

## FEATURES

- Low Offset Voltage ..... 150 $\mu$ V Max
- Low Offset Voltage Drift ..... 2.5 $\mu$ V/ $^{\circ}$ C Max
- Load Current Capability ..... 5mA Min
- Internal Frequency Compensation
- 125 $^{\circ}$ C Temperature Tested Die
- Low Offset Current ..... 200pA Max
- Low Bias Current ..... 2.0nA Max
- Low Power Consumption ..... 18mW Max @  $\pm$ 15V
- High Common-Mode Input Range .....  $\pm$ 13V Min
- MIL-STD-883 Class B Processing Available
- Silicon-Nitride Passivation
- Available in Die Form

## GENERAL DESCRIPTION

The PMI OP-12 is an improved version of the popular LM108A low-power op amp. The OP-12 is internally compensated and its chip dimensions are only 42 X 58 mils. Offset voltage is lower; the total worst-case input offset voltage over -55 $^{\circ}$ C to +125 $^{\circ}$ C for the OP-12A is only 350 $\mu$ V. In addition, the OP-12 drives a 2k $\Omega$  load which is five times the output current capability of the 108A. This excellent performance is achieved by applying PMI's ion-implanted super-beta process and on-chip zener-zap trimming capabilities. The internal compensation makes this op amp ideal for hybrid assembly applications.

8-Pin Hermetic DIP (Z)	162	26	°C/W

### NOTES:

1. The inputs are shunted with back-to-back diodes for overvoltage protection. Therefore, excessive current will flow if a differential input voltage in excess of 1V is applied between the inputs unless some limiting resistance is provided.
2. For supply voltages less than -15V, the absolute maximum input voltage is equal to the supply voltage.
3.  $\Theta_{JA}$  is specified for worst case mounting conditions, i.e.,  $\Theta_{JA}$  is specified for device in socket for TO and CerDIP packages.
4. Absolute maximum ratings apply to both DICE and packaged parts, unless otherwise noted.

**NOTES:**

1. Guaranteed by design.

2. For  $25^\circ C$  specifications of OP-12NT and OP-12GT, see OP-12N and OP-12G, respectively.

Electrical tests are performed at wafer probe to the limits shown. Due to variations in assembly methods and normal yield loss, yield after packaging is not guaranteed for standard product dice. Consult factory to negotiate specifications based on dice lot qualification through sample lot assembly and testing.
