CMOS

# F<sup>2</sup>MC-8L MB89670R/670AR Series

## MB89673R/673AR/675R/675AR MB89677AR/P677A/PV670A

### ■ OUTLINE

The MB89670R/670AR series has been developed as a line of proprietary 8-bit, single-chip microcontrollers.

In addition to the F<sup>2</sup>MC\*-8L family CPU core which can operate at low voltage but at high speed, the microcontrollers contain peripheral functions such as timers, a serial interface, a 10-bit A/D converter, a UART, an 8/16-bit up/down counter/timer, and an external interrupt.

The MB89670R/670AR series is applicable to a wide range of applications from consumer appliances to industrial equipment, including portable devices.

\*: F<sup>2</sup>MC stands for FUJITSU Flexible Microcontroller.

### ■ FEATURES

- F<sup>2</sup>MC-8L family CPU core

Instruction set optimized for controllers

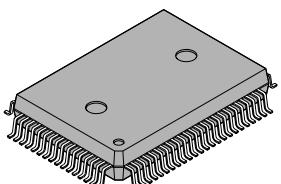

{ Multiplication and division instructions  
16-bit arithmetic operations  
Test and branch instructions  
Bit manipulation instructions, etc.

- High-speed processing at low voltage
- Minimum execution time: 0.4 µs@3.5 V, 0.8 µs@2.7 V, 2.0 µs@2.2 V
- I/O ports: max. 69 channels

(Continued)

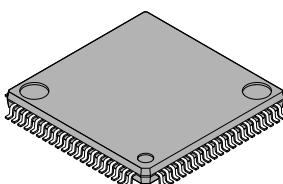

### ■ PACKAGE

80-pin Plastic QFP

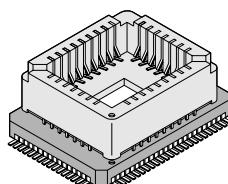

(FPT-80P-M06)

80-pin Plastic LQFP

(FPT-80P-M11)

80-pin Ceramic MQFP

(MQP-80C-P01)

# MB89670R/670AR Series

(Continued)

- Timers: 9 channels (MB89675AR/677AR/P677A/PV670A: 12 channels)  
8-bit PWM timer: 3 channels (MB89675AR/677AR/P677A/PV670A: 6 channels) (also usable as a reload timer or 8-bit PWM timer)  
16-bit timer/counter  
21-bit timebase timer  
8/16-bit timer (8 bits × 2 channels or 16 bits)  
8/16-bit up/down counter/timer (8 bits × 2 channels or 16 bits)
- 2-channel serial interfaces  
8-bit synchronized serial: 1 channel (Switchable transfer direction allows communication with various equipment.)  
UART: 1 channel (internal full-duplex double buffer)
- External interrupts: 8 channels  
Eight channels are independent and capable of wake-up from low-power consumption modes (with an edge detection function).
- Buzzer output
- 10-bit A/D converter  
Input: 8 channels
- Low-power consumption modes  
Stop mode (Oscillation stops to minimize the current consumption.)  
Sleep mode (The CPU stops to reduce the current consumption to approx. 1/3 of normal.)
- Bus interface function  
Including hold and ready functions

# MB89670R/670AR Series

## ■ PRODUCT LINEUP

Part number Item	MB89673R <sup>*1</sup>	MB89673AR	MB89675R <sup>*1</sup>	MB89675AR	MB89677AR	MB89P677A	MB89PV670A			
Classification	Mass-produced products (mask ROM products)				One-time PROM product (for development)	Piggyback/ evaluation product (for development)				
ROM size	8 K × 8 bits (internal mask ROM)		16 K × 8 bits (internal mask ROM)		32 K × 8 bits (internal mask ROM)		48 K × 8 bits (external ROM)			
RAM size	384 × 8 bits		512 × 8 bits		1 K × 8 bits					
CPU functions	The number of instructions: Instruction bit length: Instruction length: Data bit length: Minimum execution time: Interrupt processing time:		136 8 bits 1 to 3 bytes 1, 8, 16 bits 0.4 µs@10 MHz to 6.4 µs@10 MHz 3.6 µs@10 MHz to 57.6 µs@10 MHz							
Ports	Output ports (N-channel open-drain): Output ports (CMOS): I/O ports (N-channel open-drain): I/O ports (CMOS): Input ports: Total:		14 (12 also serve as peripherals.) 8 (All also serve as peripherals.) 7 (All also serve as peripherals.) 32 (All also serve as peripherals.) 8 (All also serve as peripherals.) 69							
Option	Specify when ordering masking				Set with EPROM programmer	Setting not possible				
Timebase timer	21 bits (0.81 ms, 3.27 ms, 26.21 ms, 419 ms@10 MHz)									
8/16-bit up/down counter/timer	8 bits × 2 channels or 16 bits × 1 channel Timer operation Up/down counter operation Phase difference counting (double mode, quadruple mode)									
16-bit timer/counter	16-bit timer operation 16-bit event counter operation (edge selectable)									
8/16-bit timer/counter	8 bits × 2 channels or 16 bits × 1 channel Reload timer operation (toggled output capable) Event counter operation									
8-bit PWM timer 1, 2	8 bits × 2 channels reload timer operation (toggled output capable) 8 bits × 2 channels PWM operation (four frequencies fixed) 8 bits × 1 channel PPG operation (variable frequency) Capable of output switching between 2 channels in any mode									
8-bit PWM timer 3, 4, 5, 6	8-bit reload timer operation (toggled output capable) 8-bit PWM operation (four frequencies fixed) Capable of output switching between 2 channels in any mode									
8-bit serial I/O	8 bits LSB first/MSB first selectable One clock selectable from four transfer clocks (one external shift clock, three internal shift clocks)

## ■ DIFFERENCES AMONG PRODUCTS

### 1. Memory Size

Before evaluating using the piggyback product, make sure of its differences from the product that will actually be used. Take particular care on the following points:

- On the MB89P677A, the program area starts from address  $8007_{\text{H}}$ , while on the MB89677AR and MB89PV670A starts from  $8000_{\text{H}}$ .  
(On the MB89P677A, the option setting data can be read by reading the addresses " $8000_{\text{H}}$ " to " $8006_{\text{H}}$ ", while on the MB89677AR and MB89PV670A, addresses  $8000_{\text{H}}$  to  $8006_{\text{H}}$  could also be used as a program ROM. However, do not use these addresses in order to maintain compatibility of the MB89P677A.)
- The stack area, etc., is set at the upper limit of the RAM.
- The external area is used.

### 2. Current Consumption

- In the case of the MB89PV670A, add the current consumed by the EPROM which is connected to the top socket.
- When operated at low speed, the product with an OTPROM (one-time PROM) or an EPROM will consume more current than the product with a mask ROM.

However, the current consumption in sleep/stop modes is the same. (For more information, see sections "■ Electrical Characteristics" and "■ Example Characteristics.")

### 3. Mask Options

Functions that can be selected as options and how to designate these options vary by the product.

Before using options check section "■ Mask Options."

Take particular care on the following point:

- Options are fixed on the MB89PV670A.

### 4. Differences between the MB89670/670A and MB89670R/670AR Series

- Memory access area

Memory access area of both the MB89677A and MB89677AR is the same.

The access area of the MB89673 is different from that of the MB89673R and MB89673AR respectively in the external bus mode. See below.

Address	Memory area	
	MB89673	MB89673R/673AR
$0000_{\text{H}}$ to $007F_{\text{H}}$	I/O area	I/O area
$0080_{\text{H}}$ to $01FF_{\text{H}}$	RAM area	RAM area
$0200_{\text{H}}$ to $027F_{\text{H}}$		Access prohibited
$0280_{\text{H}}$ to $BFFF_{\text{H}}$	External area	External area
$C000_{\text{H}}$ to $DFFF_{\text{H}}$		Access prohibited
$E000_{\text{H}}$ to $FFFF_{\text{H}}$	ROM area	ROM area

# MB89670R/670AR Series

- Electrical specifications/characteristics  
Electrical specifications/characteristics of the MB89673R/673AR/677AR are the same with that of the MB89670/670A series.
- The other specifications  
Both the MB89673R/673AR/677AR and the MB89670/670A series are the same.

## ■ CORRESPONDENCE BETWEEN THE MB89670/670A SERIES AND MB89670R/670AR SERIES

- The MB89670R/670AR series is the reduction version of the MB89670/670A series.
- The MB89670/670A and MB89670R/670AR series consist of the following products:

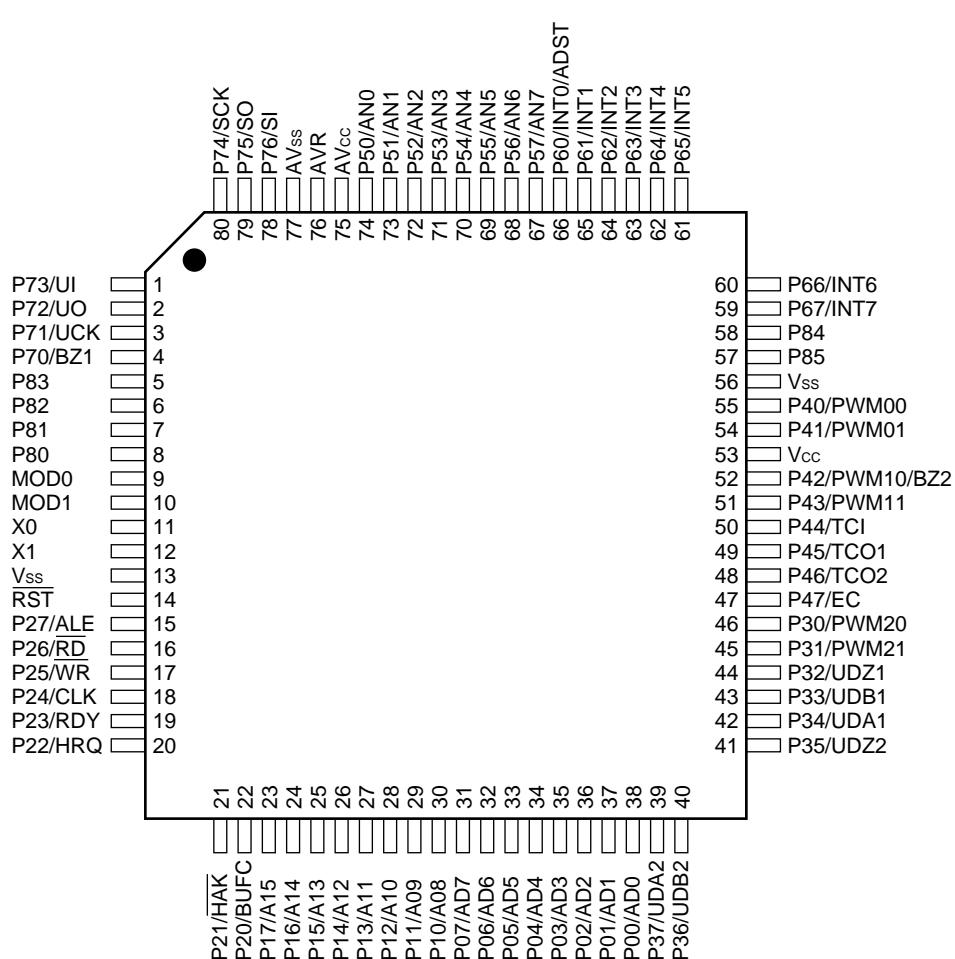

MB89670/ 670A series	MB89673	—	—	—	MB89677A	MB89P677A	MB89PV670A
MB89670R/ 670AR series	MB89673R	MB89673AR	MB89675R	MB89675AR	MB89677AR		

- Differences between the MB89670A/670AR series and MB89670/670R series  
8-bit PWM timer 4, 5, and 6 is not provided for the MB89670/670R series.  
See the table below for the provided 8-bit PWM timer and the corresponding pin for the MB89670A/670AR series and MB89670/670R series.

