FIXED 2.5 AND 5 VOLT 3-TERMINAL VOLTAGE REFERENCES

ISSUE 4 - MARCH 1998

ZTR250
ZTR500

DEVICE DESCRIPTION

The ZTR250 and ZTR500 are precision three terminal references. These devices are ideal for battery powered applications where power saving is important. They offer low power alternatives to other two terminal shunt references.

The ZTR devices do not require an external resistor and, in contrast to two terminal references, waste none of the battery power as load current varies. The ZTR only consumes 30µA supply current.

The two devices require as low as 1.4 volts between input and output for regulation. Output voltage tolerance is ± 2.5%, with a voltage variation of 0.275mV/°C over the -55°C to 125°C operating range.

FEATURES

- Small outline SOT23 and SOT89 packages
- TO92 package
- 2.5V and 5V output
- 2.5% tolerance
- Supply current independent of input voltage over temperature
- Output current up to 50mA
- Very low supply current (30µA)
- Unconditionally stable
- Internal short circuit current limit

APPLICATIONS

- Battery Powered Systems
- Portable and Hand Held Equipment
- Instrumentation
- Metering

SCHEMATIC DIAGRAM

ABSOLUTE MAXIMUM RATINGS

Input Voltage	20V
Output current (I_O)	200mA
Operating temperature	-55 to 125°C
Storage temperature	-65 to 150°C

Power Dissipation (T_{amb}= 25°C, T_{jmax}=150 °C)

SOT23	500mW
TO92	600mW
SOT89	1.5W

Note:

1. The maximum operating input voltage and output current of the device will be governed by the maximum power dissipation of the selected package. Maximum package power dissipation is specified at 25 °C and must be linearly derated to zero at T_{amb}=125°C.

2. The following data represents pulse test conditions with junction temperatures as indicated at the initiation of the test. Continuous operation of the devices with the stated conditions might exceed the power dissipation limits of the chosen package.

3. This device does not contain a thermal shutdown circuit so care should be taken not to exceed the stated maximum power dissipation rating.Maximum power dissipation, for the SOT23 and SOT89 packages, is calculated assuming that the device is mounted on a ceramic substrate measuring 15 x 15 x 0.6mm.
