

# 2 Watt Cellular T/R and Antenna Changeover Switch

## DC - 2.0 GHz

### SW-358, 359A

V2.00

#### Features

- Low Cost Plastic SSOP-8 Package<sup>1</sup>
- Both Positive and/or Negative 3 to 10 V Control
- Low Insertion Loss: 0.4 dB
- Very High Intercept Point: 55 dBm IP<sub>3</sub>
- Very Low Power Consumption: 50µW
- For AMPS, NAMPS, ETACS, NMT, GSM, PCN, PDC, and DECT Applications

#### Description

The SW-358<sup>3</sup> and SW-359A<sup>4</sup> are GaAs MMIC SPDT switches in low cost SSOP 8-lead surface mount plastic packages.

These switches are ideally suited for use where very low distortion and low loss are required. The SW-358 and the SW-359A can be operated with negative, positive, or a combination of positive/negative control voltages. Typical application is an internal/external antenna select switch for portable telephones and data radios. In addition, because of its low loss, good isolation and inherent speed, the SW-358 can be used as a conventional T/R switch, or as an antenna diversity switch. Both switches can be used for power applications up to 2 watts in systems such as cellular, PCM, GSM, and other analog/digital wireless communication systems.

The SW-358 and SW-359A are fabricated with monolithic GaAs MMICs using a mature 1 micron process. The process features full passivation for increased performance and reliability.

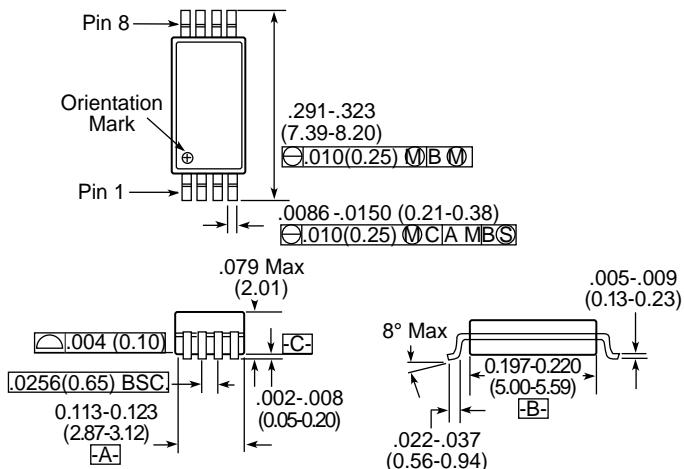

#### Electrical Specifications, T<sub>A</sub> = +25°C<sup>2</sup>

Parameter	Test Conditions	SW-358				SW-359A		
		Units	Min.	Typ.	Max.	Min.	Typ.	Max.

**Absolute Maximum Ratings<sup>1</sup>**

Parameter	Absolute Maximum
Max. Input Power (0.5 - 2.5GHz)	
3 V Control and Supply	+34dBm
5 V Control and Supply	+37dBm
9 V Control and Supply	+40dBm
Power Dissipation	1.0W
Operating Temperature	-40°C to +85°C
Storage Temperature	-65°C to +150°C
Thermal Resistance <sup>2</sup>	$\theta_{JC} = 87^\circ\text{C}/\text{W}$

Note: 1. Operation of this device above any one of these parameters may cause permanent damage.  
 2. Thermal resistance is given for  $T_A = +25^\circ\text{C}$ . Tcase is the temperature of leads 1 and 4.

