DESCRIPTION

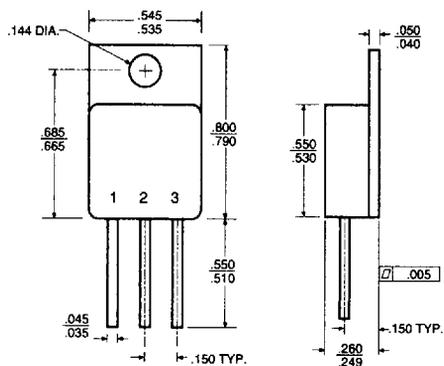

These three (3) terminal positive regulators are supplied in a hermetically sealed TO-254 metal package. All protective features are designed into the circuit, including thermal shutdown, current limiting and safe-area control. These units are internally compensated, thus improving stability and transient response of the regulator. External capacitors are not required in most applications. These units are highly desirable for use in a high density design where space is a major consideration. Standard voltages are 5V, 12V, and 15V. These units are trimmed to 1% of nominal voltage.
