

● Operating Temp. Rang -25 to 85°C

■DIMENSIONS (Please refer to pages 95 to 96 for taping specs.)

Axial Type BL01

■ FEATURES

1. Reduces on-board height because of axial lead.
2. PCB pattern can be designed underneath since the specific resistance of the material is great enough.

■ RATINGS (Please refer to pages 95 and 96 for taping specs.)

Part Number	Type	Rated Current	Dimensions
BL01RN1-A62	Straight	7A	Fig.1
BL01RN1-A62B1	Bent	7A	Fig.2

■ FREQUENCY CHARACTERISTICS

● BL01RN1

Radial Type BL02RN1

■ FEATURES

- Reduces mounting area because of radial lead.

■ RATINGS (Please refer to pages 95 and 96 for taping specs.)

Part Number	Type	Rated Current	Dimensions
BL02RN1-R62	Single-Crimp	7A	Fig.3
BL02RN1-R65	Double-Crimp	7A	Fig.4

■ FREQUENCY CHARACTERISTICS

● BL02RN1

Radial Type BL02RN2

■ FEATURES

1. Reduces mounting area because of radial lead.
2. More effective noise suppression by using two beads.

■ RATINGS (Please refer to pages 95 and 96 for taping specs.)

Part Number	Type	Rated Current	Dimensions
BL02RN2-R62	Straight	7A	Fig.5
BL02RN2-R65	In-Crimp	7A	Fig.6

■ FREQUENCY CHARACTERISTICS

● BL02RN2

Compact Radial Type BL03

■ FEATURES

1. Can be mounted at 2.54 mm pitch.
2. Reduces mounting area because of radial lead.

■ RATINGS (Please refer to pages 95 and 96 for taping specs.)

EMI SUPPRESSION FILTERS

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

Disc-Type EMIFIL® DS□306 Series

Compact, high performance EMI suppression filters, DS□306 series can be mounted at 2.54mm pitch. Excellent cost-performance and compact enough to be applied to any type of equipment.

FEATURES

1. Because of its high noise suppression effect, it can be safely used even where adverse electromagnetic fields exist.
2. Plate type dielectric plus 3-terminal construction produces excellent high-frequency characteristics.

APPLICATIONS

1. Helps office equipment (such as facsimiles, PPCs, electronic typewriters) meet FCC, VCCI and VDE regulations.
2. Helps peripheral equipment (such as computers and displays, FDDs, printers) meet the FCC, VCCI and VDE regulations.
3. Digital TVs, VCRs.
4. Improves noise resistance of automotive electronics.

EMI SUPPRESSION FILTERS

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

Wide Band Disc-Type EMIFIL® DS□310 Series

High Performance EMI Filter. Large Suppression Effect for Meeting Various Noise Regulations.

DS□310 series is a high performance EMI filter made of large, high performance ferrite bead cores and ceramic capacitors all produced by Murata's unique technology. DS□310 series offers excellent noise suppression and meets various safety standards, such as FCC and CISPR.

FEATURES

1. By using large ferrite beads, higher attenuation can be obtained in a wide band.
2. Safe to use even under high rated voltage and in electromagnetic environment.
3. Due to the use of plate type dielectrics, residual inductance is small and high frequency characteristics are excellent.
4. High speed mounting can be made by auto insertion machine.
5. Mountable on PCBs. General cost performance is excellent.

APPLICATIONS

- Suppression of unwanted radiation from computers, peripherals, printers, FDD, word-processors, etc.
- Improvement of noise resistance of car electronic devices such as engine controllers, radios, etc.
- Facsimiles, PPCs, electronic typewriters, other office equipment.
- Noise suppression of other general digital equipment. Meet VCCI, FCC, CISPR, and other regulations.

EMI SUPPRESSION FILTERS

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

Heavy Duty Disc-Type EMIFIL® DS□310H Series

High Performance EMI Suppression Filter with 250Vdc Rated Voltage

DS□310H series is a high performance EMI suppression filter made of large, high performance ferrite bead cores. This series for the circuits where the DS□306 series and the BL02 series are less effective and where the high rated voltage is required.

FEATURES

1. By using large ferrite beads, higher noise suppression effect can be obtained in a wide band.
2. Safe to use even under high rated voltage and in electromagnetic environment.
3. Due to the use of plate type dielectric and of 3-terminal construction, high frequency characteristics are excellent.

APPLICATIONS

- Improved noise resistance for automotive electronics.
- Helps office equipment (such as facsimiles, PPCs, electronic typewriters) meet FCC, VCCI and VDE regulations.
- Digital noise suppression for microcomputer controlled home appliance products, and improvement of noise resistance of microcomputer.
- Digital TVs, VCRs.

EMI SUPPRESSION FILTERS

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

EMIGUARD® VFR303/DSS706/DSS710 Series

3-Terminal varistor-capacitor EMI filter. Enables simultaneous EMI suppression and surge protection

The EMIGUARD® VFR303, DSS706, and DSS710 series EMI suppression filters incorporate capacitors that have a varistor function to enable simultaneous EMI noise suppression and surge protection functions.

These varistor-enabled capacitors act not only as bypass capacitors against noise but also as surge protectors that route most of the surge current from high voltage power surges to ground to protect the circuits.

Furthermore, the three-terminal structure provides excellent performance characteristics in the high-frequency range, making these filters effective against high-frequency noise and short rise-time surges which are difficult to combat with ordinary capacitors and varistors.

The VFR303 series is for protecting semiconductor devices, the DSS706 series is for use on signal lines, and the DSS710 series is for use on power supply lines.

EMI SUPPRESSION FILTERS

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

EMIGUARD® for Semiconductor Protection VFR303 Series

FEATURES

1. Absorb ESD surge rushed into IC's I/O terminal efficiently, protect IC from destruction.
2. Thin and low height shape enables high density mounting.
[The volume ratio 57% in comparison with conventional EMIFIL® (DSS306)]

APPLICATIONS

Elimination of noise and protection of semiconductors in office equipments, including computers and peripheral equipments, copy machines, and communication terminals.

