

**MOTOROLA**

Dual D Type Master-Slave Flip-Flop

**ELECTRICALLY TESTED PER:
5962-8756101**

The 10H531 is a MECL 10H part which is a functional/pinout duplication of the standard MECL 10K family part, with 100% improvement in propagation delay, and no increase in power-supply current.

- Propagation Delay, ± 0.1 ns Typical
- 340 mW Max/Pkg (No Load)
- Improved Noise Margin 150 mV (Over Operating Voltage and Temperature Range)
- Voltage Compensated
- MECL 10K-Compatible

PIN ASSIGNMENTS

FUNCTION	DIL	FLATS	LCC	BURN-IN (CONDITION C)

Note: Do not remove power during sequence of tests.

Figure 3. Timing Diagram

NOTES

1. **t_{hold}** is min. time after positive transition of the clock pulse that information must remain unchanged at the data input.
2. For all **t_{hold}** tests, pulse width should not be less than 20 ns.

NOTES

1. t_{setup} is the min. time before the positive transition of the clock information must be present at the data input.
2. For all setup tests, pulse widths should not be less than 20 ns.

Data precedes clock by ≤ 1.5 ns (setup)

10H531 QUIESCENT LIMIT TABLE *

* ELECTRICAL CHARACTERISTICS

Each MECL 10H series circuit has been designed to meet the dc specifications shown in the test table, after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse air flow greater than 500 linear fpm is maintained. Outputs are terminated through a 100 Ω resistor to -2.0 volts.
