CMOS

2 M (256 K × 8/128 K × 16) BIT

MBM29F200TA-90-X/-12-X/MBM29F200BA-90-X/-12-X

■ FEATURES

- **Single 5.0 V read, program, and erase**
Minimizes system level power requirements
- **Compatible with JEDEC-standard commands**
Uses same software commands as E²PROMs
- **Compatible with JEDEC-standard world-wide pinouts**
44-pin SOP (Package suffix: PF)
48-pin TSOP (I) (Package suffix: PFTN – Normal Bend Type, PFTR – Reversed Bend Type)
- **Minimum 100,000 write/erase cycles**
- **High performance**
90 ns maximum access time
- **Sector erase architecture**
One 16K byte, two 8K bytes, one 32K byte, and three 64K bytes.
Any combination of sectors can be concurrently erased. Also supports full chip erase.
- **Boot Code Sector Architecture**
TA = Top sector
BA = Bottom sector
- **Embedded Erase™ Algorithms**
Automatically pre-programmes and erases the chip or any sector
- **Embedded Program™ Algorithms**
Automatically writes and verifies data at specified address
- **Data Polling and Toggle Bit feature for detection of program or erase cycle completion**
- **Ready/Busy output (RY/BY)**
Hardware method for detection of program or erase cycle completion.
- **Low V_{cc} write inhibit ≤ 3.2 V**
- **Hardware RESET pin**
Resets internal state machine to the read mode.
- **Sector protection**
Hardware method disables any combination of sectors from write or erase operations
- **Temporary sector groups unprotection**
Hardware method temporarily enables any combination of sectors from write or erase operations

(Continued)

MBM29F200TA-90-X/-12-X/MBM29F200BA-90-X/-12-X

(Continued)

- **Erase Suspend/Resume**

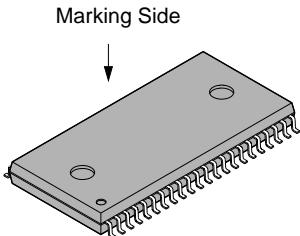

Suspends the erase operation to allow a read data in another sector within the same device

- **Extended Operating temperature range: -40°C to +85°C**

Please refer to “MBM29F200TA/MBM29F200BA” in detailed specifications.

■ GENERAL DESCRIPTION

The MBM29F200TA-X/BA-X is a 2M-bit, 5.0 V-only Flash memory organized as 256K bytes of 8 bits each or 128K words of 16 bits each. The MBM29F200TA-X/BA-X is offered in a 44-pin SOP and 48-pin TSOP (I) packages. This device is designed to be programmed in-system with the standard system 5.0 V V_{CC} supply. A 12.0 V V_{PP} is not required for write or erase operations. The device can also be reprogrammed in standard EPROM programmers.

The MBM29F200TA-X/BA-X offers access times 90 ns and 120 ns, allowing operation of high-speed microprocessors without wait states. To eliminate bus contention the device has separate chip enable (\overline{CE}), write enable (\overline{WE}), and output enable (\overline{OE}) controls.

The MBM29F200TA-X/BA-X is pin and command set compatible with JEDEC standard E²PROMs. Commands are written to the command register using standard microprocessor write timings. Register contents serve as input to an internal state-machine which controls the erase and programming circuitry. Write cycles also internally latch addresses and data needed for the programming and erase operations. Reading data out of the device is similar to reading from 12.0 V Flash or EPROM devices.

The MBM29F200TA-X/BA-X is programmed by executing the program command sequence. This will invoke the Embedded Program Algorithm which is an internal algorithm that automatically times the program pulse widths and verifies proper cell margin. Typically, each sector can be programmed and verified in about 0.5 seconds. Erase is accomplished by executing the erase command sequence. This will invoke the Embedded Erase Algorithm which is an internal algorithm that automatically preprograms the array if it is not already programmed before executing the erase operation. During erase, the device automatically times the erase pulse widths and verifies proper cell margin.

A sector is typically erased and verified in 1.0 second (if already completely preprogrammed.)

The device also features a sector erase architecture. The sector mode allows each sector to be erased and reprogrammed without affecting other sectors. The MBM29F200TA-X/BA-X is erased when shipped from the factory.

The device features single 5.0 V power supply operation for both read and write functions. Internally generated and regulated voltages are provided for the program and erase operations. A low V_{CC} detector automatically inhibits write operations on the loss of power. The end of program or erase is detected by \overline{Data} Polling of DQ₇, by the Toggle Bit feature on DQ₆, or the RY/BY pin. Once the end of a program or erase cycle has been completed, the device internally resets to the read mode.

Fujitsu's Flash technology combines years of EPROM and E²PROM experience to produce the highest levels of quality, reliability and cost effectiveness. The MBM29F200TA-X/BA-X memory electrically erases the entire chip or all bits within a sector simultaneously via Fowler-Nordhiem tunneling. The bytes/words are programmed one byte/word at a time using the EPROM programming mechanism of hot electron injection.

MBM29F200TA-90-X/-12-X/MBM29F200BA-90-X/-12-X

■ FLEXIBLE SECTOR-ERASE ARCHITECTURE

- One 16K byte, two 8K bytes, one 32K byte, and three 64K bytes
- Individual-sector, multiple-sector, or bulk-erase capability
- Individual or multiple-sector protection is user definable.

	(× 8)	(× 16)		(× 8)	(× 16)
16K byte	3FFFFH	1FFFFH	64K byte	3FFFFH	1FFFFH
8K byte	3BFFFH	1DFFFH	64K byte	2FFFFH	17FFFH
8K byte	39FFFH	1CFFFH	64K byte	1FFFFH	0FFFFH

■ ORDERING INFORMATION

Industrial Devices

Fujitsu industrial devices are available in several packages. The order number is formed by a combination of:

MBM29F200TA-90-X/-12-X/MBM29F200BA-90-X/-12-X

■ ABSOLUTE MAXIMUM RATINGS

Storage Temperature	-55°C to +125°C
Ambient Temperature with Power Applied.....	-40°C to +85°C
Voltage with Respect to Ground All pins except A ₉ , \overline{OE} , \overline{RESET} (Note 1).....	-2.0 V to +7.0 V
V _{CC} (Note 1)	-2.0 V to +7.0 V
A ₉ , \overline{OE} , \overline{RESET} (Note 2)	-2.0 V to +13.5 V

- Notes:**
1. Minimum DC voltage on input or I/O pins is -0.5 V. During voltage transitions, inputs may negative overshoot V_{SS} to -2.0 V for periods of up to 20 ns. Maximum DC voltage on output and I/O pins is V_{CC} +0.5 V. During voltage transitions, outputs may positive overshoot to V_{CC} +2.0 V for periods of up to 20 ns.
 2. Minimum DC input voltage on A₉, \overline{OE} , \overline{RESET} pins are -0.5 V. During voltage transitions, A₉, \overline{OE} , \overline{RESET} pins may negative overshoot V_{SS} to -2.0 V for periods of up to 20 ns. Maximum DC input voltage on A₉, \overline{OE} , \overline{RESET} pins are +13.0 V which may positive overshoot to 13.5 V for periods of up to 20 ns.

WARNING: Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure of the device to absolute maximum rating conditions for extended periods may affect device reliability.

■ RECOMMENDED OPERATING RANGES

Industrial Devices

Ambient Temperature (T _A)	-40°C to +85°C
V _{CC} Supply Voltages	+4.50 V to +5.50 V

Recommended operating ranges define those limits between which the functionality of the device is guaranteed.

MBM29F200TA-90-X/-12-X/MBM29F200BA-90-X/-12-X
