

SP6852

Green-Mode Power Switch

DESCRIPTION

The SP6852 is a low cost, low startup current, current mode PWM controller with green-mode power-saving operation. Built-in 700V MOSFET provides simple design for adapter. The integrated functions include the leading-edge blanking of the current sensing, internal slope compensation. It would provide the users a superior AC/DC power application of higher efficiency, low external component counts, and lower cost solution for applications.

The SP6852 features more protections or functions for the following characteristics :

※Add OLP (Over Load Protection) function to provide better protection performance for fault conditions like short circuit or over load.

※Modify the OVP (Over Voltage Protection) mechanism from the cycle-by-cycle mode to the hiccup mode.

SP6852 is available in DIP-8P package.

PIN DESCRIPTION

Pin	Symbol	Description
1	Source	Power MOSFET Source
2	CS	Current sense. This pin senses the voltage across a resistor, to control PWM output. This pin also provides current amplitude information for current-mode control.
3	GND	Ground
4	RT	This current is used to charge an internal capacitor, to determine the switching frequency.
5	COMP	Voltage feedback. The pin provides the output voltage regulation signal, it provides feedback to the internal PWM comparator, so that the PWM comparator can control the duty cycle.
6	VCC	Supply Voltage in
7	Drain	Power MOSFET Drain
8	Drain	Power MOSFET Drain