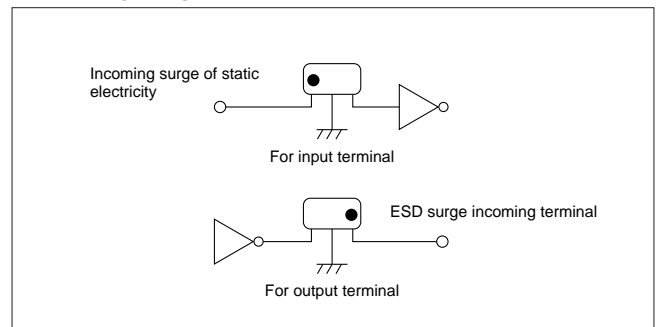

APPLICATIONS (VFR303-351 AY 25)

Item	Specification	Item	Specification
Rated Voltage (Between Terminals (1)-(2))	25Vdc	Capacitance (Between Terminals (1)-(2))	130pF±20%
Varistor Voltage (Between Terminals (1)-(2))	50Vdc±20%	Capacitance Temp. Char.	±20/30%
Rated Current (Between Terminals (1)-(3))	20mAdc	Insulation Resistance (Between Terminals (1)-(2))	10MΩ min.
Peak Pulse Current (Between Terminals (1)-(2))	15A	DC Resistance (Between Terminals (1)-(3))	150Ω±35%
ESD Test (150pF, 330Ω) (Between Terminals (1)-(2))	15kV 100times	Operating Temp. Range	-25 to +85°C

INSERTION LOSS CHARACTERISTICS (TYPICAL)

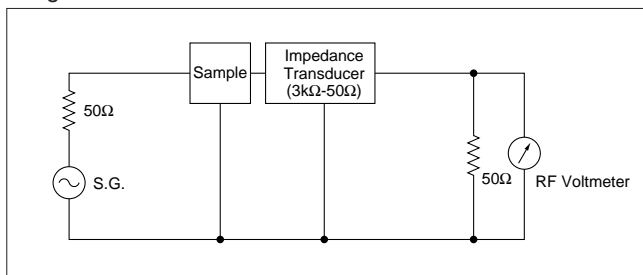

APPLICATION

Please connect 1st terminal (marked terminal) to ESD surge incoming line. (Please pay attention for direction.)

INSERTION LOSS MEASURING CIRCUIT

Measurement is performed by using 50Ω-3kΩ measuring circuits in order to match operating conditions of the digital signal circuit.

EXAMPLE OF IC PROTECTION

● Testing Method

1. Put ESD surge to IC (7404 family) input terminal with ESD simulator based on IEC 801-2.
2. Check IC's operation.
3. If IC's operation is normal, increase ESD voltage in 1kV step.
4. Continue above steps 1 to 3 till IC's operation become abnormal.

EMI SUPPRESSION FILTERS

EMIGUARD® is the trademark of Murata Manufacturing Co., Ltd.

EMIGUARD® for Signal Lines DSS706 Series

FEATURES

1. Protects electric circuit from surges such as static electricity, acts as a filter for signal line immunity.
2. Small size enables it to be mounted at 2.54mm pitch. 3-terminal structure leads to superior high frequency characteristics.
3. Built-in ferrite bead gives excellent EMI suppression.

APPLICATIONS

Elimination of noise and protection of semiconductors in office automation equipment, including computers and their peripheral equipment, copy machines, and communication terminals.

VOLTAGE-CURRENT CURVE

APPLICATION

Systems	Lines to be connected	Effects
Engine Controllers	Power lines, I/O lines for low-frequency current	Protection of systems from excessive voltage. Prevents ignition noise, thunder surges, etc. From causing malfunctions.
Automobile Audio Equipment	Power lines, audio output lines	Protection of systems from excessive voltage. Prevents ignition noise from influencing audio current.
Computers	Power lines, I/O lines for low-frequency current	Protection of systems from excessive voltage. Prevents radiation and conduction noise.
DC Motors	Power lines	Prevention of brush noise.

FEATURES

Items	Rated values	Test methods
Overload		1.4 times the varistor voltage (V_1) is applied for 5 minutes at room temperature.
Surge Test (I)		At room temperature. Surge are applied are 10^5 times every 2 seconds. Then after 1 or 2 hours, the sample is measured.
Surge Test (II)	Rated Capacitance Change : Within $\pm 15\%$ Insulation Resistance : $500k\Omega$ min. Rated of Change in Varistor Voltage V_1^* : Within $\pm 15\%$ Voltage Rate : 1.30 max.	At room temperature. Capacitor "C" is changed with 70V, then discharged to apply the voltage to the sample. Tested once (resuming JASO A-1). 
High Temperature Load		At a temperature of $85\pm 3^\circ C$. The varistor voltage V_1 is continuously applied to the sample for 1000 to 1024 hours. Then it is left at room temperature, for 4 to 24 hours before measuring.

* V_1 : Voltage when 1mA is applied

PULSE-VOLTAGE BREAKDOWN CHARACTERISTIC

The DSS710 EMIGUARD® use a self healing varistor- capacitor, so that it can be used under a 500 to 600V surge which would break conventional disk type EMI filters. As shown in figure below the EMIGUARD® withstands 2000V impulses applied 1000 times.

NOISE ABSORPTION EFFECT OF EMIGUARD®

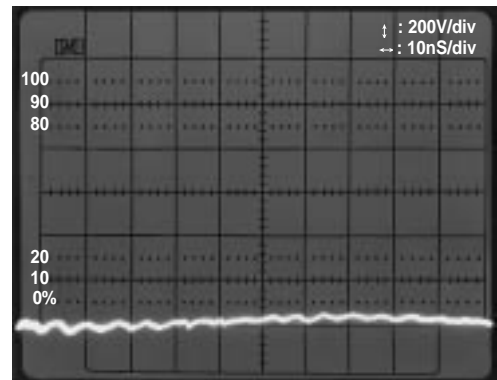

Waveform when EMIGUARD® is not used. (Surge from a noise simulator)

EMIGUARD® is used to suppress the surge shown at left.

