(Note: V_{EE} must be $\leq V_{SS}$)
- * Break-Before-Make Switching Eliminates Channel Overlap.
- * Linearized Transfer Characteristics
- * Implement an DP4T Switch Effectively.
- * Pin to Pin Replacement for CD4052

Notes: 1. Data of "TYP" is intended as an indication of the IC's potential performance.

2. For voltage drops across the switch (ΔV_{SW}) > 600mV (> 300mV at high temperature), excessive V_{DD} current may be drawn, i.e. the current out of the switch may contain both V_{DD} and switch input components. The reliability of the device will be unaffected unless the Maximum Ratings are exceeded.
