## 1 Description

The **TTL-234X** cables are a family of USB to TTL serial UART converter cables incorporating FTDI's FT234XD USB to basic UART interface IC device which handles all the USB signalling and protocols. The cables provide a fast, simple way to connect devices with a TTL level serial interface to USB.

Each TTL-234X cable contains a small internal electronic circuit board, utilising the FT234XD, which is encapsulated into the USB connector end of the cable. The FT234XD datasheet, [DS\\_FT234XD](http://www.ftdichip.com), is available at <http://www.ftdichip.com>. The other end of the cable comes with a selection of different connectors supporting various applications – see Table 1.1

Cables are FCC, CE, RoHS compliant and are available at TTL levels of +5V and +3.3V.

Cables are available with either a 6-way SIL,0.1" pitch connector, a 3.5mm Audio Jack, an 8 way, keyed 2mm pitch connector (intended for use with VMUSIC2 or VDRIVE2), or bare, tinned wire ended connections (see Table 1.1)

The USB side of the cable is USB powered and USB 2.0 full speed compatible. Each cable is 1.8m long and supports a data transfer rate up to 3 Mbaud.

The TTL-234X cables require USB drivers, available free from <http://www.ftdichip.com>, which are used to make the FT234XD in the cable appear as a virtual COM port (VCP). This then allows the user to communicate with the USB interface via a standard PC serial emulation port (for example TTY). Another FTDI USB driver, the D2XX driver, can also be used with application software to directly access the FT234XD on the cable through a DLL. This is illustrated in the Figure 1.1

**Appendix A - Cable MTP MEMORY Configuration.** A user area of the internal MTP MEMORY is available to system designers to allow storing additional data. The internal MTP MEMORY descriptors can be programmed in circuit, over USB without any additional voltage requirement. It can be programmed using the FTDI utility software called [FT\\_PROG](#), which can be downloaded from FTDI Utilities on the FTDI website ([www.ftdichip.com](http://www.ftdichip.com)).

**Lower Operating and Suspend Current.** The FT234XD has a low 8mA operating supply current and a very low USB suspend current of approximately 125µA. (Note that during suspend mode, the current drawn by an application should not exceed 2.5mA to remain USB compliant)

**UART Pin Signal Inversion.** The sense of each of the four UART signals can be individually inverted by configuring options in the internal MTP MEMORY. For example CTS# (active low) can be changed to CTS (active high), or TXD can be changed to TXD#.

**Improved EMI Performance.** The TTL-234X cables is FCC and CE certified.

**Extended Operating Temperature Range -** The TTL-234X cables are capable of operating over an extended temperature range of -40° C to +85° C thus allowing them to be used in automotive or industrial applications.

## 7 TTL-234X-3V3-2mm Cable

The TTL-234X-3V3-2mm cable is terminated by an 8 way, 2mm pitch, Single-In-Line (SIL) keyed connector. The TTL-234X-3V3-2mm operates at +3.3V levels (signals only, VCC=+5V). These cables are primarily intended for interfacing the FTDI VDRIVE2 and VMUSIC2 modules.

Note that when connected to VDRIVE2 or VMUSIC2 module, the TTL-234X-3V3-2mm cable 8-way connector pin 1 connects to pin 8 of the module, and pin 8 of the cable connects to pin 1 of the cable.

USB Vendor ID (VID)	0403h	FTDI default VID (hex)
USB Product UD (PID)	6015h	FTDI default PID (hex)
Serial Number Enabled?	Yes	
Serial Number	See Note	A unique serial number is generated and programmed into the MTP MEMORY during device final test.
Pull down I/O Pins in USB Suspend	Disabled	Enabling this option will make the device pull down on the UART interface lines when the power is shut off (PWREN# is high).
Manufacturer Name	FTDI

Max Bus Power Current	90mA	
Power Source	Bus Powered	
Device Type	FT234XD	
USB Version	0200	Returns USB 2.0 device description to the host. Note: The device is a USB 2.0 Full Speed device (12Mb/s) as opposed to a USB 2.0 High Speed device (480Mb/s).
Remote Wake Up	Disabled	
Load VCP Driver	Enabled	Makes the device load the VCP driver interface for the device
Invert TXD	Disabled	Signal on this pin becomes TXD# if enable.
Invert RXD	Disabled	Signal on this pin becomes RXD# if enable.
Invert RTS#	Disabled	Signal on this pin becomes RTS if enable.
Invert CTS#	Disabled	Signal on this pin becomes CTS if enable.

**Table 0.1 Default Internal MTP MEMORY Configuration**

The internal MTP MEMORY in the cable can be re-programmed over USB using the utility program [FT\\_PROG](#). FT\_PROG can be downloaded from the [www.ftdichip.com](http://www.ftdichip.com). Version 2.8a or later is required for the FT234XD chip. Users who do not have their own USB Vendor ID but who would like to use a unique Product ID in their design can apply to FTDI for a free block of unique PIDs. Contact FTDI support for this service.
