

- Pletronics LV96/LV98 Series is a quartz crystal controlled precision square wave generator with an LVDS output.
- Solder pad compatible legacy LVDS oscillator solutions.
- FR4 base using the LV93 or LV99 5x7 mm ceramic packaged SMD device.
- Tape and Reel packaging is available.

- 10.9 to 670 MHZ
- Enable/Disable Function: LV98 on pad 2 LV96 on pad 1
- Low Jitter

### This series, LV96 and LV98, is not recommended for new designs. Use LV93 or LV99 series for new designs .

# Pletronics Inc. certifies this device is in accordance with the RoHS 6/6 (2002/95/EC) and WEEE (2002/96/EC) directives.

Pletronics Inc. guarantees the device does not contain the following: Cadmium, Hexavalent Chromium, Lead, Mercury, PBB's, PBDE's Weight of the Device: 0.40 grams Moisture Sensitivity Level: 1 As defined in J-STD-020C Second Level Interconnect code: e4

### **Absolute Maximum Ratings:**

| Parameter                      | Unit                            |
|--------------------------------|---------------------------------|
| V <sub>cc</sub> Supply Voltage | -0.5V to +6.5V                  |
| Vi Input Voltage               | -0.5V to V <sub>cc</sub> + 0.5V |
| Vo Output Voltage              | -0.5V to V <sub>cc</sub> + 0.5V |

### **Thermal Characteristics**

The maximum die or junction temperature is 155°C The thermal resistance junction to board is 40 to 80°C/Watt depending on the solder pads, ground plane and construction of the PCB.

#### Layout and application information

For Optimum Jitter Performance, Pletronics recommends:

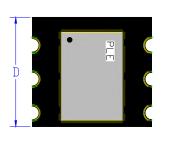

- a ground plane under the device
- no large transient signals (both current and voltage) should be routed under the device
- do not layout near a large magnetic field such as a high frequency switching power supply
- do not place near piezoelectric buzzers or mechanical fans.

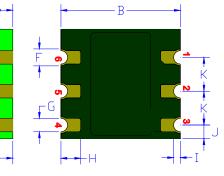

As much ground plane and thermal paths that can be realized under and to the side of the part is desired.
