### Detailed technical data

#### Features

|                                              |                                                                                                            |
|----------------------------------------------|------------------------------------------------------------------------------------------------------------|
| <b>Measuring range</b>                       | -20 °C ... +80 °C                                                                                          |
| <b>Sensor element</b>                        | Pt1000, 2-wire, class A according to IEC 60751                                                             |
| <b>Output signals</b>                        | 1 x PNP + 4 mA ... 20 mA                                                                                   |
| <b>Switching output</b>                      | Transistor                                                                                                 |
| <b>Switching voltage</b>                     | Supply voltage [V DC] - 1 V DC                                                                             |
| <b>Maximum switching current</b>             | ≤ 250 mA                                                                                                   |
| <b>Switching delay</b>                       | 0 s ... 50 s, programmable                                                                                 |
| <b>Setting accuracy of switching outputs</b> | +0.1 °C                                                                                                    |
| Number                                       | 1                                                                                                          |
| Switching voltage                            | Supply voltage [V DC] - 1 V DC                                                                             |
| Maximum switching current                    | ≤ 250 mA                                                                                                   |
| Switching delay                              | 0 s ... 50 s, programmable                                                                                 |
| Setting accuracy of switching outputs        | +0.1 °C                                                                                                    |
| <b>Temperature offset</b>                    | ± 3 °C                                                                                                     |
| <b>Scaling of measuring range</b>            | Zero point: max. +25 % of span<br>Full scale: max. -25 % of span<br>Max. +25 % of span, max. -25 % of span |
| <b>Display</b>                               | 14-segment LED, blue, 4-digits, height 9 mm,<br>Display electronically turnable by 180 °, update: 200 ms   |
| <b>Rotatable housing</b>                     | Display against housing with electrical connection: 330 °<br>Housing against process connection: 320 °     |

#### Performance

|                                     |                                         |
|-------------------------------------|-----------------------------------------|
| <b>Accuracy of sensor element</b>   | ≤ ± (0.15 °C + 0.002  t ) <sup>1)</sup> |
| <b>Accuracy of switching output</b> | ≤ ± 0.8 % of span                       |
| <b>Display accuracy</b>             | ≤ ± 0.8 % of span ± 1 digit             |
| <b>Accuracy of analog output</b>    | ≤ ± 0.5 % of span                       |
| <b>Response time t<sub>50</sub></b> | ≤ 5 s <sup>2)</sup>                     |

<sup>1)</sup> |t| is the absolute value of the temperature in °C.

<sup>2)</sup> Depending on sensor configuration, according to IEC 60751.

|                                          |                          |
|------------------------------------------|--------------------------|
| <b>Response time <math>t_{90}</math></b> | $\leq 10 \text{ s}^{2)}$ |
|------------------------------------------|--------------------------|

<sup>1)</sup>  $|t|$  is the absolute value of the temperature in °C.

<sup>2)</sup> Depending on sensor configuration, according to IEC 60751.

## Mechanics/electronics

|                                            |                                                                                                                      |
|--------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| <b>Process connection</b>                  | Thread G ½ A according to DIN 3852-E                                                                                 |
| <b>Insertion length/diameter of probe</b>  | 150 mm / 6 mm                                                                                                        |
| <b>Seal</b>                                | NBR                                                                                                                  |
| <b>Wetted parts</b>                        | Stainless steel 1.4571 (AISI 316Ti)                                                                                  |
| <b>Maximum process pressure</b>            | $\leq 150 \text{ bar}^{1)}$                                                                                          |
| <b>Housing material</b>                    | Lower body: stainless steel 1.4301 (AISI 304)<br>Plastic head: PC + ABS<br>Input keypad: TPE-E<br>Display window: PC |
| <b>Enclosure rating</b>                    | IP65 (according to IEC 60529) <sup>2)</sup><br>IP67 (according to IEC 60529) <sup>2)</sup>                           |
| <b>Electrical connection</b>               | M12 round connector x 1, 4-pin                                                                                       |
| <b>Maximum ohmic load <math>R_A</math></b> | $\leq 100 \text{ k}\Omega$ (Switching outputs)<br>$< 0.5 \text{ k}\Omega$ (output signal 4 mA ... 20 mA)             |
| <b>Supply voltage</b>                      | 15 V DC ... 35 V DC                                                                                                  |
| <b>Maximum current consumption</b>         | 70 mA                                                                                                                |
| <b>Total current consumption</b>           | 570 mA (incl. switching current)<br>320 mA                                                                           |
| <b>Protection class</b>                    | III                                                                                                                  |
| <b>Insulation voltage</b>                  | 500 V DC                                                                                                             |
| <b>Overvoltage protection</b>              | 40 V DC                                                                                                              |
| <b>Short-circuit protection</b>            | Outputs $Q_A$ , $Q_1$ , $Q_2$ towards M                                                                              |
| <b>Reverse polarity protection</b>         | $L^+$ towards M                                                                                                      |
| <b>Electrical safety</b>                   |                                                                                                                      |

## SICK AT A GLANCE

SICK is one of the leading manufacturers of intelligent sensors and sensor solutions for industrial applications. A unique range of products and services creates the perfect basis for controlling processes securely and efficiently, protecting individuals from accidents and preventing damage to the environment.

We have extensive experience in a wide range of industries and understand their processes and requirements. With intelligent sensors, we can deliver exactly what our customers need. In application centers in Europe, Asia and North America, system solutions are tested and optimized in accordance with customer specifications. All this makes us a reliable supplier and development partner.

Comprehensive services complete our offering: SICK LifeTime Services provide support throughout the machine life cycle and ensure safety and productivity.

For us, that is “Sensor Intelligence.”