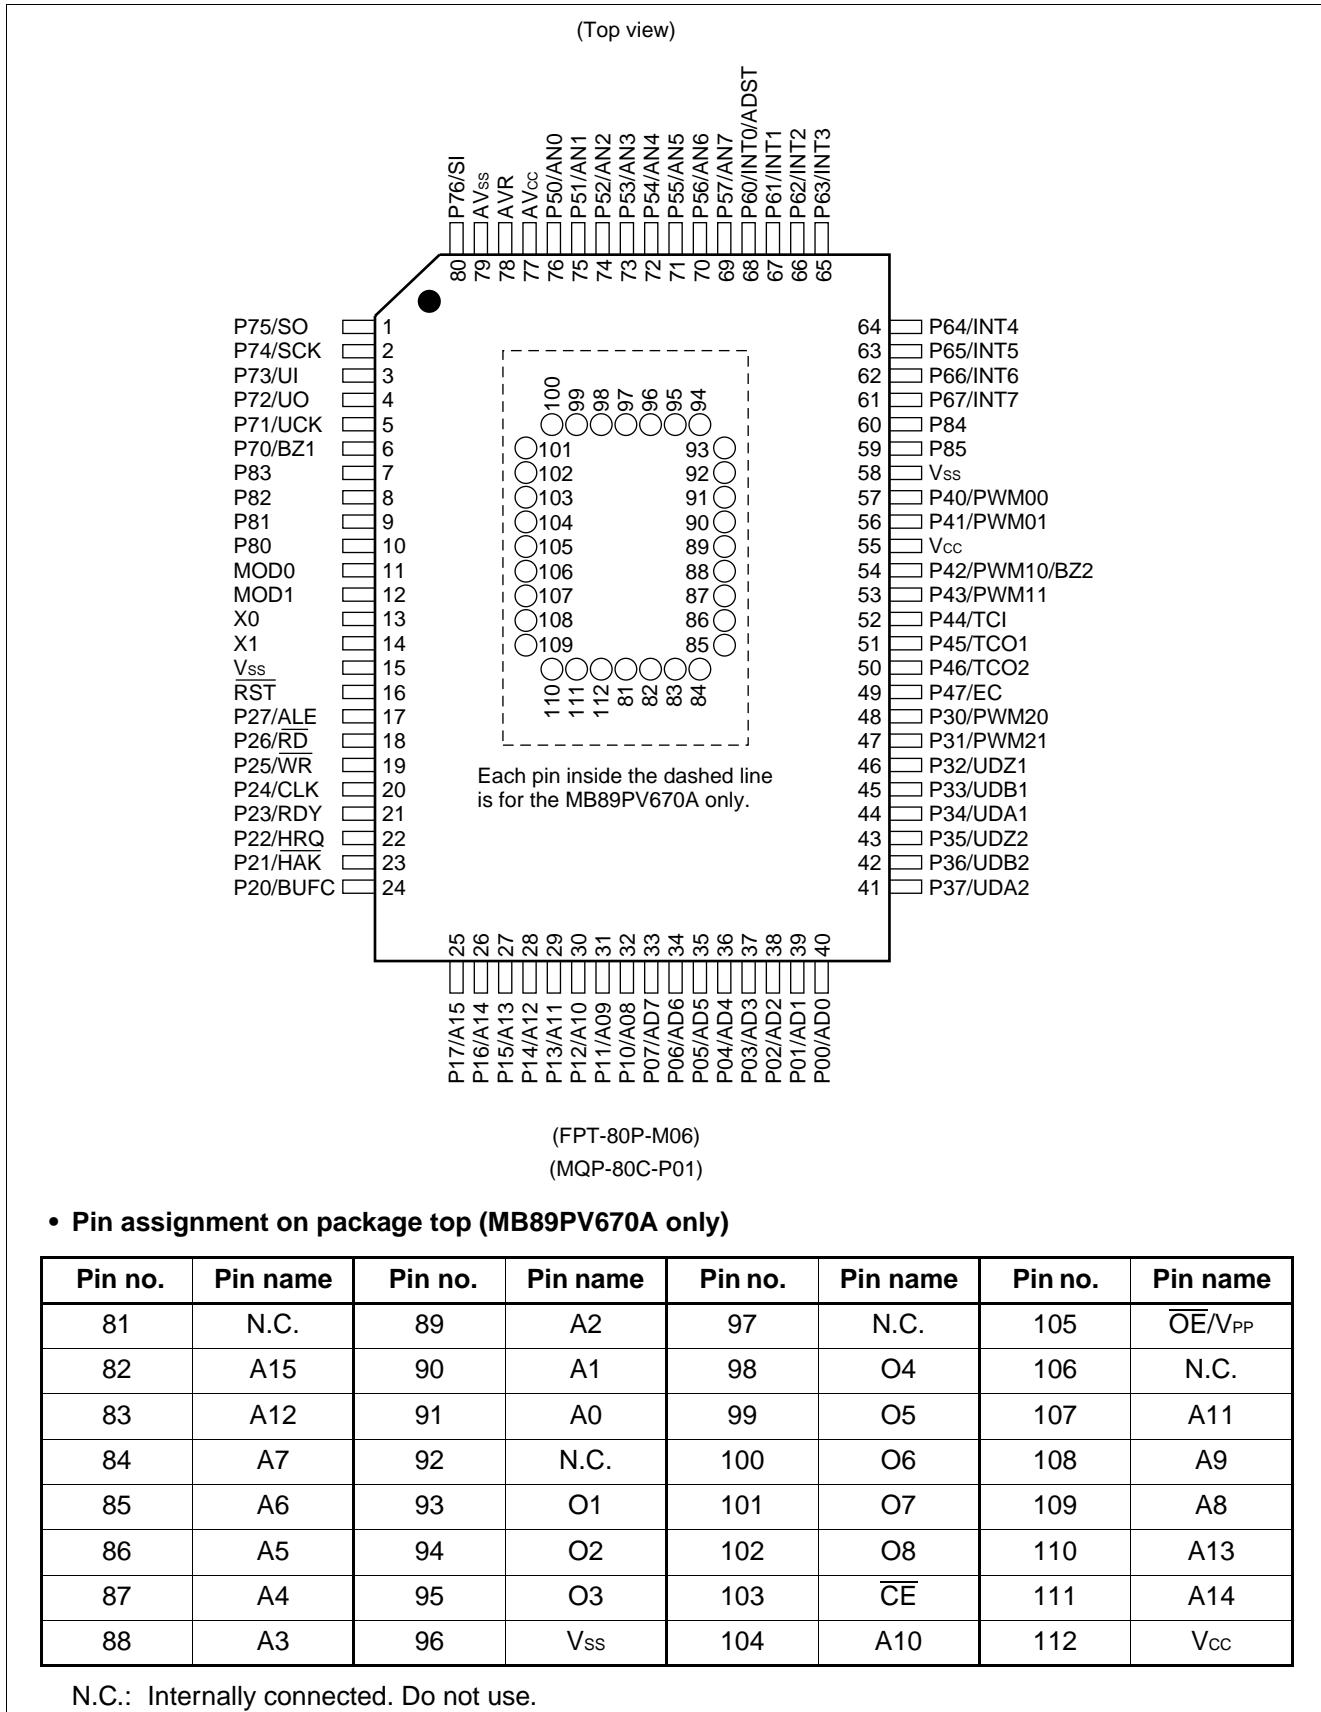

Function	Pin name for MB89670A/670AR series	Pin name for MB89670/670R series
8-bit PWM timer 1	P40/PWM00	P40/PWM00, P41/PWM01
8-bit PWM timer 2	P42/PWM10/BZ2	P42/PWM10/BZ2, P43/PWM11
8-bit PWM timer 3	P30/PWM20	P30/PWM20, P31/PWM21
8-bit PWM timer 4	P31/PWM21	—
8-bit PWM timer 5	P41/PWM01	—
8-bit PWM timer 6	P43/PWM11	—

## ■ PIN ASSIGNMENT

# MB89670R/670AR Series

# MB89670R/670AR Series

## ■ PIN DESCRIPTION

Pin no.		Pin name	Circuit type	Function
LQFP <sup>*1</sup>	QFP <sup>*2</sup> MQFP <sup>*3</sup>			
11	13	X0	A	Clock oscillator pins
12	14	X1		
9	11	MOD0	B	Operating mode selection pins Connect directly to V <sub>CC</sub> or V <sub>SS</sub> .
10	12	MOD1		
14	16	RST	C	Reset I/O pin This pin is of a N-ch open-drain output type with pull-up resistor and a hysteresis input type. “L” is output from this pin by an internal reset source. The internal circuit is initialized by the input of “L”.
38 to 31	40 to 33	P00/AD0 to P07/AD7	D	General-purpose I/O ports When an external bus is used, these ports function as multiplex pins of lower address output and data I/O.
30 to 23	32 to 25	P10/A08 to P17/A15	D	General-purpose I/O ports When an external bus is used, these ports function as upper address output pins.
22	24	P20/BUFC	F	General-purpose output port When an external bus is used, this port can also be used as a buffer control output by setting the BCTR.
21	23	P21/HAK	F	General-purpose output port When an external bus is used, this port can also be used as a hold acknowledge output by setting the BCTR.
20	22	P22/HRQ	D	General-purpose output port When an external bus is used, this port can also be used as a hold request input by setting the BCTR.
19	21	P23/RDY	D	General-purpose output port When an external bus is used, this port functions as a ready input.
18	20	P24/CLK	F	General-purpose output port When an external bus is used, this port functions as a clock output.
17	19	P25/WR	F	General-purpose output port When an external bus is used, this port functions as a write signal output.
16	18	P26/RD	F	General-purpose output port When an external bus is used, this port functions as a read signal output.
15	17	P27/ALE	F	General-purpose output port When an external bus is used, this port functions as an address latch signal output.

Pin no.		Pin name	Circuit type	Function
LQFP <sup>*1</sup>	QFP <sup>*2</sup> MQFP <sup>*3</sup>			
46	48	P30/PWM20	D	General-purpose I/O port Also serves as the PWM20 output for the 8-bit PWM timer.
45	47	P31/PWM21	D	General-purpose I/O port Also serves as the PWM21 output for the 8-bit PWM timer.
44	46	P32/UDZ1	E	General-purpose I/O port Also serves as the Z-phase input for the 8/16-bit up/down counter/timer.
43	45	P33/UDB1	E	General-purpose I/O port Also serves as the B-phase input for the 8/16-bit up/down counter/timer.
42	44	P34/UDA1	E	General-purpose I/O ports Also serves as the A-phase input for the 8/16-bit up/down counter/timer.
41	43	P35/UDZ2	E	General-purpose I/O port Also serves as the Z-phase input for the 8/16-bit up/down counter/timer.
40	42	P36/UDB2	E	General-purpose I/O port Also serves as the B-phase input for the 8/16-bit up/down counter/timer.
39	41	P37/UDA2	E	General-purpose I/O port Also serves as the A-phase input for the 8/16-bit up/down counter/timer.
55	57	P40/PWM00	D	General-purpose I/O port Also serves as the PWM00 output for the 8-bit PWM timer.
54	56	P41/PWM01	D	General-purpose I/O port Also serves as the PWM01 output for the 8-bit PWM timer.
52	54	P42/PWM10/ BZ2	D	General-purpose I/O port Also serves as the PWM10 and the BZ2 output for the 8-bit PWM timer.
51	53	P43/PWM11	D	General-purpose I/O port Also serves as the PWM11 output for the 8-bit PWM timer.
50	52	P44/TCI	E	General-purpose I/O port Also serves as the TCI input for the 8/16-bit timer/counter.
49	51	P45/TCO1	D	General-purpose I/O port Also serves as the TCO1 output for the 8/16-bit timer/counter.
48	50	P46/TCO2	D	General-purpose I/O port Also serves as the TCO2 output for the 8/16-bit timer/counter.

