Relative humidity : 63% to 67%

Air pressure : 86 to 106 kPa

#### **Operating temperature range:**

The operating temperature range is the range of ambient temperatures at which the quartz crystal oscillator can be stored without damage. Conditions are as specified elsewhere on these specifications.

Operating temperature range: -10°C to +60°C

#### **Storage temperature range:**

The storage temperature range is the range of ambient temperatures at which the quartz crystal oscillator can be stored without damage. Conditions are as specified elsewhere on these specifications.

### 3.2 Environmental characteristics

Provided that measurement shall be carried out after letting it alone in the room temperature for 1h.

Item		Specifications
1	Humidity	It alone at $40^{\circ}\text{C} \pm 2^{\circ}\text{C}$ in humidity of 90~95% for 48h.
2	Storage in Low Temperature	It alone at $-40^{\circ}\text{C} \pm 2^{\circ}\text{C}$ for 240h.
3	Storage in High Temperature	It alone at $85^{\circ}\text{C} \pm 2^{\circ}\text{C}$ for 240h.
4	Temperature Cycle	The following temperature cycle (10 cycles). Refer to below Fig. Temperature shift from low to high, high to low shall be done in $1^{\circ}\text{C}/\text{min}$ .

\*Frequency variation shall be within  $\pm 5\text{ppm}$  and equivalent resistance less than  $\pm 15\%$  max. after the test.

Note: Measuring the frequency should be done after keeping test samples at room temperature for 24 hours.

### 3.3 SUGGESTED IR REFLOW PROFILE

#### 4. PACKING

1. 230mm minimum leafer which consist of carrier and tape followed by a minimum of 160mm of empty carrier tape sealed with cover tape.
2. 160mm minimum trailer of empty carrier tape sealed with cover tape.

### 5. Note

1. Only the lead should be heated when soldering.  
 In case that the package temperature is exceeding 150°C , it may impair the crystal or may cause the crystal quartz to destroy.
2. Pulling the lead strongly may cause cracking of the hermetic glass seal bending the lead closely from the case may also cause same problem, so when the lead needs to be bent, please leave more than 0.5mm of lead from the case.
3. Too much shock or vibration is not allowed. According to conditions such as machine shock during the assembly, the internal quartz crystal might be damaged.  
 Please check your conditions carefully when using it in advance.
4. Don't storage or use in the environment that temperature may change rapidly to avoid the condensation. And also we recommend to storage the products in the normal environment. (Temperature, humidity)
5. This product can be subjected to ultrasonic cleaning. However, since the oscillator may be affected depending on the condition, be sure to check it.
6. Applying excessive drive level to the quartz crystal may cause deterioration for characteristics or damage.  
 Circuit design must be such as to maintain a proper drive level.
7. Unless adequate negative resistance is allocated in the oscillation circuit, startup time of

oscillation may be increased or no oscillation may occur. In order to avoid this, provide enough negative resistance in the circuitry design.