EMIGUARD® capable of removing even 1200V surge

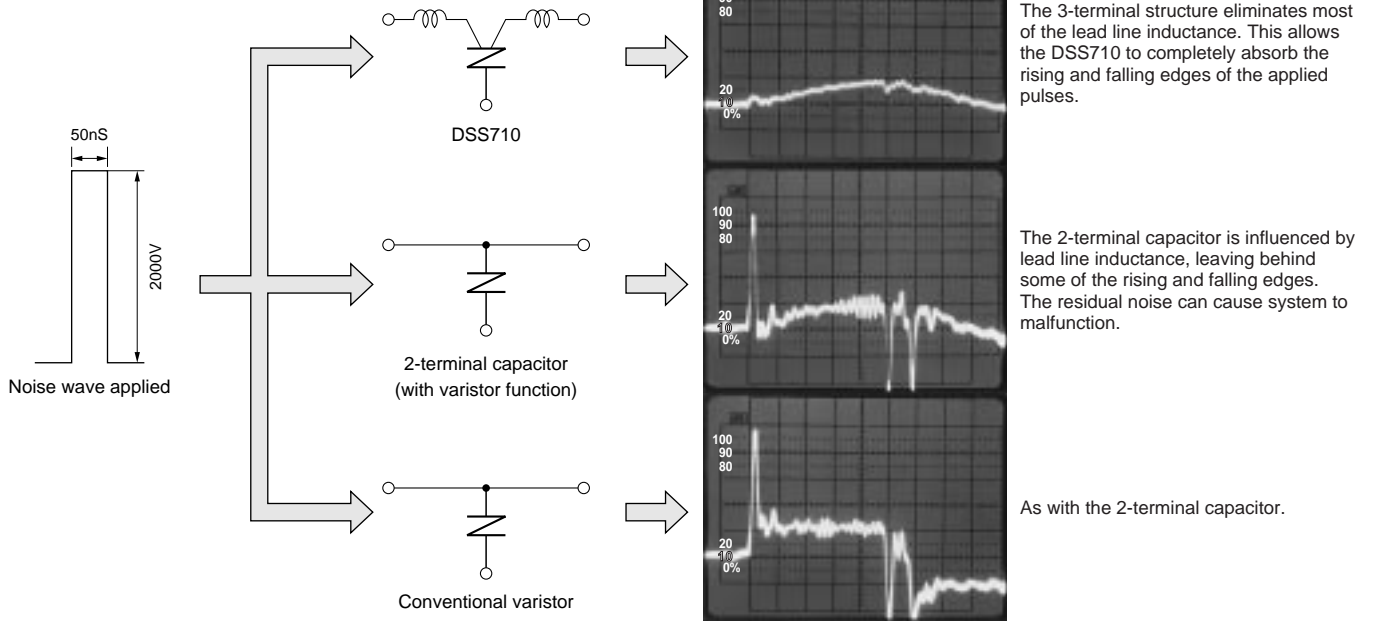

Waveform after the noise passed through EMIGUARD®. Little noise is recorded.

TEMPERATURE CHARACTERISTICS OF VARISTOR VOLTAGE-INSULATION RESISTANCE

EMIFIL® for Automatic Insertion **BL01/02/03** Series

Any Type of bulk BL01/02/03 series can be taped for automatic insertion. (Except for BL01RN1-A62B1)

■PART NUMBERING

(Please specify the part number when ordering.)

Code	Description
T2	Radial Type H=16.5mm
T4	Radial Type H=18.5mm
T5	Axial Type Tape Width 52mm
T6	Axial Type Tape Width 26 mm

(Ex.) BL02RN1-R65 **T2**
 BL02RN2-R62 **T4**
 BL01RN1-A62 **T5**
 BL01RN1-A63 **T6**

- Same as the bulk type with the only exception of taping specs stated in the box. (NOTE : A63 applies only when designed as T6.)

■RATINGS

1. Allowable current is 6A.
2. All other ratings are the same as those of bulk types. (Refer to pages 78 to 79)

EMI SUPPRESSION FILTERS

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

Block Type EMIFIL® BNP/BNX Series

Completely Eliminates Noise in a Wide Range of Complex Circuits from 0.5MHz to 1GHz Mountable on Any Type of P.C. Board

Murata's new block type EMIFIL® BNP/BNX series completely eliminate noise from extremely wide frequency bands. The BNX is perfect for use in DC power circuits, while the BNP is ideal for eliminating noise in logic signal circuits. Both are designed to perform superbly the result of Murata's wide expertise in the fields of through-type barrier layer capacitors, monolithic chip capacitors and bead

inductors.

Each block contains a number of compact EMI suppression filters. In addition, the input/output terminals and the grounding terminal are aligned in the same direction, thus permitting fast and easy assembly on any type of P.C. board.

BNP

[for signal circuit]

BNP002-02

BNP002-03

BNP004-02

BNX

[for DC power supply]

BNX002-01

BNX003-01

BNX005-01

■FEATURES

1. The EMIFIL® BNP002 incorporates through-type barrier layer capacitors and π circuits, allowing it to obtain significantly large insertion losses throughout an extremely wide frequency range from 15MHz up to 1GHz.
2. The cut-off frequency is designed to be at several MHz, which is ideal for eliminating noise from any circuit in which the signal frequency and the noise frequency are relatively close together.
3. Since all noise in plural signal lines can be eliminated by one filter block, the filter is extremely compact.
4. There are no connection routes in the current circuits, thus ensuring highly reliable performance.
5. Both the input/output terminals and the grounding terminal are aligned in the same direction, permitting fast and easy installation on any type of P.C. board.

■APPLICATIONS

Noise elimination from signal lines and DC power sources in engine control units, digital equipment and computer terminals.

■FEATURES

1. The EMIFIL® BNX002 incorporates a through-type barrier layer capacitor and a four-terminal capacitor which are interconnected. This combination enables the BNX002 to achieve a significantly large insertion loss throughout the extremely wide frequency range of 0.5MHz to 1GHz which covers the AM and UHF-TV broadcast frequency bands.
2. The filter is extremely compact since only one filter block is needed to completely eliminate noise from both the positive and negative lines.
3. There are no connection routes in the current circuits, thus ensuring highly reliable performance.
4. Both the input/output terminals and the grounding terminal are aligned in the same direction, permitting fast and easy installation on any type of P.C. board.
5. BNX003-01 features high dielectric constant, that is the rated voltage 150V.