Pin no.		Pin name	Circuit type	Function
LQFP <sup>*1</sup>	QFP <sup>*2</sup> MQFP <sup>*3</sup>			
47	49	P47/EC	E	General-purpose I/O port Also serves as the input for the 16-bit timer/counter. The EC input is of a hysteresis input type.
74 to 67	76 to 69	P50/AN0 to P57/AN7	I	N-ch open-drain output ports Also serve as the analog inputs for the 10-bit A/D converter.
66	68	P60/INT0/ADST	J	General-purpose input port The software pull-up resistor is provided. Also serves as an external interrupt input (INT0) and an 10-bit A/D converter external start-up. This port is of a hysteresis input type.
65 to 59	67 to 61	P61/INT1 to P67/INT7	J	General-purpose input ports A software pull-up resistor is provided. Also serve as external interrupt inputs (INT1 to INT7). These ports are of a hysteresis input type.
4	6	P70/BZ1	G	N-ch open-drain I/O port Also serves as a buzzer output.
3	5	P71/UCK	K	N-ch open-drain I/O port Also serves as a UART clock I/O (UCK), switchable to CMOS.
2	4	P72/UO	K	N-ch open-drain I/O port Also serves as a UART data output (UO), switchable to CMOS.
1	3	P73/UI	G	N-ch open-drain I/O port Also serves as a UART data input (UI).
80	2	P74/SCK	K	N-ch open-drain I/O port Also serves as the clock I/O (SCK) for the 8-bit serial I/O, switchable to CMOS.
79	1	P75/SO	K	N-ch open-drain I/O port Also serves as the data output (SO) for the 8-bit serial I/O, switchable to CMOS.
78	80	P76/SI	G	N-ch open-drain I/O port Also serves as the data input (SI) for the 8-bit serial I/O.
8 to 5, 57, 58	10 to 7, 59, 60	P80 to P83, P85, P84	H	N-ch open-drain output ports
53	55	Vcc	—	Power supply pin
13, 56	15, 58	Vss	—	Power supply (GND) pin
75	77	AV <sub>cc</sub>	—	A/D converter power supply pin Use this pin at the same voltage as V <sub>cc</sub> .
76	78	AVR	—	A/D converter reference voltage input pin
77	79	AV <sub>ss</sub>	—	A/D converter power supply pin Use this pin at the same voltage as V <sub>ss</sub> .

## ■ HANDLING DEVICES

### 1. Preventing Latchup

Latchup may occur on CMOS ICs if voltage higher than  $V_{CC}$  or lower than  $V_{SS}$  is applied to input and output pins other than medium- and high-voltage pins or if higher than the voltage which shows on "1. Absolute Maximum Ratings" in section "■ Electrical Characteristics" is applied between  $V_{CC}$  and  $V_{SS}$ .

When latchup occurs, power supply current increases rapidly and might thermally damage elements. When using, take great care not to exceed the absolute maximum ratings.

Also, take care to prevent the analog power supply ( $AV_{CC}$  and  $AV_{SS}$ ) and analog input from exceeding the digital power supply ( $V_{CC}$ ) when the analog system power supply is turned on and off.

### 2. Treatment of Unused Input Pins

Leaving unused input pins open could cause malfunctions. They should be connected to a pull-up or pull-down resistor.

### 3. Treatment of Power Supply Pins on Microcontrollers with A/D and D/A Converters

Connect to be  $AV_{CC} = DAV_{CC} = V_{CC}$  and  $AV_{SS} = AVR = V_{SS}$  even if the A/D and D/A converters are not in use.

### 4. Treatment of N.C. Pins

Be sure to leave (internally connected) N.C. pins open.

### 5. Power Supply Voltage Fluctuations

Although  $V_{CC}$  power supply voltage is assured to operate within the rated range, a rapid fluctuation of the voltage could cause malfunctions, even if it occurs within the rated range. Stabilizing voltage supplied to the IC is therefore important. As stabilization guidelines, it is recommended to control power so that  $V_{CC}$  ripple fluctuations (P-P value) will be less than 10% of the standard  $V_{CC}$  value at the commercial frequency (50 Hz to 60 Hz) and the transient fluctuation rate will be less than 0.1 V/ms at the time of a momentary fluctuation such as when power is switched.

### 6. Precautions when Using an External Clock

When an external clock is used, oscillation stabilization time is required even for power-on reset (optional) and wake-up from stop mode.

# MB89670R/670AR Series

## ■ PROGRAMMING TO THE EPROM ON THE MB89P677A

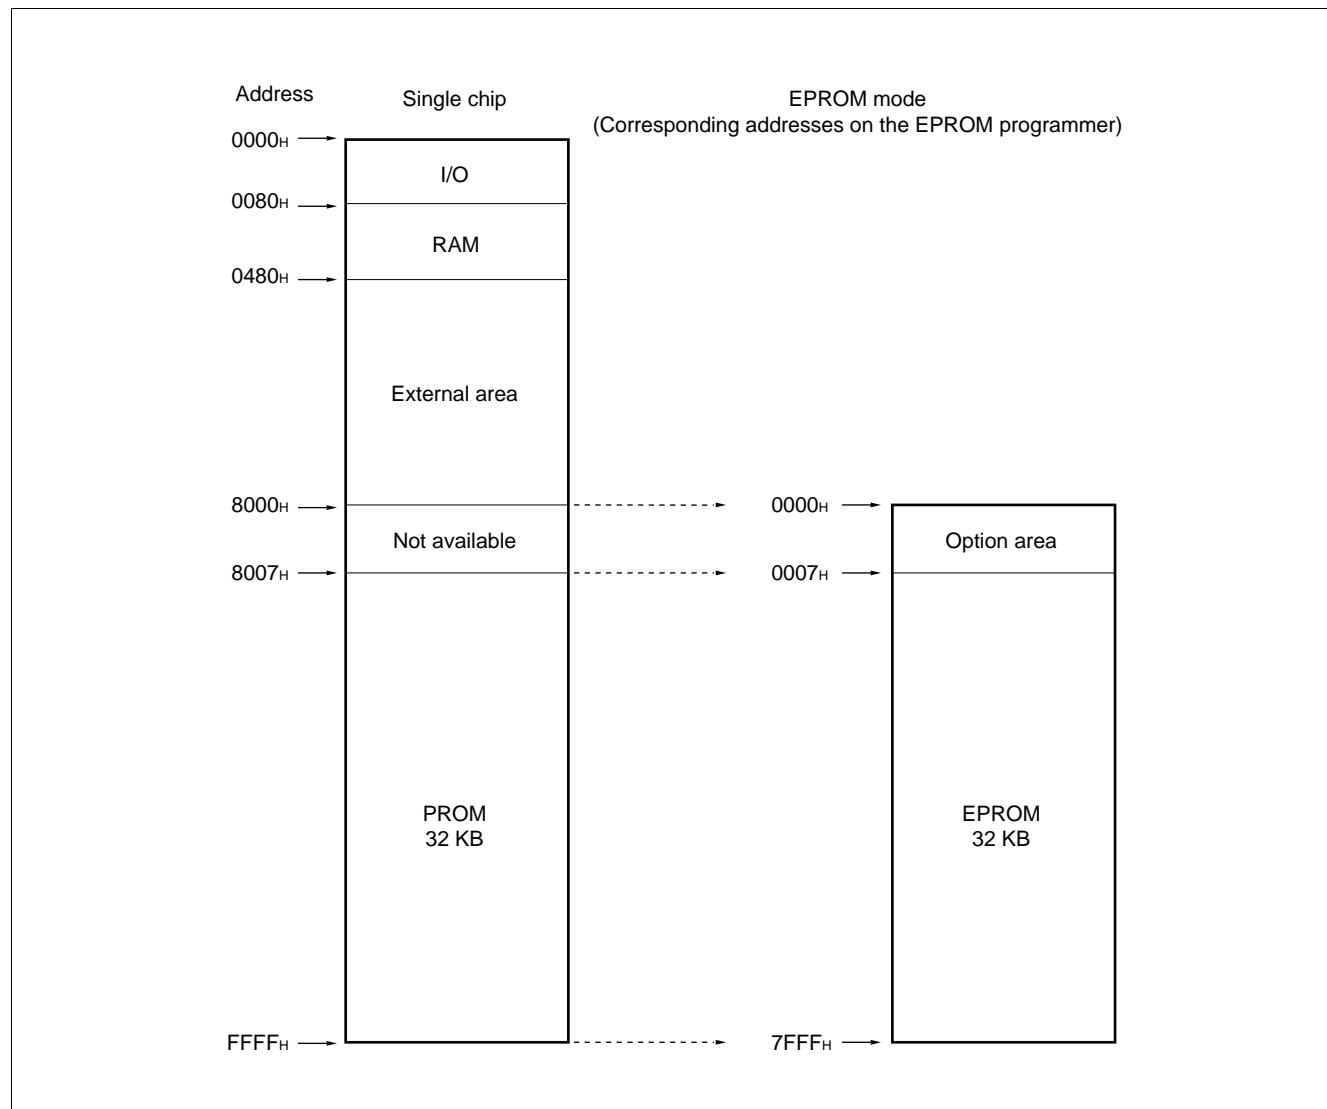

The MB89P677A is an OTPROM version of the MB89670R/670AR series.

### 1. Features

- 32-Kbyte PROM on chip
- Options can be set using the EPROM programmer.
- Equivalency to the MBM27C256A in the EPROM mode (when programmed with the EPROM programmer)

### 2. Memory Space

Memory space in the EPROM mode is diagrammed below.

### 3. Programming to the EPROM

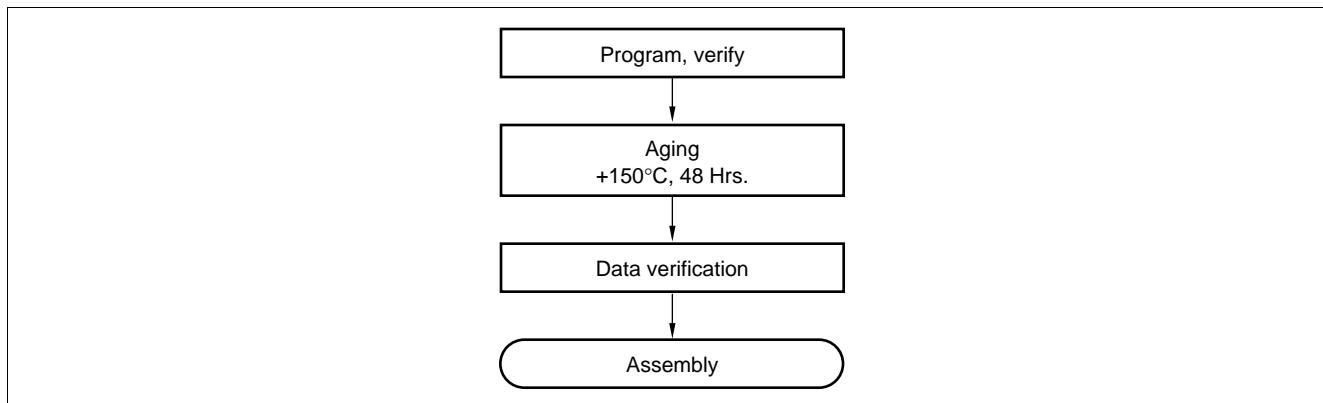

In EPROM mode, the MB89P677A functions equivalent to the MBM27C256A. This allows the PROM to be programmed with a general-purpose EPROM programmer (the electronic signature mode cannot be used) by using the dedicated socket adapter.

- **Programming procedure**

- (1) Set the EPROM programmer to the MBM27C256A.
- (2) Load program data into the EPROM programmer at  $0007_{\text{H}}$  to  $7FFF_{\text{H}}$  (note that addresses  $8007_{\text{H}}$  to  $FFFF_{\text{H}}$  while operating as a single chip assign to  $0007_{\text{H}}$  to  $7FFF_{\text{H}}$  in the EPROM mode).  
Load option data into addresses  $0000_{\text{H}}$  to  $0006_{\text{H}}$  of the EPROM programmer. (For information about each corresponding option, see "7. Setting OTPROM Options.")
- (3) Program with the EPROM programmer.

### 4. Recommended Screening Conditions

High-temperature aging is recommended as the pre-assembly screening procedure for a product with a blanked OTPROM microcomputer program.

### 5. Programming Yield

Due to the nature of the blanked OTPROM microcomputer, bit programming test can't be conducted as Fujitsu's shipping test. Therefore a programming yield of 100% cannot be assured at all times.

### 6. EPROM Programmer Socket Adapter

FAX: (81)-3-5396-9106

Note: Depending on the EPROM programmer, inserting a capacitor of about  $0.1 \mu\text{F}$  between  $V_{PP}$  and  $V_{SS}$  or  $V_{CC}$  and  $V_{SS}$  can stabilize programming operations.

# MB89670R/670AR Series

## 7. Setting OTPROM Options

The programming procedure is the same as that for the PROM.

