DESCRIPTION

The LD 1103 series has a colorless case with rectangular, luminous area and diffuser layer. Two chips (GaP-green and TSN-red) enable the use as optical indicator with two functions.

Because of its very low current consumption and hence low inherent heating as well as high vibration resistance and long service life, this LED is suitable for applications where signal-lamps are not or only inadequately useful. Moreover, the LED can be driven by TTL ICs.