■APPLICATIONS

Noise elimination from DC power sources in a variety of switching power sources, engine control units, digital equipment and computer terminals.

■EFFECTIVE FREQUENCY RANGE OF BNP/BNX SERIES (IN CASE OF LINE IMPEDANCE 50Ω)

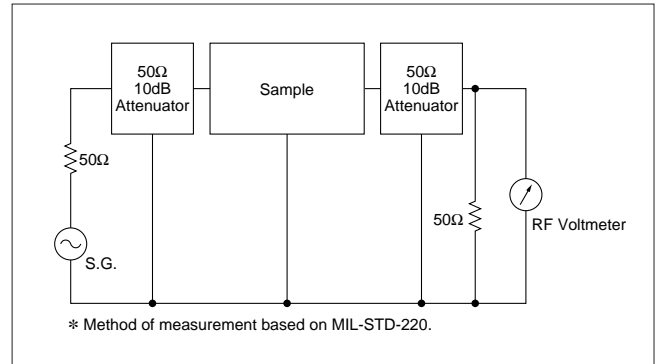

■ SPECIFICATIONS

Part Number	BNP002-02	BNP002-03	BNP004-02
Number of Circuits	2	3	2
Circuit Construction	π		
Operating Temp. Range	-40 to +100°C		
Rated Voltage	50Vdc		
Withstand Voltage	300Vdc		125Vdc
Rated Current	10Adc		
Insulation Resistance	1000M Ω min.		
DC Resistance	0.05 Ω max. (20 to 25°C)		
Insertion Loss	20MHz to 500MHz : 40dB min. (20 to 25°C)		300MHz to 1000MHz : 40dB min. (20 to 25°C)

■ APPLICATION CIRCUIT OF BNX SERIES

Method of using the BNP and BNX filter blocks, and applications.

■ USING EMIFIL® EFFECTIVELY

The block type EMIFIL® effectively prevents unwanted reflections and external noise from entering the equipment circuitry and power lines by grounding all the high frequency components which make up the noise.

Therefore, if grounding is improperly done, the filters may be unable to achieve the performance they are capable of. To prevent this, be sure to observe the following instructions.

1. When designing the P.C. board, use all the available grounding terminals, and arrange the grounding circuit so that the area of the foil for the grounding circuit is maximized.
2. Minimize the distance between the P.C. board ground and the filter's grounding plate. Use of through-hole P.C. boards.
3. Whichever P.C. board is used, push the filter into the P.C. board up to the terminal roots.
4. Do not connect PSG to CG by any other means except through the filter.

■ APPLICATION 1

- Suppression of DC side ripple of the switching power supply

- When BNX002 is not used

(High frequency noise, max. 0.5V, can be seen.)

+5.0V →
50μs/DIV
0.2V/DIV

- When BNX002 is used

(Noise can be almost suppressed by BNX002.)

+5.0V →
50μs/DIV
0.2V/DIV

■ PART NUMBERING

(Please specify the part number when ordering.)

(Ex.) **BNP** **002** - **02**

① ② ③

- ① Type : BNP—BNP Series
 : BNX—BNX Series
- ② Construction : The series number shows the circuit construction or the filter characteristics.
- ③ Number of Circuits : Shows the number of circuits, which are constructed one product.

EMI SUPPRESSION FILTERS

EMIFIL® is the trademark of Murata Manufacturing Co., Ltd.

DC Common Mode Choke Coil **PLT/PLT09H** Series

Compact, Light Weight, Common Mode Choke Coil for DC Power Supplies for Common Mode Noise Suppression for Several MHz to Several Hundred MHz

The PLT/PLT09H series DC common mode choke coils are EMI suppression filters that are effective against the common mode noise that can cause radiative noise in power supply lines and interface lines.

Unlike capacitor-based filters, these choke coils do not require a grounding terminal, making them applicable in situations where a stable ground cannot be obtained.

PLT

PLT09H

■FEATURES

1. The high degree of coupling enables effective suppression of common mode noise without appreciably altering the normal mode signal waveforms even when the signal and noise frequencies are close to each other.
2. Small footprint type.

■FEATURES

1. This is a wide frequency range type, applicable in applications ranging from a few MHz to several 100 MHz.
2. It features a low-profile design.

■APPLICATIONS

- For suppressing noise radiation from interface cables of digital equipment such as computers and computer peripherals.
- For suppressing noise radiation from the power supply cords of digital equipment that uses AC adapters.

■DIMENSIONS

■ INSERTION LOSS CHARACTERISTICS

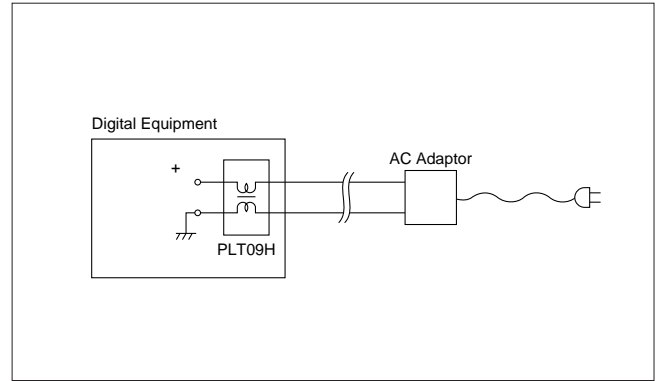

■ CIRCUIT DIAGRAM

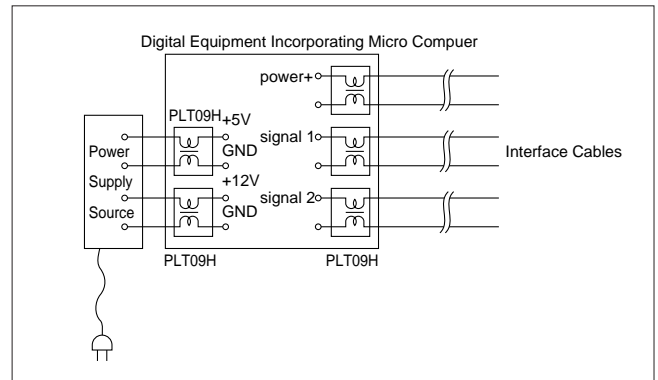

■ EXAMPLES OF APPLICATION

1. Suppression of noise radiating from cables between AC adaptor and main set.

2. Suppression of noise radiating from DC power lines and interface cables.

■ USING EMIFIL® EFFECTIVELY

To prevent degradation of the noise-suppression effect caused by an imbalance in current, be sure that the reciprocating current is equivalent on each side.