Options can be set by programming values at the addresses shown on the memory map. The relationship between bits and options is shown on the following bit map:

- **OTPROM option bit map**

Address	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
0000H	Vacancy Readable	Vacancy Readable	Vacancy Readable	Vacancy Readable	Reset pin output 1: Yes 0: No	Power-on reset 1: Yes 0: No	Oscillation stabilization time 00: 2 <sup>4</sup> /Fc 10: 2 <sup>17</sup> /Fc	01: 2 <sup>14</sup> /Fc 11: 2 <sup>18</sup> /Fc
0001H	P17 Pull-up 1: No 0: Yes	P16 Pull-up 1: No 0: Yes	P15 Pull-up 1: No 0: Yes	P14 Pull-up 1: No 0: Yes	P13 Pull-up 1: No 0: Yes	P12 Pull-up 1: No 0: Yes	P11 Pull-up 1: No 0: Yes	P10 Pull-up 1: No 0: Yes
0002H	P37 Pull-up 1: No 0: Yes	P36 Pull-up 1: No 0: Yes	P35 Pull-up 1: No 0: Yes	P34 Pull-up 1: No 0: Yes	P33 Pull-up 1: No 0: Yes	P32 Pull-up 1: No 0: Yes	P31 Pull-up 1: No 0: Yes	P30 Pull-up 1: No 0: Yes
0003H	P47 Pull-up 1: No 0: Yes	P46 Pull-up 1: No 0: Yes	P45 Pull-up 1: No 0: Yes	P44 Pull-up 1: No 0: Yes	P43 Pull-up 1: No 0: Yes	P42 Pull-up 1: No 0: Yes	P41 Pull-up 1: No 0: Yes	P40 Pull-up 1: No 0: Yes
0004H	Vacancy Readable	Vacancy Readable	Vacancy Readable	Vacancy Readable	Vacancy Readable	Vacancy Readable	Vacancy Readable	Vacancy Readable
0005H	Vacancy Readable	Vacancy Readable	Vacancy Readable	P74 Pull-up 1: No 0: Yes	P73 Pull-up 1: No 0: Yes	P72 Pull-up 1: No 0: Yes	P71 Pull-up 1: No 0: Yes	P70 Pull-up 1: No 0: Yes
0006H	Vacancy Readable	Vacancy Readable	Vacancy Readable	Vacancy Readable	P04 to P07 Pull-up 1: No 0: Yes	P00 to P03 Pull-up 1: No 0: Yes	P76 Pull-up 1: No 0: Yes	P75 Pull-up 1: No 0: Yes

Notes:

- Each bit is set to "1" as the initialized value.
- Do not write "0" to the vacant bit.

The read value of the vacant bit is "1", unless "0" is written to it.

## ■ PROGRAMMING TO THE EPROM WITH PIGGYBACK/EVALUATION DEVICE

### 1. EPROM for Use

MBM27C512-20TV

### 2. Programming Socket Adapter

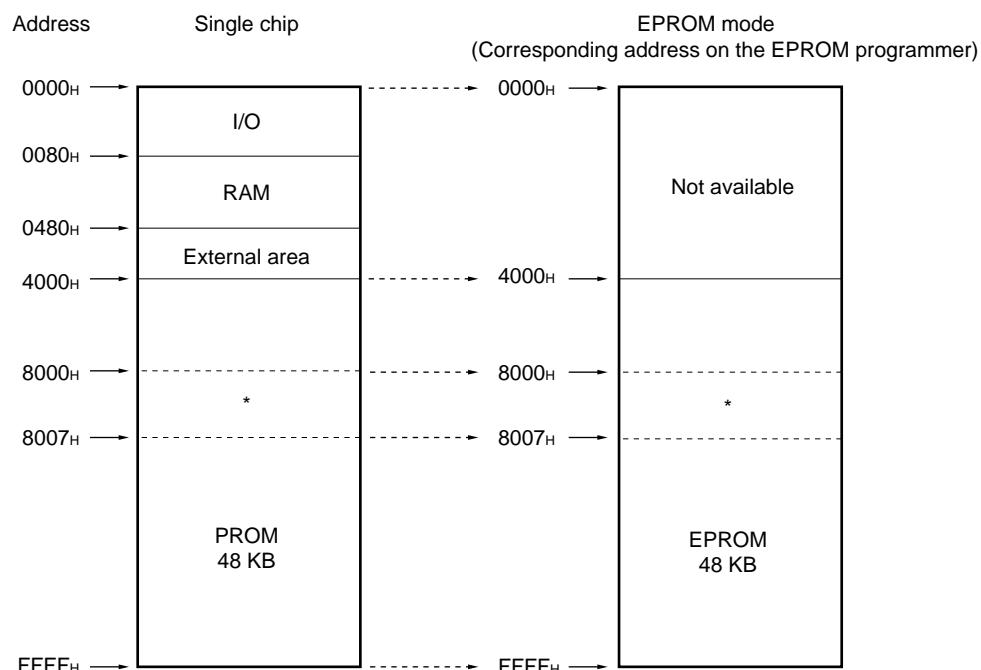

To program to the PROM using an EPROM programmer, use the socket adapter (manufacturer: Sun Hayato Co., Ltd.) listed below.

Package	Adapter socket part number
LCC-32(Rectangle)	ROM-32LC-28DP-YG

Inquiry: Sun Hayato Co., Ltd.: TEL: (81)-3-3986-0403  
FAX: (81)-3-5396-9106

### 3. Memory Space

Memory space in each mode is diagrammed below.

\*: Note: For the MB89P677A, this area is an option setting area.

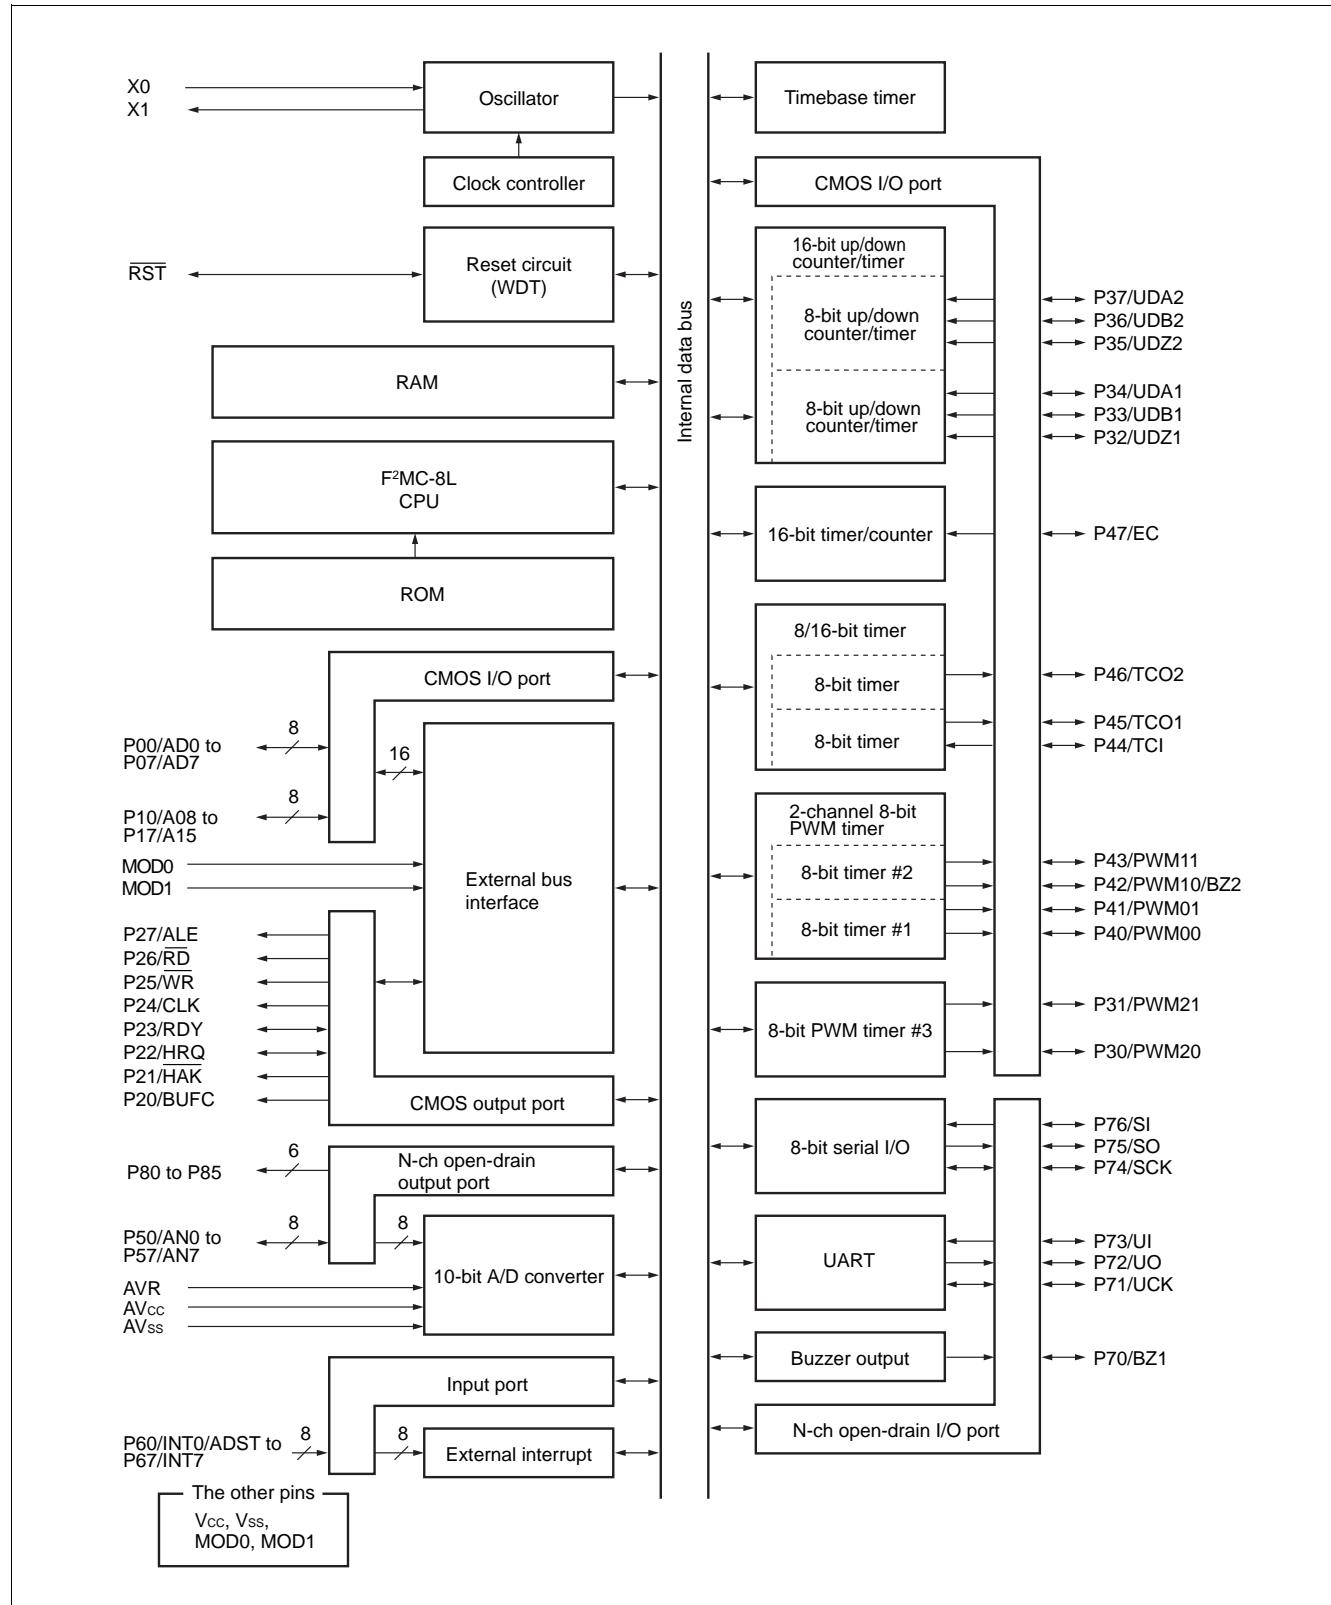

### 4. Programming to the EPROM

- (1) Set the EPROM programmer to the MBM27C512.
- (2) Load program data into the EPROM programmer at 4000H to FFFFH.
- (3) Program to 4000H to FFFFH with the EPROM programmer.

