Fact Finder on: WOODCRAFT VICES

THESE
LIGHTWEIGHT, LOW
COST,,
WOODWORKING
VICES ARE IDEAL
FOR THE MODEL
MAKER OR HOME
HANDYMAN YET
ROBUST ENOUGH
FOR THE
PROFESSIONAL
WHO NEEDS A
COMPACT, VICE FOR
SMALLER WORK.

Jaws are pre-
drilled for fitting
wooden cheeks
to protect
delicate work.

Steel
mainscrew
with a hard
wearing,
quick action,
rolled, 'Acme'
thread.

At rest, the jaws meet only
on the top edge, so that
when pressure is applied,
they give an even clamping
action over the whole
depth of the workpiece.

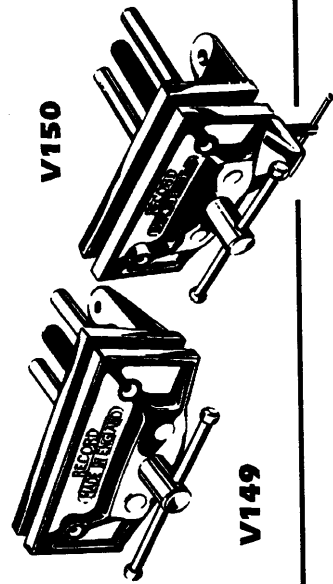

Two steel guide rods, accurately
made & fitted, reduce wear and
ensure a smooth, parallel action.

The body (1) and front plate (2)
are precision machined, high
grade, grey iron castings from our
own foundry.

'Fused' steel
handle will
bend before the
vice
can be
overstressed.

In addition to the 7" V175 shown above, this range also
includes two 6" vices: the V149 for permanent fitting
and the V150 which has an integral clamp so that it can
be carried around and fitted to any convenient working
surface.