Notice of Lead Type EMIFIL®

■ ⚠ CAUTION

- Rated current/Rated voltage
 - Don't use products beyond the rated current and the rated voltage, or, a fire may result due to the deterioration of the insulation resistance, excessive heat, etc.
- Mounting holes should be designed as specified in this specifications. Or different design from this specifications may cause cracks in ceramics which may lead to smoking/firing.

■ NOTICE

- Soldering
 - Rosin-based flux is to be used. Do not use strong acidic flux with halide content exceeding 0.2wt% (chlorine conversion value).
 - When soldering, do not exceed 5 seconds and keep 240 to 260°C
 - When soldering, avoid mechanical stress to main body or lead wire terminal product.
- Cleaning
 - Do not clean VFR303, PLT09H, and DSS706 series.
 - Clean other parts on following condition.
 - Cleaning Temperature: 60°C max.(40°C max. for CFC alternatives and alcohol cleaning agents).
 - Ultrasonic
 - Output : 20W/ℓ max.
 - Duration : 5 minutes max.
 - Frequency : 28kHz to 40kHz
 - Cleaning agent

The following list of cleaning agents have been tested on the individual components. Evaluation of final assembly should be completed prior to production.

 - CFC alternatives and alcohol cleaning agents.
 - Isopropyl alcohol (IPA)
 - HCFC-225
 - Aqueous cleaning agent
 - (PLT series cannot be cleaned)
 - Surface active agent (Clean Thru 750H)
 - Hydrocarbon (Techno Cleaner 335)
 - High grade alcohol (Pine Alpha ST-100S)
 - Alkaline saponifier (Aqua Cleaner 240-cleaner should be diluted within 20% using deionized water).
 - Ensure that flux residue is completely removed. Component should be thoroughly dried after aqueous agent has been removed with deionized water.
 - Some products may become slightly whitened. However, product performance or usage is not affected.

For additional cleaning methods, please contact Murata engineering.

- Operating Environment
 - Do not use products in corrosive gas such as chlorine gas, acid or sulfide gas.
 - Do not use products near water, oil or organic solvents, Avoid environments where dust or dirt may adhere to product.

4. EMIGUARD®

- VFR303 series is designed only to absorb electrostatic surges. Do not use this product to absorb large energy surges such as lighting or switching related surges.
- In ESD test with VFR303, do not use in the conditions exceeding next conditions.

$$n \cdot \left\{ \frac{C}{R} V^2 \right\} < 8.0 \times 10^5$$

n : Number of ESD injection
 C : Charge/Discharge Capacitance (pF)
 R : Discharge Resister (Ω)
 V : Test Voltage (kV)

5. Storage and Handling Requirements

- Storage conditions
 - Storage temperature : -10 to +40°C
 - Relative humidity : 30 to 70%
 - Avoid sudden changes in temperature and humidity.
- Do not store products in corrosive gas such as chlorine gas, acid or sulfide gas.

EMC ABSORBER

EMC absorber EA10/20/21 Series

Suitable for Micro Wave Absorbing Wide Range from 100MHz to 20GHz Thin and Flexible Type EMC Absorber

FEATURES

EA10xx Series

1. Excellent elasticity and durability with silicon rubber.
2. Suitable for prevention abnormal oscillation in high frequency module, suppression spurious spectra and interference between circuits.
3. Holding easily in equipments with adhesive tape.
4. EA10xx series : UL94V-0 conformity.

EA20xx/21xx Series

1. High- μ and High-loss characteristics with magnetically shielded can suppress noise in wide frequency band for digital equipments.
2. Thin (0.2mm-1.0mm) and flexible sheet makes easy handling in assembly process.
3. Holding easily in equipments with adhesive tape.
4. EA20xx series : Non Halogen type.
EA21xx series : UL94V-0 conformity.

EMI SUPPRESSION FILTERS

EMI Suppression Filter Design Kits **EK115E/EK015D**

■EMIFIL® Design Kit EK115E/015D

The EMI suppression filter design kit EK115E/015D has each of the filters in a plastic case to facilitate selection when testing the noise suppression capabilities of the EMIFIL® range.

The kit can be used equally well either on-site or in the laboratory.

(When ordering, please use the part number EK115E or EK015D.)

Industrial Process Measurement and Control Equipment			IEC801 Series	Industrial Voluntary Action		
Radio, TV			CISPR Pub. 20			EN55020
ITE : Information Technology Equipment			CISPR Pub. 24			EN55024

There are EMI regulation in each country to meet EMI noise level emitted from digital equipment.
In the countries which regulates EMI, equipments which do not satisfy with regulations are not allowed to be sold.