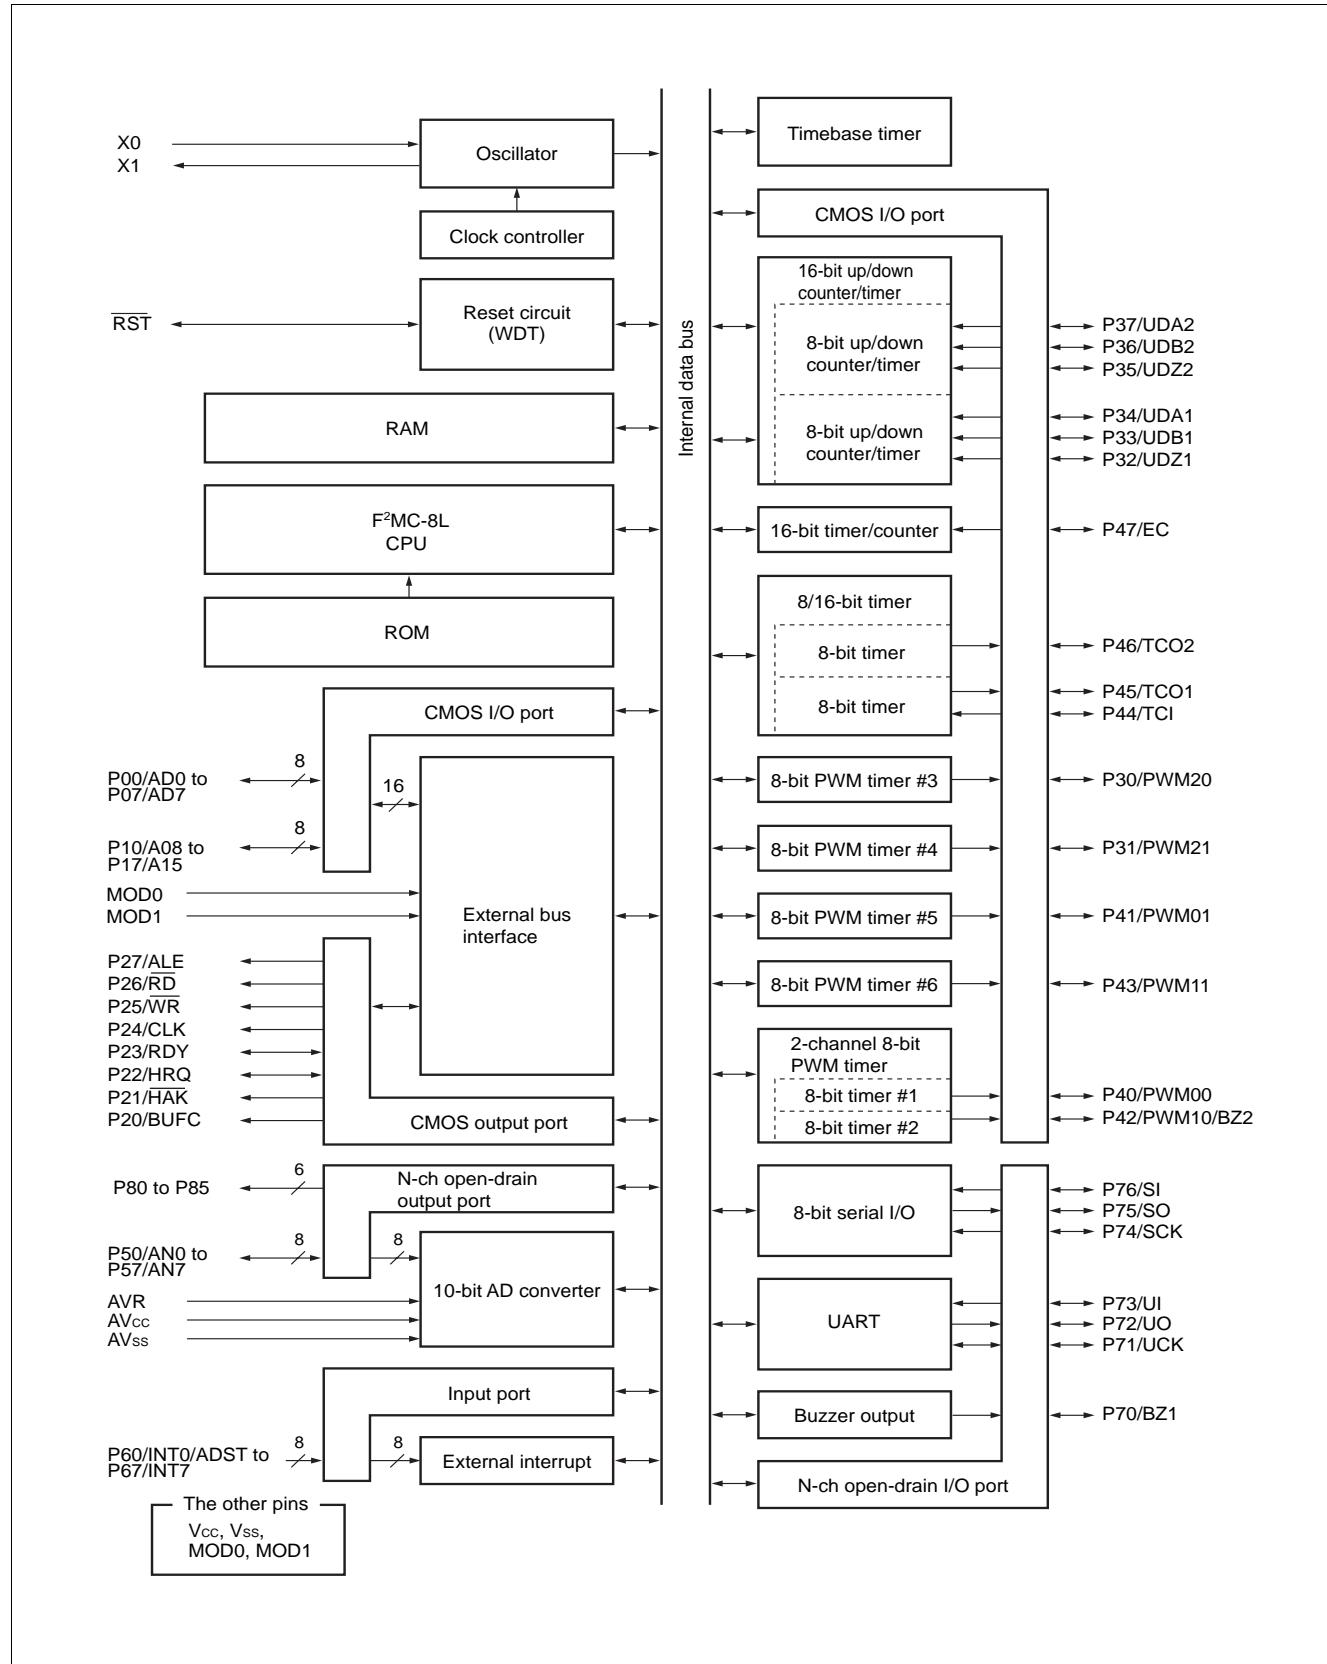

# MB89670R/670AR Series

## ■ BLOCK DIAGRAM

### 1. Block Diagram of MB89673R/89675R

## 2. Block Diagram of MB89673AR /89675AR/89677AR/89P677A/89PV670A

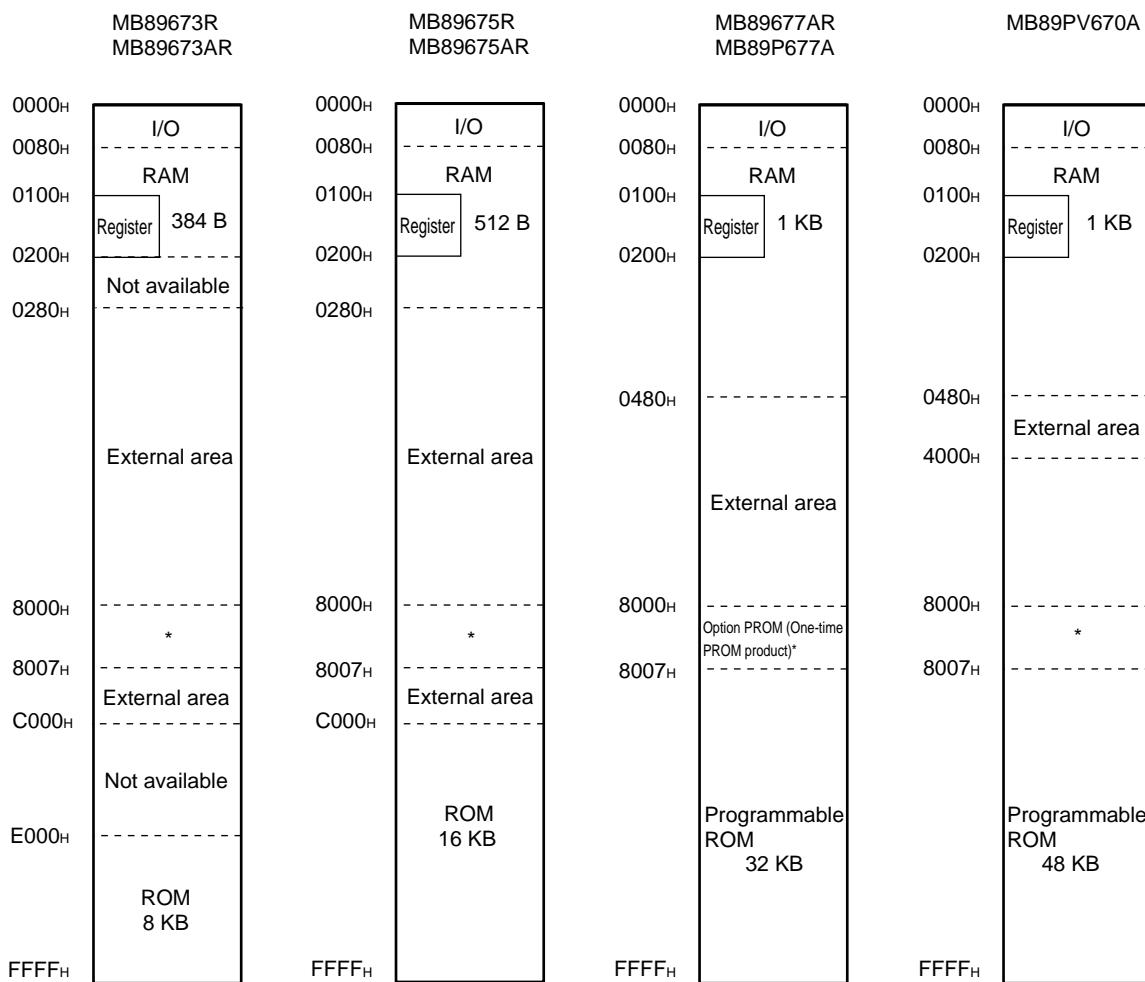

# MB89670R/670AR Series

## ■ CPU CORE

### 1. Memory Space

The microcontrollers of the MB89670R/670AR series offer 64 Kbytes of memory for storing all of I/O, data, and program areas. The I/O area is allocated at the lowest address. The data area is allocated immediately above the I/O area. The data area can be divided into register, stack, and direct areas according to the application. The program area is allocated from exactly the opposite end of I/O area, that is, near the highest address. The tables of interrupt reset vectors and vector call instructions are allocated from the highest address within the program area. The memory space of the MB89670R/670AR series is structured as illustrated below.

#### • Memory Space

\*: Since addresses 8000H to 8006H for the MB89P677A comprise an option area, pay attention to use this area for the other products in this series.

## 2. Registers

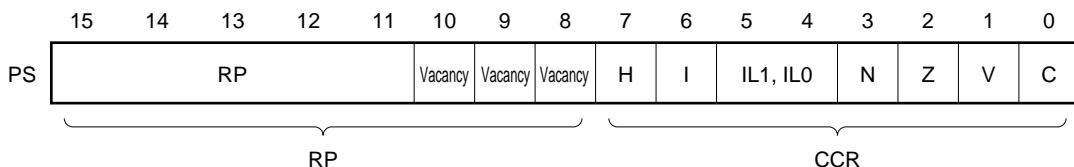

The F<sup>2</sup>MC-8L family has two types of registers; dedicated hardware registers in the CPU and general-purpose registers in the memory. The following dedicated registers are provided:

- |                            |  |
|----------------------------|--|
| Program counter (PC):      | A 16-bit register for indicating the instruction storage positions   |
| Accumulator (A):           | A 16-bit temporary register for storing arithmetic operations, etc. When the instruction is an 8-bit data processing instruction, the lower byte is used.            |
| Temporary accumulator (T): | A 16-bit register which performs arithmetic operations with the accumulator<br>When the instruction is an 8-bit data processing instruction, the lower byte is used. |
| Index register (IX):       | A 16-bit register for index modification   |
| Extra pointer (EP):        | A 16-bit pointer for indicating a memory address   |
| Stack pointer (SP):        | A 16-bit register for indicating a stack area  |
| Program status (PS):       | A 16-bit register for storing a register bank pointer, a condition code  |

16 bits		Initial value
PC	: Program counter	FFFFD <sub>H</sub>
A	: Accumulator	Indeterminate
T	: Temporary accumulator	Indeterminate
IX	: Index register	Indeterminate
EP	: Extra pointer	Indeterminate
SP	: Stack pointer	Indeterminate
PS	: Program status	I-flag = 0, IL1, IL0 = 11 The other bit values are indeterminate.

