$MX \cdot CDM, INC.$

MX406*

PHASE LOCKED FILTER

FEATURES:

- 2nd Order Multiple Filter
- PLL Clock Generator
- Programmable Q
- Fc set by RC or External Clock
- Gain Adjustment on Inputs
- Low power CMOS Requirement

APPLICATIONS:

- Programmable Filters
- Voltage Controlled Filters
- Sinewave Oscillators
- Tracking Filters/Oscillators
- FSK and PSK Modems
- Square-Sine, Pulse-Sine Converters

MX406J (CDIP) MX406P (PDIP) 22 pins

DESCRIPTION:

The MX406 is a CMOS LSI circuit with a wide variety of signal processing applications. As depicted in Figure 1, the device consists of a 2nd order switched capacitor filter with a single input and separate bandpass, notch, lowpass, and highpass outputs. An on-chip clock generator provides the switched capacitor sampling clock frequency.

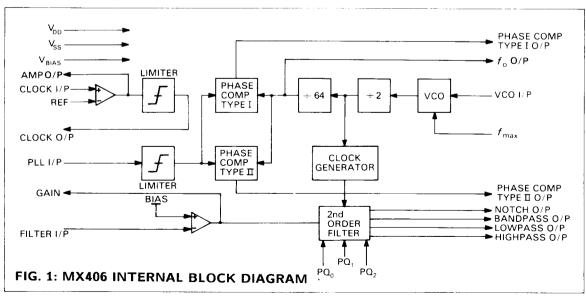

The center frequencies of the bandpass and notch filters are the same as the cut-off frequency f_c of the lowpass and highpass filters. The filter sampling clock is derived from a multiplying phase locked loop whose reference frequency is identical to the desired filter cut-off frequency.

The PLL is comprised of a voltage controlled oscillator, one of two types of phase comparator, a fixed divider, and an external RC loop filter. The filter cut-off frequency may be programmed by injecting an external signal into the PLL, or by using the on-chip oscillator circuit. The filters have input gain adjustment and the Q is programmable to eight values between 0.54 and 8.0.

MX406LH (24p PLCC)

*Application notes are included in Section 3 of this catalog.

MX406 PIN FUNCTION TABLE

PIN		FUNCTION/DESCRIPTION						
MX406J MX406P	MX406LH							
1	1	PCI O/P: Output of 'EXCLUSIVE-OR' type phase comparator. See Note on PLL operation.						
2	2	PLL I/P: Input to limiter preceding phase comparators.						
3	4	f _o O/P: Divided down VCO square wave output.						
4 5 6	5 6 7	PQ ₀ : PQ ₁ : PC ₂ : These pins set the Q of the filters; they have internal resistors to set Q = 0.71 if left open circuit. Possible Q values are:						
		PQo	PQ,	PQ ₂	Q			
		1	1	1	0.54*			
		0	1	1	0.58 (B	essell)		
		1	0	1	0.71 (B	sutterworth)		
		0	0	1	1.00			
		1	1	0	1.31			
		0 1	1 0	0 0	2.00 4.00			
		Ó	0	0	4.00 8.00			
			_	_		order Butterworth filter).		
7	8		Clock O/P: Digital output of clock oscillator circuit.					
8	10	Amp O/P: Analog output of clock oscillator amplifier.						
9	11	Reference: Inverting input to clock oscillator amplifier.						
10	12	Clock I/P: Non-inverting input to clock oscillator amplifier.						
11	13	VSS: Negative supply.						
12	14	V _{blas} : VDD/2 bias pin, externally decoupled.						
13	15	Filter I/P: Input to filter input buffer amplifier.						
14	16	Gain: Output of filter input buffer amplifier.						
15	17	Highpass O/P: Output of the highpass filter. The cut-off frequency is identical to the input frequency to the PLL when locked.						
16	18	Lowpass O/P: Output of the lowpass filter. The cut-off frequency is the same as the highpass filter.						
17	19	Bandpass O/P: Output of the bandpass filter. f_o is identical to the input frequency to the PLL when locked. Gain in passband is dependent on Q.						
18	20	Notch O/P: Output of the notch filter, fo, is the same as the bandpass filter.						
19	21	VCO I/P: Input of the VCO control voltage, usually connected to loop filter output.

MX406 PIN FUNCTION TABLE

PIN	FUNCTION/DESCRIPTION

MX406J MX406P	MX406LH	
20	22	\mathbf{f}_{Max} : This pin is connected to VSS via an external resistor. The value sets the maximum frequency of operation of the VCO.
21	23	PCII O/P: Output of the edge-triggered type of phase comparator. See note on PLL operation.
22	24	VDD: Positive supply.
-	3,9	No Connection: Leave open-circuit.

SPECIFICATIONS

ABSOLUTE MAXIMUM RATINGS

Exceeding the maximum rating can result in device damage. Operation of the device outside the operating limits is not suggested.

Supply Voltage -0.3 to 7.0 V Input Voltage at any pin

 $\begin{array}{ll} (\text{ref V}_{\text{ss}} = \text{OV}) & -0.3 \text{ V to V}_{\text{DD}} + 0.3 \text{ V} \\ \text{Sink/Source Current (Total)} & 20\text{mA} \\ \text{Maximum Device Dissipation} & 100\text{mW} \\ \text{Operating Temperature} & -30^{\circ}\text{C to +85}^{\circ}\text{C} \\ \end{array}$

Operating Temperature -30°C to +85°C Storage Temperature -55°C to +125°C

OPERATING LIMITS

All devices were measured under the following conditions unless otherwise noted.

 V_{DD} =5.0V T_{AMB} =25°C PLL input = 1kHz

Filter Q = 0.707

Characteristics See	Note Min.	Typ.	Max.	Unit