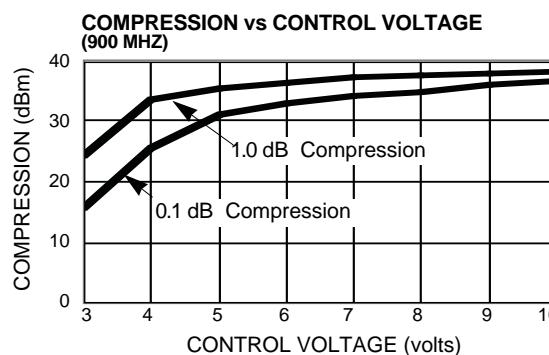

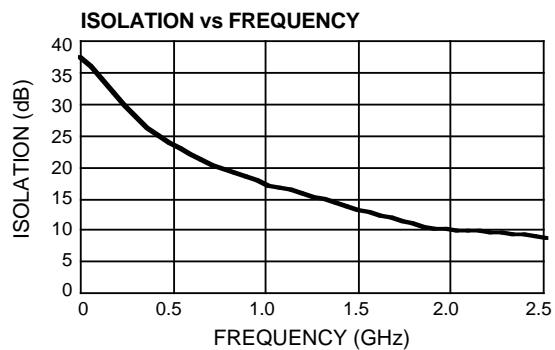

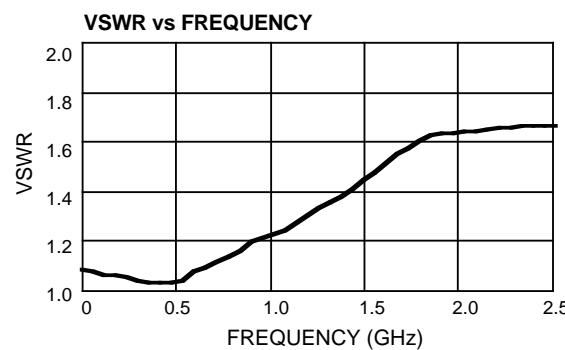

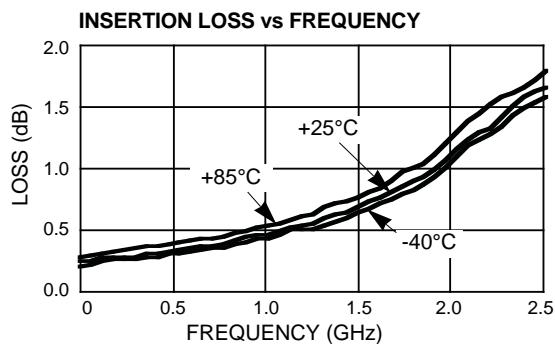

**Ordering Information**

Part Number	Package
SW-358 PIN	SSOP 8 Lead Plastic
SW-358TR	Forward Tape & Reel*
SW-358RTR	Reverse Tape & Reel*
SW-359A PIN	SSOP 8 Lead Plastic
SW-359ATR	Forward Tape & Reel*
SW-359ARTR	Reverse Tape & Reel*

\* If Specific reel size is required, consult factory for part number assignment.

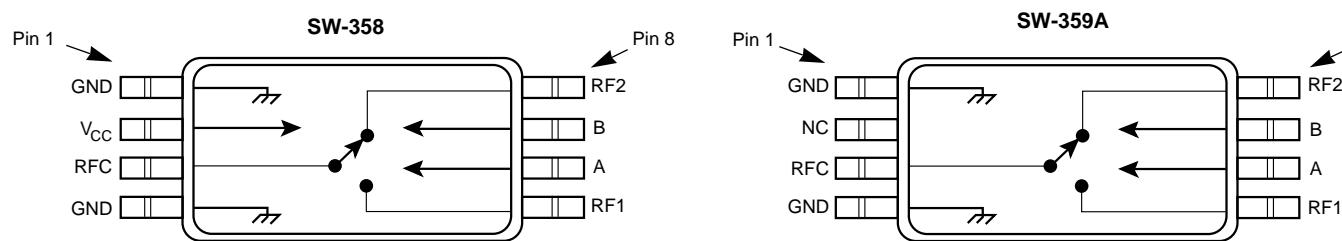

**Two Tone IP<sub>3</sub> Measurements**

Supply & Control Voltage	Input Power (dBm)	3rd Order Intermodulation Products (dBc)	IP <sub>3</sub> (dBm)	Second Harmonic (dBc)
0, 3 V	+27	-33	+43	-54

## Functional Schematics

## SW-358 Voltage Selection Truth Table

Mode	V <sub>CC</sub>	Control Input A	Control Input B	RFC - RF1	RFC - RF2
Positive Control and Supply <sup>1</sup>	+3 to +8.5 V	0 ±0.2 V V <sub>CC</sub> ±0.2 V	V <sub>CC</sub> ±0.2 V 0 ±0.2 V	On Off	Off On
Positive Supply and Positive/Negative Control <sup>1,2</sup>	+3 to +8.5 V	-V V <sub>CC</sub>	V <sub>CC</sub> -V	On Off	Off On
Negative Control <sup>3</sup>	0 V (GND)	0 ±0.2 V -3 V -8.5 V	-3 V to -8.5 V 0 ±0.2 V	Off On	On Off

Note: 1. External DC blocking capacitors are required on all RF ports.