Outlines of Major Noise Regulation Standards

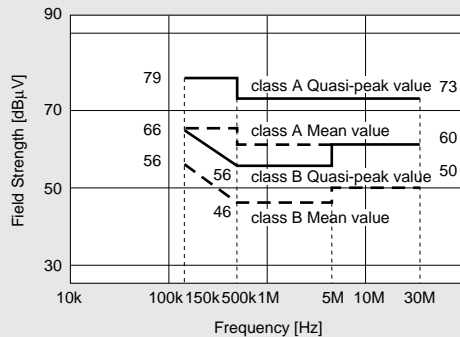

2. Measurement Point and Noise Detection

Regulation	Measuring Item	Polarization and Measuring Point	Frequency (Hz)	Detection	Measuring Devices
CISPR Pub. 22	Radiated Interference	Horizontal Pol. Vertical Pol.	30M to 1GHz	Quasi-Peak Detection	Antenna
EN55022	Mains Interference Voltage	AC Mains Ports	150k to 30MHz	Quasi-Peak Detection Mean Detection	Artificial Mains Network
VCCI	Radiated Interference	Horizontal Pol. Vertical Pol.	30M to 1GHz	Quasi-Peak Detection	Dipole Antenna
	Mains Interference Voltage	AC Mains Ports	150k to 30MHz	Quasi-Peak Detection Mean Detection	Artificial Mains Network
FCC Part 15	Radiated Interference	Horizontal Pol. Vertical Pol.	30M to 1GHz	Quasi-Peak Detection Mean Detection	Antenna
	Mains Interference Voltage	AC Mains Ports	450k to 30MHz	Quasi-Peak Detection	Artificial Mains Network

3. Limits of CISPR Pub. 22/EN55022

Mains Terminal Interference Voltage (Power Supply)

Radiated Interference

On the border frequency, lower limit shall be applied.

Class A Equipment : The equipment which is used in light industries area or commercial area.

Class B Equipment : The equipment which is used in residential area.

CISPR Pub.22 recommends measurement at 10m distance. However, other distance is acceptable if the limitation is converted according to following calculation. Limitation show left is converted to limitation for 3m distance.

Conversion

Limitation for 10m Distance	\rightarrow	Limitation for 3m Distance
R_{10} (dB μ V/m)		R_3 (dB μ V/m)
r_{10} (μ V/m)		r_3 (μ V/m)
$R_{10}=20 \log r_{10}$		$R_3=20 \log r_3$
$R_3=R_{10}+20 (1-\log 3)$		
$r_3 = \frac{10}{3} r_{10}$		

Outlines of Major Noise Regulation Standards

Scope of CISPR Pub.22 Regulation

This regulation applies to information technology equipment (ITE) which are defined as :

- (a) Equipment that receive data from external signal sources ;
- (b) Equipment that processes received data ;
- (c) Equipment that output data
- (d) Equipment that has less than 600V rated voltage in power supply

CISPR Regulations

- Pub.10 Organization, Regulations and Procedures of CISPR
- Pub.11 Industrial, Scientific and Medical (ISM) Radio-Frequency Equipment
- Pub.12 Vehicles, Motor Boats and Spark-Ignited Enginedriven

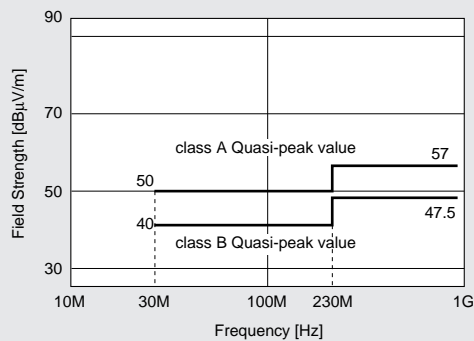

- Pub.13 Sound and Television Receivers
- Pub.14 Household Electrical Appliances, Portable Tools and Similar Electrical Apparatus
- Pub.15 Fluorescent Lamps and luminaries
- Pub.16 Radio Interference Measuring Apparatus and Measurement Methods
- Pub.17 Passive Radio Interference Filters and Suppression Components
- Pub.18 Power Transmission Cables and High Voltage Equipments
- Pub.19 Microwave Ovens for Frequencies above 1GHz
- Pub.20 Immunity of Sound and TV Broadcast Receivers Veceivers and Associated Equipment
- Pub.21 Interference to Mobile Radiocommunications in the Presence of Impulsive Noise
- Pub.22 Information Technology Equipment
- Pub.23 Industrial Scientific and Medical (ISM) Equipment
- Pub.24 Immunity Regulation of Information Technology Equipment

4. Limits of VCCI Voluntary Regulation

Mains Terminal Interference Voltage (Power Supply)

Radiated Interference

On the border frequency, lower limit shall be applied.

- Class B ITE : Equipment that designed to be used at home.
- Class A ITE : Equipment that does not meet interference limit of class B equipment. However satisfying interference limit of class A equipment.

VCCI recommend measurement at 10m distance. 3m or 30m distance measurement are also allowed.

Main Terminal Interference Voltage of 150kHz to 526.5kHz.

- From 1999 April, New products shall be applied with easing 10dB.
- From 2001 April, New products shall be applied with easing 0dB.

Scope of VCCI Voluntary Regulation

This regulation applies to information technology equipment (same as CISPR Pub.22), but the application is excluded on the following equipments :

- Equipment for which other regulations already exist (e.g., household electrical appliances, radio and TV receivers)
- In station equipment principal purpose of which is electrical communication
- Industrial plant control system for which information processing is a secondary system function
- Industrial, commercial and medical testing and measuring systems for which data processing is a secondary system function

- Information equipment for which CISPR is conducting further deliberation
- VCCI is the acronym of Voluntary Control Council for Interference by Data Processing Equipment and Electronic Office Machines.
- VCCI is organized by the following organizations :
- Japan Electronic Industry Development Association (JEIDA)
 - Japan Business Machine Makers Association (JBMA)
 - Electronic Industries Association of Japan (EIAJ)
 - Communication Industries Association of Japan (CIAJ)

Outlines of Major Noise Regulation Standards

5. Limits of FCC Part 15 Subpart B

Mains Terminal Interference Voltage (Power Supply)

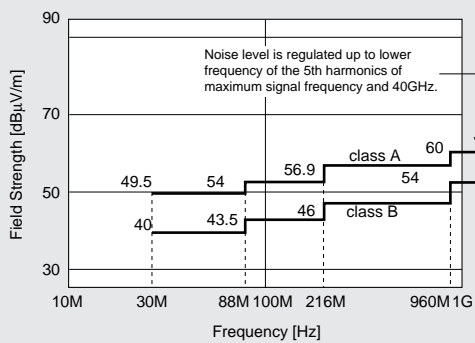

Class A Equipment : The digital equipment that is sold to in the commercial, industrial and office use.

Class B Equipment : The digital equipment that is sold to be used in residential area.