The PS can further be divided into higher 8 bits for use as a register bank pointer (RP) and the lower 8 bits for use as a condition code register (CCR). (See the diagram below.)

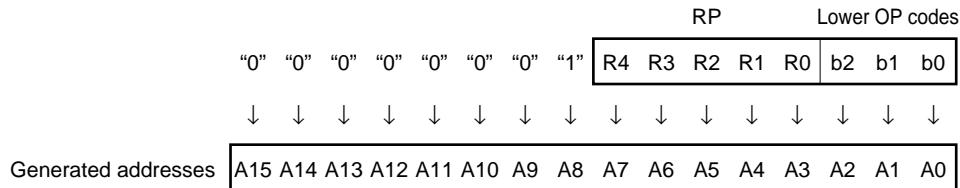

### • Structure of the Program Status Register

# MB89670R/670AR Series

The RP indicates the address of the register bank currently in use. The relationship between the pointer contents and the actual address is based on the conversion rule illustrated below.

- Rule for Conversion of Actual Addresses of the General-purpose Register Area

The CCR consists of bits indicating the results of arithmetic operations and the contents of transfer data and bits for control of CPU operations at the time of an interrupt.

- H-flag: Set to '1' when a carry or a borrow from bit 3 to bit 4 occurs as a result of an arithmetic operation. Cleared to '0' otherwise. This flag is for decimal adjustment instructions.
- I-flag: Interrupt is enabled when this flag is set to '1'. Interrupt is disabled when the flag is cleared to '0'. Cleared to '0' at the reset.
- IL1, IL0: Indicates the level of the interrupt currently allowed. Processes an interrupt only if its request level is higher than the value indicated by this bit.

IL1	IL0	Interrupt level	High-low
0	0	1	High
0	1		
1	0	2	↓ Low
1	1		

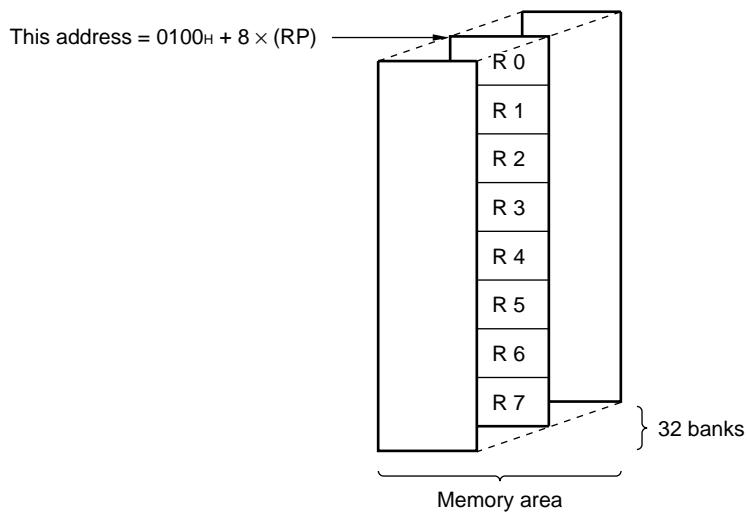

- N-flag: Set to '1' if the MSB becomes '1' as the result of an arithmetic operation. Cleared to '0' when the bit is cleared to '0'.
- Z-flag: Set to '1' when an arithmetic operation results in 0. Cleared to '0' otherwise.
- V-flag: Set to '1' if the complement on 2 overflows as a result of an arithmetic operation. Cleared to '0' if the overflow does not occur.
- C-flag: Set to '1' when a carry or a borrow from bit 7 occurs as a result of an arithmetic operation. Cleared to '0' otherwise. Set to the shift-out value in the case of a shift instruction.

The following general-purpose registers are provided:

General-purpose registers: An 8-bit register for storing data

The general-purpose registers are of 8 bits each and allocated in the register banks of the memory. One bank contains eight registers and up to 32 banks can be used on every product of the MB89670R/670AR series. The bank currently in use is indicated by the register bank pointer (RP).

- **Register Bank Configuration**

## ■ ELECTRICAL CHARACTERISTICS

### 1. Absolute Maximum Ratings

(AV<sub>SS</sub> = V<sub>SS</sub> = 0.0 V)

Parameter	Symbol	Rated value		Unit	Remarks
		Min.	Max.		
Power supply voltage	V <sub>CC</sub>	V <sub>SS</sub> - 0.3	V <sub>SS</sub> + 7.0	V	*
	AV <sub>CC</sub>	V <sub>SS</sub> - 0.3	V <sub>CC</sub> + 0.3	V	*
A/D converter reference input voltage	AVR	V <sub>SS</sub> - 0.3	V <sub>CC</sub> + 0.3	V	AVR must not exceed "AV <sub>CC</sub> + 0.3 V".
Input voltage	V <sub>I</sub>	V <sub>SS</sub> - 0.3	V <sub>CC</sub> + 0.3	V	
Output voltage	V <sub>O1</sub>	V <sub>SS</sub> - 0.3	V <sub>CC</sub> + 0.3	V	Except P80 to P85
	V <sub>O2</sub>	V <sub>SS</sub> - 0.3	V <sub>SS</sub> + 7.0	V	P80 to P85
"L" level maximum output current	I <sub>OL</sub>	—	20	mA	
"L" level average output current	I <sub>OLAV1</sub>	—	4	mA	Average value (operating current × operating rate)
	I <sub>OLAV2</sub>	—	8	mA	Average value (operating current × operating rate) P80 to P85
"L" level total maximum output current	ΣI <sub>OL</sub>	—	100	mA	
"L" level total average output current	ΣI <sub>OLAV</sub>	—	40	mA	Average value (operating current × operating rate)
"H" level maximum output current	I <sub>OH</sub>	—	-20	mA	
"H" level average output current	I <sub>OHAV</sub>	—	-4	mA	Average value (operating current × operating rate)
"H" level total maximum output current	ΣI <sub>OH</sub>	—	-50	mA	
"H" level total average output current	ΣI <sub>OHAV</sub>	—	-20	mA	Average value (operating current × operating rate)
Power consumption	P <sub>D</sub>	—	300	mW	
Operating temperature	T <sub>A</sub>	-40	+85	°C	
Storage temperature	T <sub>STG</sub>	-55	+150	°C	

\* : Use AV<sub>CC</sub> and V<sub>CC</sub> set at the same voltage.

Take care that AVR does not exceed "AV<sub>CC</sub> + 0.3 V" and AV<sub>CC</sub> does not exceed V<sub>CC</sub>, such as when power is turned on.

**WARNING:** Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

# MB89670R/670AR Series

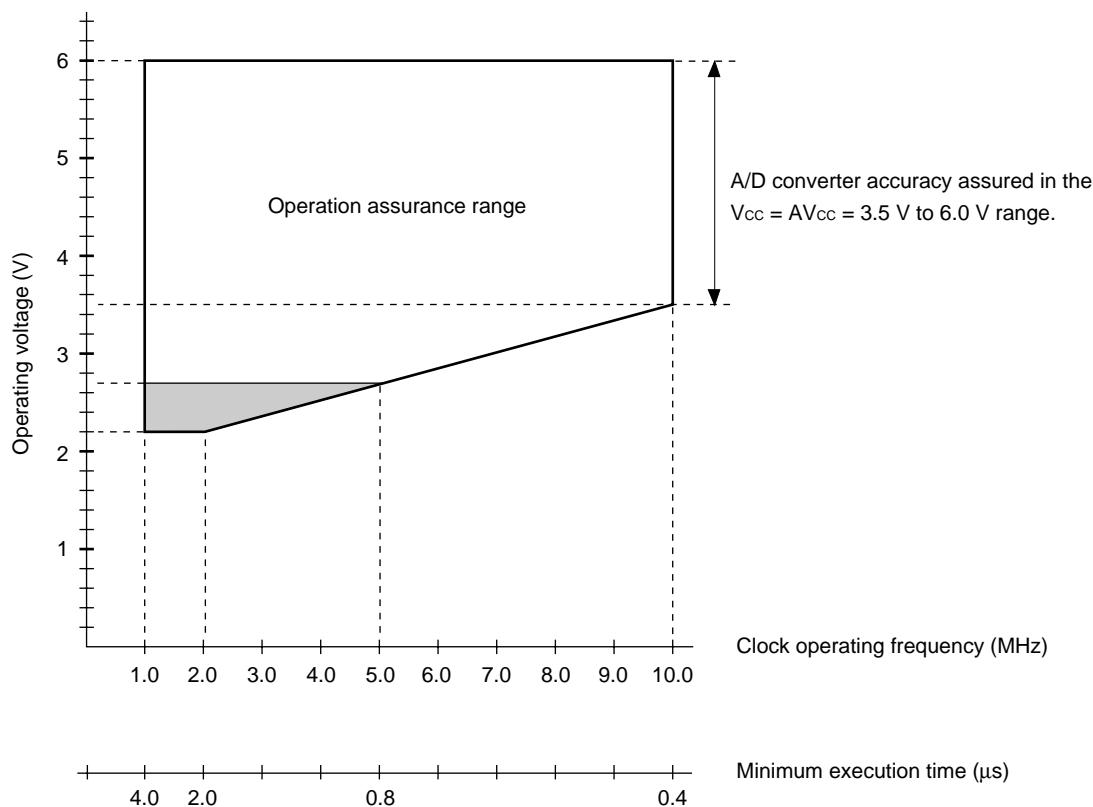

## 2. Recommended Operating Conditions

(AV<sub>SS</sub> = V<sub>SS</sub> = 0.0 V)

Parameter	Symbol	Rated value		Unit	Remarks
		Min.	Max.		
Power supply voltage	V <sub>CC</sub> AV <sub>CC</sub>	2.2*	6.0	V	Normal operation assurance range MB89673R/673AR/675R/675AR/677AR
		2.7*	6.0	V	Normal operation assurance range MB89PV670A/P677A
		1.5	6.0	V	Retains the RAM state in the stop mode
A/D converter reference input voltage	AVR	0.0	AV <sub>CC</sub>	V	
Operating temperature	T <sub>A</sub>	-40	+85	°C	

\* : These values vary with the operating frequency, and analog assurance range. See Figure 1 and "5. A/D Converter Electrical Characteristics."

**Figure 1 Operating Voltage vs. Clock Operating Frequency**

Note: The shaded area is additional operating assurance range only for the MB89673R/673AR/675R/675AR/677AR.

# MB89670R/670AR Series

The horizontal line of the graph in the figure 1 indicates the operating frequency of the external oscillator and the lower horizontal line indicates the min. instruction execution time =  $4/F_c$ .

In the case of changing the operating clock with the clock gear function, be sure to convert it into the min. instruction execution time on the lower horizontal line since the operating voltage range is dependent on the min. instruction execution time.

**WARNING:** Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representative beforehand.

# MB89670R/670AR Series

## 3. DC Characteristics

(AV<sub>CC</sub> = V<sub>CC</sub> = 5.0 V ±10%, AV<sub>SS</sub> = V<sub>SS</sub> = 0.0 V, T<sub>A</sub> = -40°C to +85°C)

Parameter	Symbol	Pin name	Condition	Rated value			Unit	Remarks

\*1: The measurement conditions of the power supply current are as follows.

The external clock is used.

The output pins are open.

V<sub>CC</sub> is upon the condition above the table.

\*2: For information on t<sub>inst</sub>, see "(4) Instruction Cycle" in "4. AC Characteristics."

Note: The current consumption of connected EPROM and ICE is not considered on MB89PV670A.

