

HDSP-390x Series

20 mm (0.8 inch) Seven Segment Displays

Data Sheet

- HDSP-390x Series
- HDSP-420x Series
- HDSP-860x Series
- HDSP-N15x Series

Description

The 20 mm (0.8 inch) LED seven segment displays are designed for viewing distances up to 10 metres (33 feet). These devices use an industry standard size package and pinout. All devices are available as either common anode or common cathode.

Applications

These displays are ideal for most applications. Pin for pin equivalent displays are also available in a low current design. The low current displays are ideal for portable applications. For additional information see the Low Current Seven Segment Displays data sheet.

Features

- Industry standard size
- Industry standard pinout
15.24 mm (0.6 in.) DIP leads on 2.54 mm (0.1 in.) centers
- Choice of Colors
AlGaAs Red, High Efficiency Red, Yellow, Green
- Excellent appearance
Evenly lighted segments
Mitered corners on segments
Gray package gives optimum contrast
 $\pm 50^\circ$ viewing angle
- Design flexibility
Common anode or common cathode
Left and right hand decimal points
 ± 1 . overflow character
- Categorized for luminous intensity
Yellow and green categorized for color
Use of like categories yields a uniform display
- High light output
- High peak current
- Excellent for long digit string multiplexing intensity and color selection option
See Intensity and Color Selected Displays Data Sheet
- Sunlight viewable AlGaAs

Notes:

1. These displays are recommended for high ambient light operation. Please refer to the HDSP-N10x AlGaAs data sheet for low current operation.
2. Universal pinout brings the anode and cathode of each segment's LED out to separate pins. See internal diagram E.

Notes:

1. For codes not listed in the figure above, please refer to the respective datasheet or contact your nearest Avago representative for details.
2. Bin options refer to shippable bins for a part number. Color and Intensity Bins are typically restricted to 1 bin per tube (exceptions may apply). Please refer to respective datasheet for specific bin limit information.

Notes:

- Case temperature of the device immediately prior to the intensity measurement is 25°C.
- The digits are categorized for luminous intensity. The intensity category is designated by a letter on the side of the package.
- The dominant wavelength, λ_d , is derived from the CIE chromaticity diagram and is that single wavelength which defines the color of the device.
- Typical specification for reference only. Do not exceed absolute maximum ratings.
- For low current operation, the AlGaAs Red HDSP-N100 series displays are recommended. They are tested at 1 mA dc/segment and are pin for pin compatible with the HDSP-N150 series.
- The Yellow (HDSP-420x) and Green (HDSP-860x) displays are categorized for dominant wavelength. The category is designated by a number adjacent to the luminous intensity category letter.

Contrast Enhancement

For information on contrast enhancement, please see Application Note 1015.

Soldering/Cleaning

Cleaning agents from the ketone family (acetone, methyl ethyl ketone, etc.) and from the chlorinated hydrocarbon family (methylene chloride, trichloro-ethylene, carbon tetrachloride, etc.) are not recommended for cleaning LED parts. All of these various solvents attack or dissolve the encapsulating epoxies used to form the package of plastic LED parts.

For information on soldering LEDs, please refer to Application Note 1027.