Class A recommend to be measured with 10m distance.

Class A recommend to be measured with 3m distance.

Radiated Interference

On the border frequency, lower limit shall be applied.

- The FCC Part 15 regulation controls radiated interference by establishing quasi-peak and mean value limits for frequencies ranging from 30MHz to 40GHz (or maximum frequency's fifth harmonic, whichever is lower).
- For AC main ports, the FCC Part 15 regulation controls mains terminal interference voltage by establishing quasi-peak value limits for frequencies ranging from 450kHz to 30MHz.
- There is no regulation on interference power.

FCC Regulations

- Part 1 Procedures
- Part 2 Frequency Division and Radio Wave Treaty Issues and General Rules
- Part 15 Radio Wave Equipment
 - Intentionally electromagnetic radiation equipment
 - Non-intentionally electromagnetic radiation equipment
 - Incidentally electromagnetic radiation equipment
- Part 18 Industrial, Scientific and Medical Equipment
- Part 22 Public Mobile Wireless Operations
- Part 68 Connecting Terminal Equipment to Telephone Circuit Network
- Part 76 Cable Television

Measurement Frequency Range for Radiated Interference

Maximum Frequency the Equipment Internally Generates, Uses or Operates or Synchronizes (MHz)	Upper End of Measurement Frequency Range
Less than 1.705	30
1.705 to 108	1000
108 to 500	2000
500 to 1000	5000
Over 1000	Maximum Frequency's Fifth Harmonic or 40GHz, Whichever is Lower

Outlines of Major Noise Regulation Standards

6. Immunity Regulations in Europe Union

All products which are sold in EU must satisfy EC directive which contains immunity regulation.

Principal EC Directive	
EMC Directive	89/336/EEC 92/31/EEC
Low-Voltage Electrical Products Directive	73/23/EEC
Machines Directive	89/392/EEC

All electric/electronic equipment cannot be sold in Europe without CE marking. To use CE marking, they must satisfy related EC directive such as EMC directive.

In EMC directive, EMI regulations are integrated, and immunity regulations are applied. Although these immunity regulations are prepared by CENELEC, almost all contents are same as standards issued by IEC or CISPR.

Noise regulations in EU is prepared by CENELEC. Their contents are almost same as IEC or CISPR regulations.

Standard	Application	IEC	CISPR	CENELEC
Basic Standard		IEC61000-4		EN61000-4
Generic Standard		Residential, Commercial and Light Industry In the process of IEC61000-6-1 (IEC61000-6-3) Industrial In the process of IEC61000-6-2 (IEC61000-6-4)		Residential, Commercial and Light Industry EN50082-1 (EN50081-1) Industrial EN50082-2 (EN50081-2)
Product Family Standard	Radio, TV		CISPR Pub. 20 (CISPR Pub. 13)	EN55020 (EN55013)
	Information Technology Equipment		CISPR Pub. 24 (CISPR Pub. 22)	EN55024 (EN55022)
Product Standard				

Standards in bracket are Emission Standards.

Noise Suppression Principles by DC EMIFIL®

● **Function of DC EMI Suppression Filters**

DC EMI suppression filters absorb and eliminate high frequency noise which may produce electromagnetic interference in PC board circuits.

These filters are used in secondary circuits, and are small in size and light in weight, which further enhances their excellent noise suppression functions.

Chip and adhesive type filters can be mounted on PC boards automatically.

These filters are effective in the suppression of radiation noise in computers, peripheral equipment, and digital circuit application equipment (including various types of microcomputer application equipment), and function to suppress noise in audio/visual equipment, which uses digital memory chips and DSP.

These filters are also effective for improving the noise immunity of equipment used in noisy environments (such as electronic equipment for automobiles).

● **Noise Filter Suppression Principles**

Generally, noise problems occur when the noise source and electronic equipment sensitive to the influence of noise are located in close proximity to one another.

In such situations, as shown in Fig.A below, noise is conducted through a conductor, which produces an inductive field around the noise source.

To overcome such noise problems, it is preferable to reduce the amount of noise generated by the noise source or improve the noise resistance of adjacent equipment.

In order to satisfy equipment performance specifications and eliminate noise effectively at the same time, however, it is customary to reduce the amount of noise generated by the noise source, if it can't be eliminated altogether.

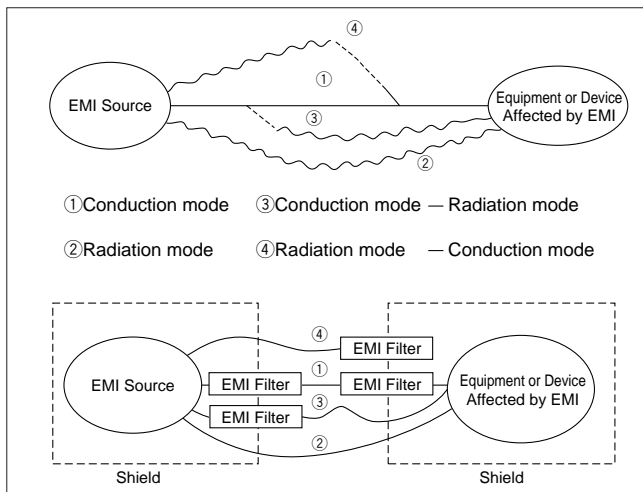

Fig.A EMI Propagation Mode and Model of Noise Filter Suppression

● **Configuration of EMI Suppression Filters (DC)**

DC EMI suppression filters are used to suppress noise produced by conductors. Noise radiation can be suppressed, if it is eliminated with a filter in advance.

Generally, such noise suppression is achieved with DC EMI suppression filters, according to the capacitive and inductive frequency characteristics of the respective conductors in the circuit.

Filters of this kind can be roughly divided into those :

- (1) employing a capacitor,
- (2) employing an inductor,
- (3) employing a capacitor and inductor combination.

● **Capacitive Noise Suppression**

When a capacitor is connected (bypass capacitor) to ground from a noisy signal line or power line, the circuit impedance decreases as the frequency increases. Since noise is a high frequency phenomenon, it flows to ground if a capacitor has been connected to ground, thereby making it possible to eliminate noise. (See Fig. B below.)

