

S G S-THOMSON**30E D****FAST SWITCHING POWER TRANSISTOR**

- FAST SWITCHING TIMES
- LOW SWITCHING LOSSES
- VERY LOW SATURATION VOLTAGE AND HIGH GAIN FOR REDUCED LOAD OPERATION

**INTERNAL SCHEMATIC DIAGRAM****ABSOLUTE MAXIMUM RATINGS**

Symbol	Parameter	Value	Unit
V_{CEV}	Collector-emitter Voltage ($V_{BE} = -1.5V$)	160	V
V_{CEO}	Collector-emitter Voltage ($I_B = 0$)	90	V
V_{EBO}	Emitter-base Voltage ($I_C = 0$)	7	V
I_C	Collector Current	25	A
I_{CM}	Collector Peak Current	45	A
I_B	Base Current	6	A
I_{BM}	Base Peak Current	9	A
P_{base}	Reverse Bias Base Dissipation (B.E. junction in avalanche)	1	W
P_{tot}	Total Dissipation at $T_c < 25^\circ C$	120	W
T_{stg}	Storage Temperature	-65 to 200	°C
T_j	Max. Operating Junction Temperature	200	°C

SWITCHING OPERATING AND OVERLOAD AREAS

T-33-13

Transistor Forward Biased

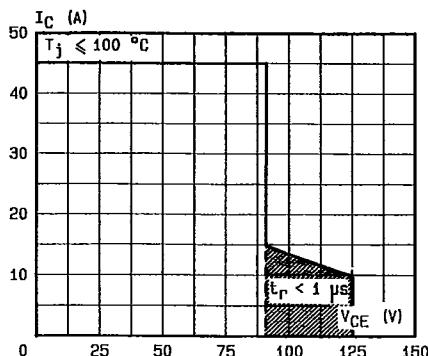

- During the turn-on
- During the turn-off without negative base-emitter voltage and $3.9\Omega \leq R_{BE} \leq 50\Omega$

Transistor Reverse Biased

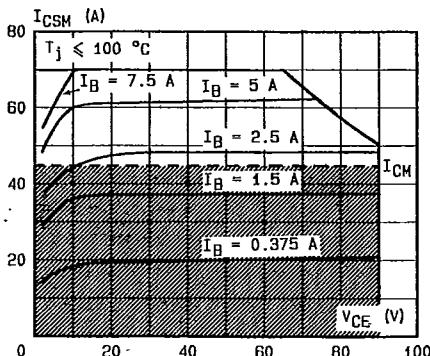

- During the turn-off with negative base emitter voltage

Forward Biased Safe Operating Area (FBSOA).

The hatched zone can only be used for turn-on

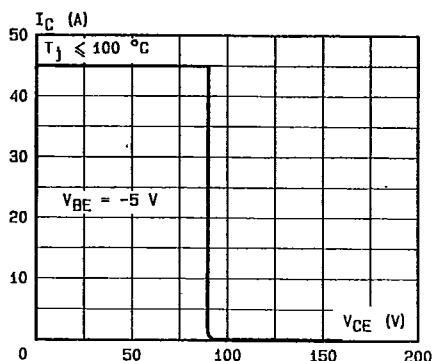

Forward Biased Accidental Overload Area (FBAOA).

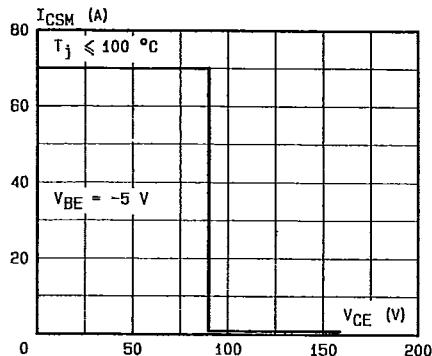

The Kellogg network (heavy point) allows the calculation of the maximum value of the short-circuit for a given base current I_B (90 % confidence).

High accidental surge currents (I_{CM}) are allowed if they are non repetitive and applied less than 3000 times during the component life.

Reverse Biased Safe Operating Area (RBSOA).

Reverse Biased Accidental Overload Area (RBAOA).

After the accidental overload current the RBAOA has to be used for the turn-off.