# MB89670R/670AR Series

## 4. AC Characteristics

### (1) Reset Timing

(AV<sub>CC</sub> = V<sub>CC</sub> = 5.0 V ±10%, AV<sub>SS</sub> = V<sub>SS</sub> = 0.0 V, T<sub>A</sub> = -40°C to +85°C)

Parameter	Symbol	Condition	Rated value		Unit	Remarks
			Min.	Max.		
RST "L" pulse width	t <sub>ZLZH</sub>	—	48 t <sub>HCYL</sub>	—	ns	

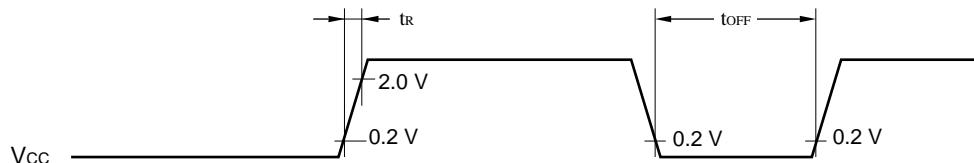

### (2) Specifications for Power-on Reset

(AV<sub>SS</sub> = V<sub>SS</sub> = 0.0 V, T<sub>A</sub> = -40°C to +85°C)

Parameter	Symbol	Condition	Rated value		Unit	Remarks
			Min.	Max.		
Power supply rising time	t <sub>R</sub>	—	—	50	ms	Power-on reset function only
Power supply cut-off time	t <sub>OFF</sub>		1	—	ms	Min. internal time to next power-on reset

Note: Make sure that power supply rises within the selected oscillation stabilization time.

If power supply voltage needs to be varied in the course of operation, a smooth voltage rise is recommended.

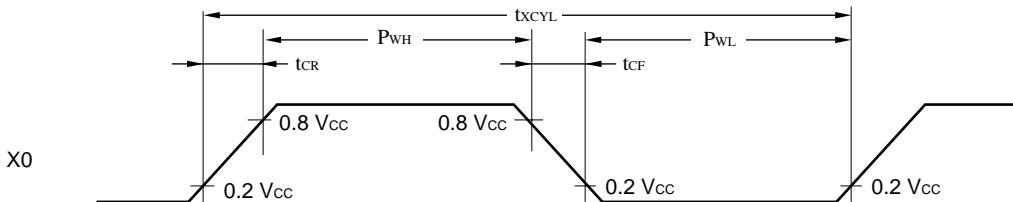

### (3) Clock Timing

(AV<sub>SS</sub> = V<sub>SS</sub> = 0.0 V, T<sub>A</sub> = -40°C to +85°C)

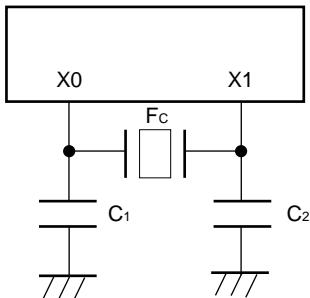

Parameter	Symbol	Pin name	Condition	Rated value		Unit	Remarks
				Min.	Max.		
Clock frequency	F <sub>c</sub>	X0, X1	—	1	10	MHz	
Clock cycle time	t <sub>XYCL</sub>	X0, X1		100	1000	ns	
Input clock pulse width	P <sub>WH</sub> P <sub>WL</sub>	X0		20	—	ns	External clock
Input clock rising/falling time	t <sub>CR</sub> t <sub>CF</sub>	X0		—	10	ns	External clock

Reference voltage supply current	I <sub>R</sub>	AVR	—	200	—	μA	AVR = 5.0 V

## 6. Notes on Using A/D Converter

- The smaller | AVR - AV<sub>SS</sub> |, the greater the error would become relatively.
- The output impedance of the external circuit for the analog input must satisfy the following conditions:  
Output impedance of the external circuit < Approx. 10 kΩ If the output impedance of the external circuit is too high, an analog voltage sampling time might be insufficient (sampling time = 6 μs at 10 MHz oscillation).

An analog input equivalent circuit is shown below.

### • Analog Input Equivalent Circuit

Since the A/D converter contains a sample hold circuit, the level of the analog input pin might not stabilize within the sampling period after starting A/D, resulting in inaccurate A/D conversion values, if the input impedance to the analog pin is too high. Be sure to maintain an appropriate input impedance to the analog pin.

It is recommended to keep the input impedance to the analog pin from exceeding 10 kΩ. If it exceeds 10 kΩ, it is recommended to connect a capacitor of approx. 0.1 μF to the analog input pin.

Except for the sampling period after starting A/D, the input leakage current of the analog input pin is less than 10 μA.

## 7. A/D Converter Glossary

- Resolution

Analog-change that are identifiable with the A/D converter.

- Linearity error

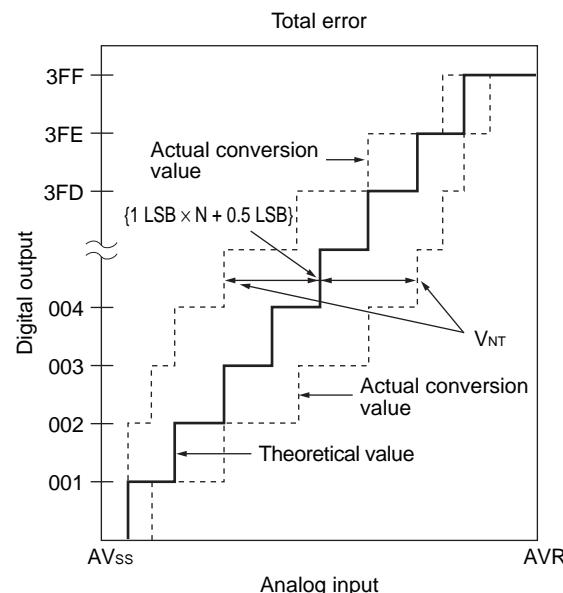

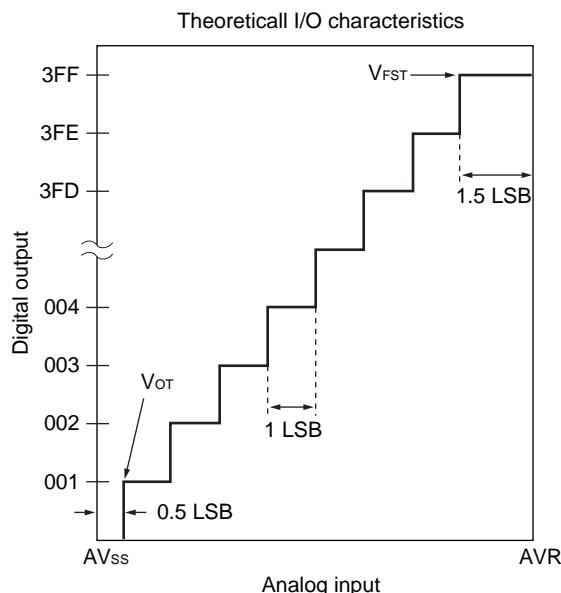

The deviation of the straight line connecting the zero transition point ("00 0000 0000" ↔ "00 0000 0001") with the full-scale transition point ("11 1111 1111" ↔ "11 1111 1110") from actual conversion characteristics

- Differential linearity error

The deviation of the input voltage needed to change the output code by 1 LSB from the theoretical voltage

- Total error

The difference between theoretical and actual conversion values, caused by the zero transition error, full-scale transition error, linearity error, quantization error, and noise.

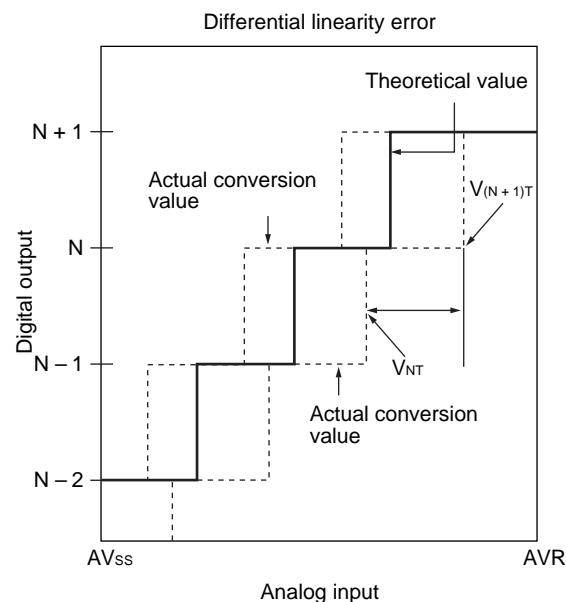

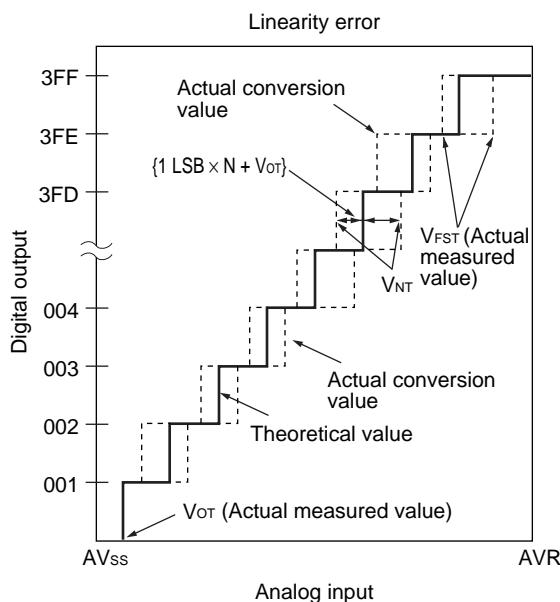

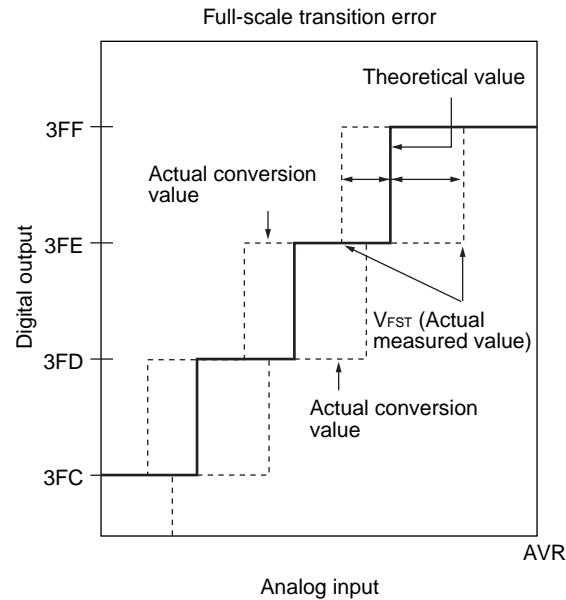

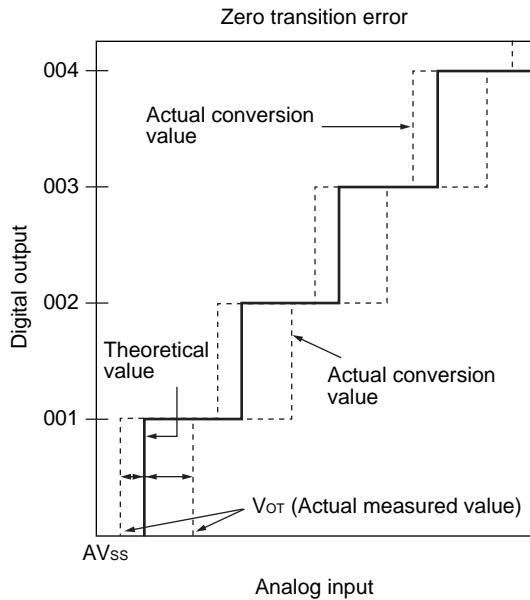

$$1 \text{ LSB} = \frac{V_{\text{FST}} - V_{\text{OT}}}{1022} \text{ (V)}$$

$$\text{Total error of digital output } N = \frac{V_{\text{NT}} - \{1 \text{ LSB} \times N + 0.5 \text{ LSB}\}}{1 \text{ LSB}}$$

(Continued)

# MB89670R/670AR Series

(Continued)