2. | -V | +V ≤ 8.5 volts.

3. If negative control is used, DC blocking capacitors are not required on the RF ports.

## SW-359A Voltage Selection Truth Table

Mode	Control Input A	Control Input B	RFC - RF1	RFC - RF2
Positive Control <sup>1</sup>	0 ±0.2 V +3 to +8.5 V	+3 to +8.5 V 0 ±0.2 V	On Off	Off On
Positive/Negative Control <sup>1,2</sup>	-V +V	+V -V	On Off	Off On
Negative Control <sup>3</sup>	0 ±0.2 V -3 V to -8.5 V	-3 V to -8.5 V 0 ±0.2 V	Off On	On Off

Note: 1. External DC blocking capacitors are required on all RF ports.

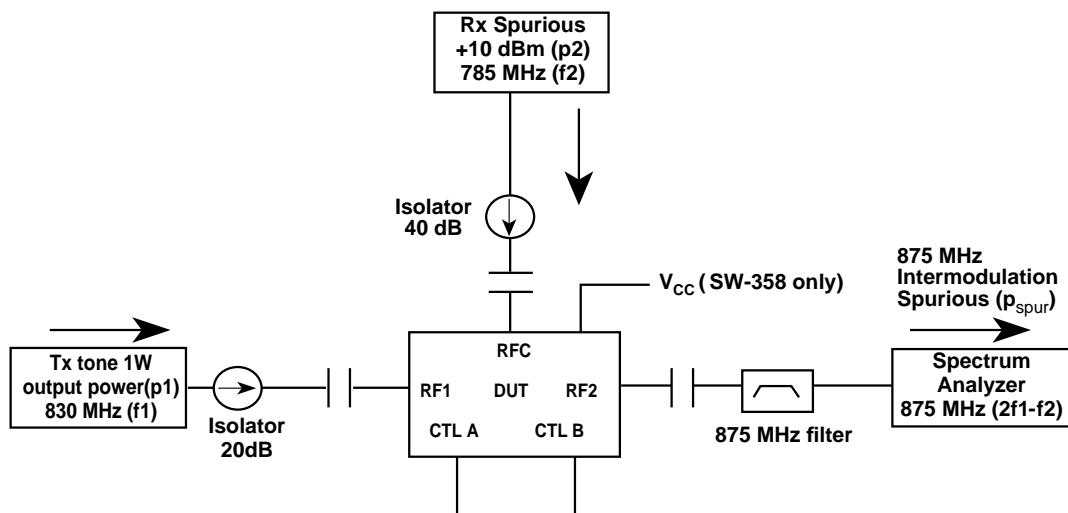

2. | -V | +V ≤ 8.5.

3. If negative control is used, DC blocking capacitors are not required on the RF ports.

## T/R Intermodulation Products Test Set-Up

This set-up tests the intermodulation product at the receiver frequency of 875 MHz generated by the intermodulation of the 1W Tx signal at 830 MHz (f1) and a Rx spurious at 785 MHz (f2). A +10 dBm spurious signal is used in order to overcome measurement sensitivity.

To calculate the intermodulation product, at the RF2 port, for a different Tx power level (p1) and a different Rx spurious level (p2),

use the following formula:

$$P_{spur} (@ RF2) = (2p1 + p2) - 148 \text{ dBm}$$

To calculate the intermodulation product, at the RF1 port, for a different Tx power level (p1) and a different Rx spurious level (p2), use the following formula:

$$P_{spur} (@ RF1) = (2p1 + p2) - 130 \text{ dBm}$$
