

FCX – A SERIES LEVEL TRANSMITTER

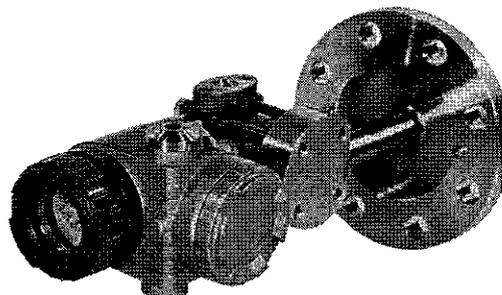

DATA SHEET

FHE, FKE...2

The FCX –A level transmitter accurately measures liquid level and transmits a proportional 4 to 20mA signal. The transmitter utilizes a unique micromachined capacitive silicon sensor with state-of-the-art microprocessor technology to provide exceptional performance and functionality.

FEATURES

- High accuracy**
0.2% accuracy for all calibrated spans is a standard feature for all models covering 3.2kPa(32mbar) range to 500kPa(5bar) high differential. Fuji's micro-capacitance silicon sensor assures this accuracy for all elevated or suppressed calibration ranges without additional adjustment.
- Minimum environmental influence**
The "Advanced Floating Cell" design which protects the pressure sensor against changes in temperature, static pressure, and overpressure substantially reduces total measurement error in actual field applications.
- Smart / Traditional convertible**
Fuji micro-electronics manufacturing technology offers free selection of Smart / Traditional transmitters. A small plug-in communication module upgrades your model FHE to smart type model FKE, which has full remote communication capabilities. A Hand Held Communicator (HHC), model FXW can remotely display or reconfigure all transmitter parameters at any point on the loop without affecting the transmitter signal.
- Fuji/HART bilingual communication module**
The communication module is "bilingual" to speak both Fuji proprietary protocol and HART. Any HART compatible devices can communicate with FCX-A/C series transmitters.
- Application flexibility**
Example options that render the FCX –A suitable for almost any process applications includes:
 - Analog indicator at either the electronics side or terminal side
 - Full range of hazardous area approvals
 - Built-in RFI filter and lightning arrestor
 - 4 $\frac{1}{2}$ -digits LCD meter
 - Stainless steel electronics housing
 - Wide selection of materials
 - High temperature, high vacuum service.
