CMOS Quad Bilateral Switch

For Transmission or Multiplexing of Analog or Digital Signals

RCA CD4066A is a quad bilateral switch intended for the transmission or multiplexing of analog or digital signals. It is pin-for-pin compatible with RCA-CD4016, but exhibits a much lower ON resistance. In addition, the ON resistance is relatively constant over the full input-signal range.

The CD4066A consists of four independent bilateral switches. A single control signal is required per switch. Both the p and the n device in a given switch are biased ON or OFF simultaneously by the control signal. As shown in Fig. 1, the well of the n-channel device on each switch is either tied to the input when the switch is ON or to V_{SS} when the switch is OFF. This configuration eliminates the variation of the switch-transistor threshold voltage with input signal, and thus keeps the ON resistance low over the full operating-signal range.

The advantages over single-channel switches include peak input-signal voltage swings equal to the full supply voltage, and more constant ON impedance over the input-signal range. For sample-and-hold applications, however, the CD4016 is recommended.

These types are supplied in 14-lead hermetic dual-in-line ceramic packages (D and F suffixes), 14-lead dual-in-line plastic package (E suffix), 14-lead ceramic flat package (K suffix), and in chip form (H suffix).

SPECIAL CONSIDERATIONS - CD4066A

- 1. In applications where separate power sources are used to drive V_{DD} and the signal inputs, the V_{DD} current capability should exceed V_{DD}/R_L (R_L = effective external load of the 4 CD4066A bilateral switches). This provision avoids any permanent current flow or clamp action on the V_{DD} supply when power is applied or removed from CD4066A.
- 2. In certain applications, the external load-resistor current may include both V_{DD} and signal-line components. To avoid drawing V_{DD} current when switch current flows into terminals 1, 4, 8, or 11, the voltage drop across the bidirectional switch must not exceed 0.8 volt (calculated from R_{ON} values shown).
- No V_{DD} current will flow through R_L if the switch current flows into terminals 2, 3, 9, or 10.
- 3. Minimum bilateral switch output load resistance is 100 Ω.

- Features:
- 15-V digital or ± 7.5-V peak-to-peak switching
 - 80Ω typical ON resistance for 15-V operation
 - Switch ON resistance matched to within 5 Ω over 15-V signal-input range
 - ON resistance flat over full peak-to-peak signal range
 - High ON/OFF output-voltage ratio: 65 dB typ. @ f_{is} = 10 kHz, R_L = 10 kΩ
 - High degree of linearity: < 0.5% distortion typ. @ f_{is} = 1 kHz, V_{is} = 5 V_{p-p}, V_{DD}-V_{SS} ≥ 10 V, R_L = 10 kΩ
 - Extremely low OFF switch leakage resulting in very low offset current and high effective OFF resistance: 10 pA typ. @ V_{DD}-V_{SS} = 10 V, T_A = 25°C
 - Extremely high control input impedance (control circuit isolated from signal circuit): 10¹² Ω typ.
 - Low crosstalk between switches: -50 dB typ. @ f_{is} = 0.9 MHz, R_L = 1 kΩ
 - Matched control-input to signal-output capacitance: Reduces output signal transients
 - Frequency response, switch ON = 40 MHz (typ.)
 - Quiescent current specified to 15-V
 - Maximum control input leakage current of 1-μA at 15-V (Full package-temperature range)

NOTES:

Refer to Rules for Dimensioning (JEDEC Publication No. 95) for Axial Lead Product Outlines.

1. When this device is supplied solder-dipped, the maximum lead thickness (narrow portion) will not exceed 0.013".
2. Leads within 0.005" (0.12 mm) radius of True Position (TP) at gauge plane with maximum material condition and unit installed.
3. e_A applies in zone L₂ when unit installed.
4. a applies to spread leads prior to installation.
5. N is the maximum quantity of lead positions.
6. N₁ is the quantity of allowable missing leads.

NOTES:

Refer to Rules for Dimensioning (JEDEC Publication No. 95) for Axial Lead Product Outlines.

- When this device is supplied solder dipped, the maximum lead thickness (narrow portion) will not exceed 0.013" (0.33 mm).
- Leads within 0.005" (0.12 mm) radius of True Position (TP) at gauge plane with maximum material condition and unit installed.
- e_1 applies in zone L₂ when unit installed.
- a applies to spread leads prior to installation.
- N is the maximum quantity of lead positions.
- N_1 is the quantity of allowable missing leads.