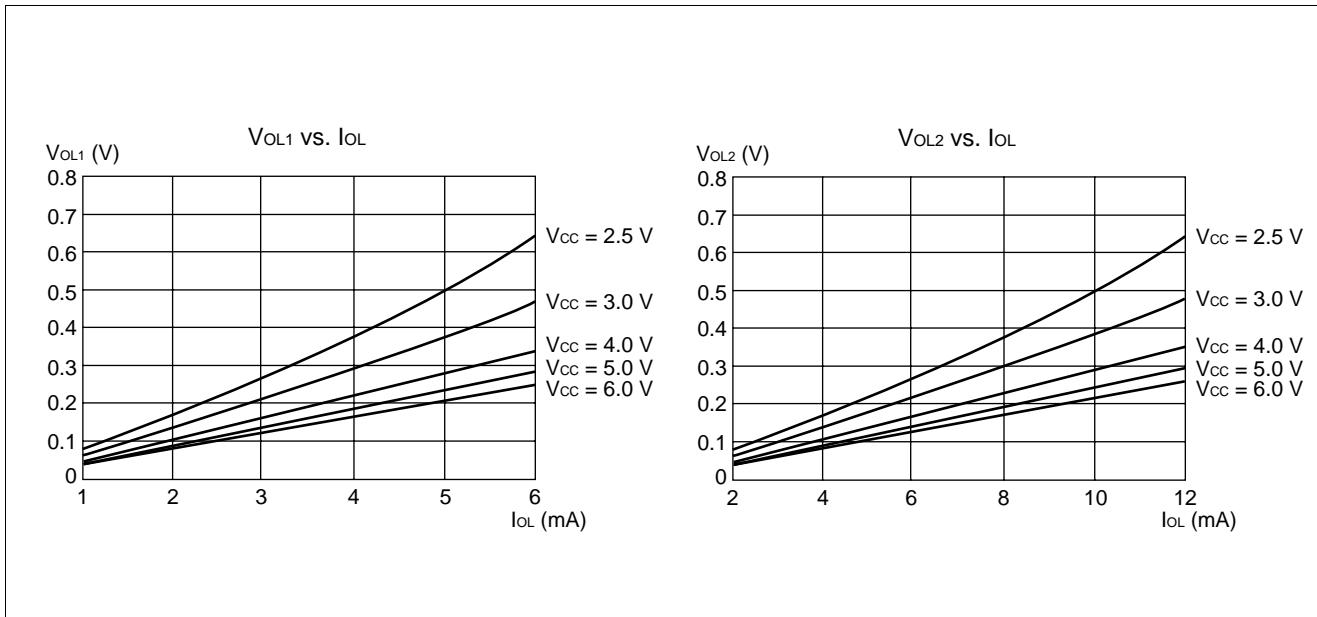

$$\text{Linearity error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times N + V_{OT}\}}{1 \text{ LSB}}$$

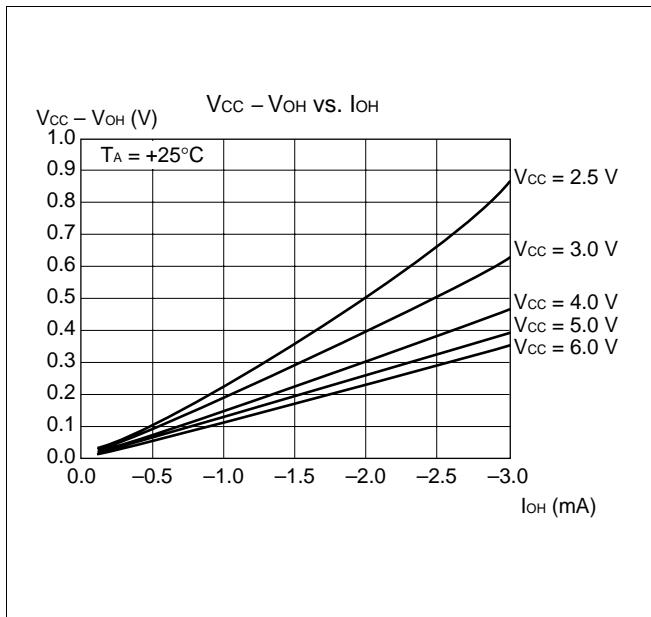

$$\text{Differential linearity error of digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1$$

## ■ EXAMPLE CHARACTERISTICS

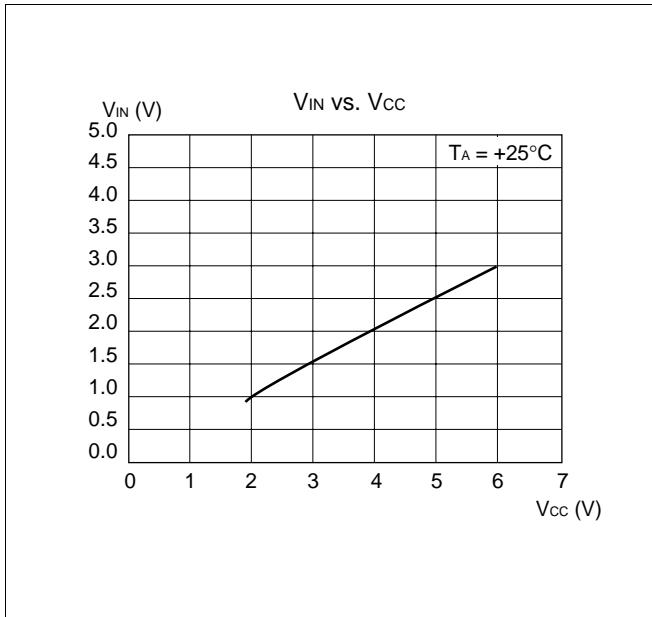

### (1) "L" Level Output Voltage

### (2) "H" Level Output Voltage

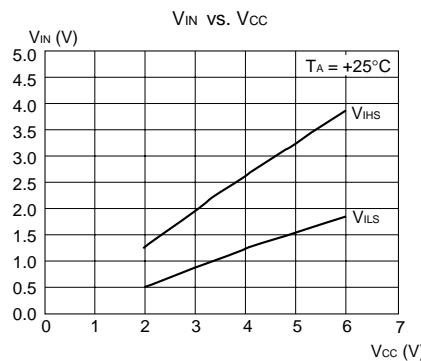

### (3) "H" Level Input Voltage/"L" Level Input Voltage (CMOS Input)

# MB89670R/670AR Series

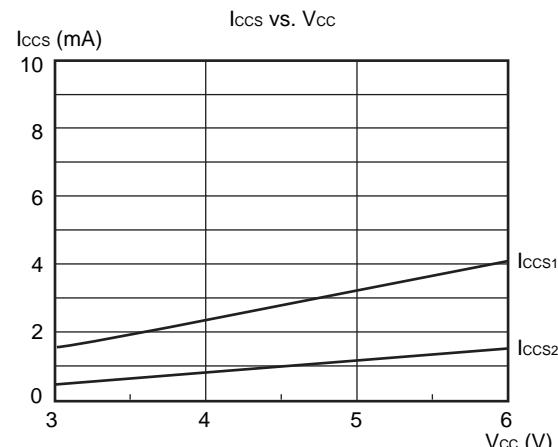

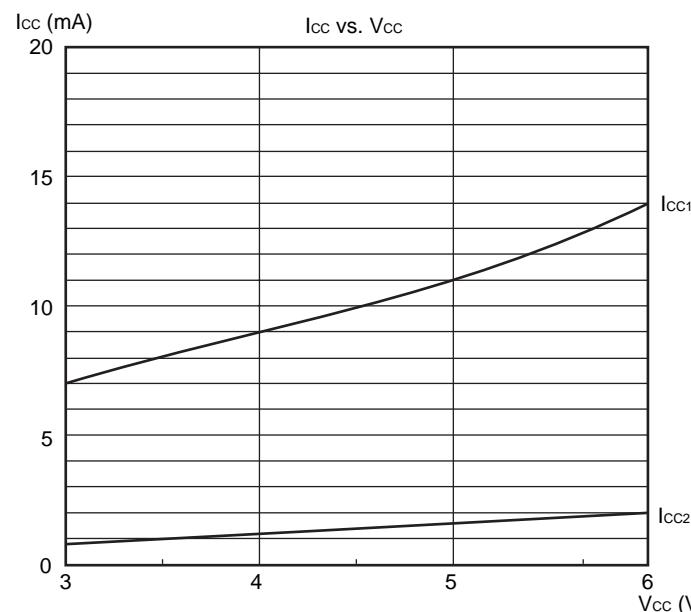

## (4) "H" Level Input Voltage/"L" Level Input Voltage (Hysteresis Input)

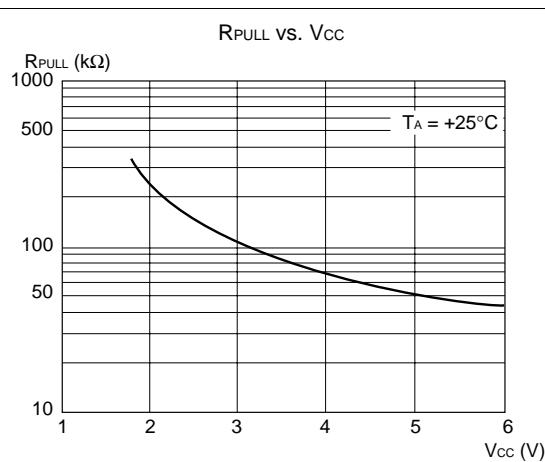

V<sub>IHS</sub>: Threshold when input voltage in hysteresis characteristics is set to "H" level

V<sub>ILS</sub>: Threshold when input voltage in hysteresis characteristics is set to "L" level

## (5) Power Supply Current (External Clock)

## (6) Pull-up Resistance

## ■ INSTRUCTIONS (136 instructions)

Execution instructions can be divided into the following four groups:

- Transfer
- Arithmetic operation
- Branch
- Others

Table 1 lists symbols used for notation of instructions.

**Table 1 Instruction Symbols**

Symbol	Meaning
dir	Direct address (8 bits)
off	Offset (8 bits)
ext	Extended address (16 bits)
#vct	Vector table number (3 bits)
#d8	Immediate data (8 bits)
#d16	Immediate data (16 bits)
dir: b	Bit direct address (8/3 bits)
rel	Branch relative address (8 bits)
@	Register indirect (e.g.: @A, @IX, @EP)
A	Accumulator A (Whether its length is 8 or 16 bits is determined by the instruction in use.)
AH	Upper 8 bits of accumulator A (8 bits)
AL	Lower 8 bits of accumulator A (8 bits)
T	Temporary accumulator T (Whether its length is 8 or 16 bits is determined by the instruction in use.)
TH	Upper 8 bits of temporary accumulator T (8 bits)
TL	Lower 8 bits of temporary accumulator T (8 bits)
IX	Index register IX (16 bits)

(Continued)

# MB89670R/670AR Series

(Continued)

Symbol	Meaning
EP	Extra pointer EP (16 bits)
PC	Program counter PC (16 bits)
SP	Stack pointer SP (16 bits)
PS	Program status PS (16 bits)
dr	Accumulator A or index register IX (16 bits)
CCR	Condition code register CCR (8 bits)
RP	Register bank pointer RP (5 bits)
Ri	General-purpose register Ri (8 bits, i = 0 to 7)
×	indicates that the very × is the immediate data. (Whether its length is 8 or 16 bits is determined by the instruction in use.)
( × )	indicates that the contents at address '×' is the target of accessing. (Whether its length is 8 or 16 bits is determined by the instruction in use.)
(( × ))	The contents addressed by the contents at address '×' is the target of accessing. (Whether its length is 8 or 16 bits is determined by the instruction in use.)

Columns indicate the following:

- Mnemonic: Assembler notation of an instruction
- ~: The number of instructions. An instruction cycle consists of 2 machine cycles.
- #: The number of bytes
- Operation: Operation of an instruction
- TL, TH, AH: A changed contents of the TL, TH and AH when instruction is executed. Symbols in the column indicate the following:
  - “-” indicates no change.
  - dH is the upper 8 bits of the data in the operation.
  - AL and AH must become the contents of AL and AH each prior to the instruction executed.
  - “00” becomes “00”.
- N, Z, V, C: An instruction of which the corresponding flag will change. If + is written in this column, the relevant instruction will change its corresponding flag.
- OP code: Code of an instruction. If an instruction is more than one code, it is written according to the following rule:  
e.g.: 48 to 4F ← This indicates 48, 49, ... 4F.

© FUJITSU LIMITED Printed in Japan

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).

#### **CAUTION:**

Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Control Law of Japan, the prior authorization by Japanese government should be required for export of those products from Japan.