EMI suppression filters employing a capacitor in this way are used to eliminate this type of noise.

Fig.B Capacitive Noise Suppression

● **High frequency Capacitor Characteristics Used for EMI Suppression Filters**

Even general-purpose capacitors can be used for noise suppression. However, since noise has an extremely high frequency range, general-purpose capacitors may not function as effective bypass capacitors, due to the large residual inductance built into the capacitor.

All the capacitors used in MURATA's EMI suppression filters employ a 3 terminal structure or thru-type structure, which functions effectively even at high frequencies, thereby minimizing the influence of residual inductance.

Consequently, an effective filter circuit can be formed even at frequencies exceeding 1GHz. (Refer to Fig. C below.)

Fig.C Equivalent circuit of general-purpose capacitor and 3 terminal capacitor in the high frequency area and comparison of insertion loss

Noise Suppression Principles by DC EMIFIL®

● **Inductive Noise Suppression**

When an inductor is inserted in series in a noise producing circuit (See Fig.D), its impedance increases with frequency. In this configuration it is possible to attenuate and eliminate noise components (high frequency components). The MURATA EMI suppression filter functions in this way.

Fig.D Inductive Noise Suppression

● **Characteristics of Inductors Used in EMI Suppression Filters**

General-purpose inductors also function to suppress noise when configured in series with a noise producing circuit. However, when general-purpose inductors are used, resonance may result in peripheral circuits, signal wave forms may become distorted, and satisfactory impedance may not be obtained at noise frequencies (due to insufficient high frequency impedance characteristics). The inductors used for MURATA's EMI suppression filters are designed to function nearly as a resistor at noise frequencies, which greatly reduces the possibility of resonance and leaves signal wave forms undistorted. And since sufficient impedance is obtained for frequencies ranging to hundreds of MHz, these specifically designed inductors operate effectively to suppress high-frequency noise. (See Fig.E)

Fig.E Example of impedance frequency characteristics of inductor type EMIFIL®

● **Capacitive-Inductive EMI Suppression Filters**

If a capacitive and inductive suppression characteristics are combined, it is possible to configure a much higher performance filter. In signal circuit applications where this combination is applied, noise suppression effects which have little influence on the signal wave form become possible.

This type of filter is also effective in the suppression of high-speed signal circuit noise. When used in DC power circuits, capacitive-inductive filters prevent resonance from occurring in peripheral circuits, thus making it possible to achieve significant noise suppression under normal service conditions.

● **Other EMI Suppression Filters**

In addition to the capacitive-inductive filter, MURATA also has an EMI suppression filter (EMI-GUARD®) combining a capacitor with a varistor, useful for surge absorption; and a common mode choke coil effective, for common mode noise suppression.

MURATA also has a range of built-in filter connectors which greatly reduce filter mounting space requirements.

● **Expressing EMI Suppression Filter Effects**

EMI Suppression Filter effects are expressed in terms of the insertion loss measured in the circuit, normally specified in MIL-STD 220A. As shown in the 50Ω impedance circuit in Fig.5 below, insertion loss is represented by the logarithmic ratio of the circuit output voltage with and without a filter in the circuit, which is multiplied by 20 and expressed in dB. Therefore, an insertion loss of 20dB indicates an out put voltage ratio (B/C) of 1/10, and an insertion loss of 40dB indicates an output voltage ratio (B/C) of 1/100.

Fig.F Measuring Circuit of Insertion Loss

Murata EMI Filter Selection Simulator

The Murata EMI Filter Selection Simulator simulates effects of Murata EMI Filters.

Simulation results are displayed with a Voltage-Waveform chart and a Spectrum-Frequency chart. The filters can be simulated under various circuit conditions.

OPERATION

1. Enter "Input Signal" in the Simulation window.
2. Enter LCR values or select Driver IC from the pull-down list.
3. Enter the part number or select EMI Filter from the pull-down list.
4. Set Transmission Line. (Three ways can be selected.)
5. Enter LCR values or select Receiver IC from the pull-down list.
6. Click on the "Start Simulation" button.
7. Simulation results are displayed on the new window.

Two ways of setting the driver/receiver IC parameter.

The logic IC of TTL and CMOS can be selected from pull-down list. LCR values can also be entered.

Impedance automatically calculated.

Impedance characteristics under actual pattern are automatically calculated. (When the "Configuration" is selected.)

Voltage waveform and voltage-spectrum charts are displayed in the same window. They can also be printed and copied to clipboard.

EMI filters can be selected from the "Select EMI Filter" window.

This application can be downloaded from Murata web site.

<http://www.murata.co.jp/emc/mefss.html>

⚠ Note:**1. Export Control**

〈For customers outside Japan〉

Murata products should not be used or sold for use in the development, production, stockpiling or utilization of any conventional weapons or mass-destructive weapons (nuclear weapons, chemical or biological weapons, or missiles), or any other weapons.

〈For customers in Japan〉

For products which are controlled items subject to the "Foreign Exchange and Foreign Trade Law" of Japan, the export license specified by the law is required for export.

2. Please contact our sales representatives or product engineers before using our products listed in this catalog for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property, or when intending to use one of our products for other applications than specified in this catalog.

- ① Aircraft equipment
- ② Aerospace equipment
- ③ Undersea equipment
- ④ Power plant equipment
- ⑤ Medical equipment
- ⑥ Transportation equipment (vehicles, trains, ships, etc.)
- ⑦ Traffic signal equipment
- ⑧ Disaster prevention / crime prevention equipment
- ⑨ Data-processing equipment
- ⑩ Application of similar complexity and/or reliability requirements to the applications listed in the above

3. Product specifications in this catalog are as of April 2000. They are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before your ordering. If there are any questions, please contact our sales representatives or product engineers.

4. The parts numbers and specifications listed in this catalog are for information only. You are requested to approve our product specification or to transact the approval sheet for product specification, before your ordering.

5. Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or third party's intellectual property rights and other related rights in consideration of your using our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.

6. None of ozone depleting substances (ODS) under the Montreal Protocol is used in manufacturing process of us.
